

Question 1

Requesting additional information, is it possible to provide the annual volume for each of your sites?

Answer 1

CMHC does not have exact total annual consumption breakdowns available, as tenants have previously been responsible for paying directly for their own oil. CMHC has received consumption information from several tenants to provide an idea of annual usage. Based on the information available the approximate average consumption was 2700 litres, with a range of 2116 to 3500 litres. As indicated on the tender, approximately 3-7% of units are vacant at a given time, with the thermostats set at 15 degrees and no hot water usage.
