This amendment 003 is raised to answer the following questions:

**Q.1**

6.9 The engineered space between the rail and aluminum housing must be filled with a black neoprene material to provide a flush floor appearance and prevent debris from collecting thus affecting carriage movement.

This is a proprietary item. Some manufacturers may have a very wide space that may require closing this space. We do not. Also, covers inhibit cleaning and can in fact interfere with proper operation.

**A.4**

**DELETE:**

6.9 The engineered space between the rail and aluminum housing must be filled with a black neoprene material to provide a flush floor appearance and prevent debris from collecting thus affecting carriage movement.

**INSERT:**

6.9 There must be a flush floor appearance between the rail and aluminum housing.

**Q.2**

9.12 All mobile carriages must be fitted with full length solid stress proof steel drive shafts connecting all wheels on the drive side of the carriage with couplings.

We use superior hollow shaft drive shaft. Can you add hollow as acceptable?

**A.2** No.

**Q.3** Please confirm if the "back stop" is to be the total height ie. 72 inches of the shelving or if a standard 2-3 inch back stop is satisfactory.

**A.3** Back stop is intended to prevent items from moving from one side to the other, so the manufacturer's standard partial-height back stop is acceptable.

**Q.4**

Section 13.3

I understand that no dividers for the shelf itself, but do we need to provide the 2 dividers per post to provide the flush condition? In other words, delete section 13.3 also?

**A.4.** Yes, delete section 13.3.

**Q.5** Do you require back to back shelving or full depth?

**A.5** Back to back with the backstop in between.

**All other terms and conditions remain unchanged.**
