AMENDMENT 002

This amendment is raised to publish questions and answers.

Question 1: Because they are asking for the rope to have both a minimum and a maximum break strength (MBS) of 499 Kilonewtons (KNs) which is nearly impossible. Can they provide us with an acceptable break strength range? In the past awarded contracts for this rope (CAN/CGSB-1 40.20-2008) they always seem to ask for a larger diameter than what the break strength requires, followed by bidders asking if they can use a smaller diameter as an alternate, however, this is the first time they have listed both a minimum and a maximum break strength as the same number. Can you clarify this for me? It would even be better if they could provide the diameter of the rope they are currently using/replacing.

Answer 1: A rope with a diameter between 34 mm and 41 mm with a MBS of 492 to 499 is acceptable.

Question 2: Please clarify the statement under “Supplementary Features”: “Minimum Breaking Strength 499 Kilonewtons (112,180lbs) is not to be exceeded” What is meant by “not to be exceeded”? It is normal to request that the MBS not be lower than the requirement, but it is unusual to request that it not be exceeded.

Answer 2: See answer 1.

All other terms and conditions remain the same.
