This amendment 04 is raised to answer the following question:

**Q1.** Could I get a follow up on Amendment 3 Q.2

Montel uses a 1 5/16" diam. hollow shaft (5/16" th.) with 11 773 lbs-in torque compared to 7854 lbs-in torque for competitors 1 inch shaft.

I was wondering if you could look into this again. As a Canadian manufacturing company, we strive to compete on the Canadian and international markets by offering our clients a superior technology at lower cost compared with an inferior mass produced option. Having to modify our manufacturing process back to technologies we have discarded many years ago (such as the welded carriages and solid shafts) impacts our costs and competitiveness.

We are constantly having to ask to modify specifications that were written to exclude our products when we have a clear equivalent or superior technology to offer.

**A1.** We can accept that hollow shaft.

**All other terms and conditions remain unchanged.**
