Questions and Answers

- Q1. The buried hydro on the West side, is it copper or aluminium? Is it in a conduit or direct buried cable (teck)? How many conductors?
- A1. We do not have as-built drawings of the utilities for this site, therefore we do not know if it is copper or aluminium. We believe it is 4 wire with no conduit but, ultimately the Contractor will be responsible for management of utilities on the site. The Contractor will need to determine how to deal with power issues through utility locates and temporary disconnection of power as per the spec.
- Q2. Will there be an extension of the closing date?
- A2. An extension to the closing will not be granted.
