Requisition No.: EZ897-170083/A
Tender Closing Date & Time: June 17th, 2016 @ 1400 P.D.T.
Project Description: Sikanni Remediation & Building Relocation
– Sikanni Maintenance Camp, Alaska Highway, BC

KN

Q1: Can sieve results be provided by PWGSC for the granular material proposed for use as backfill from the Sikanni Chief Maintenance yard?

A1: A sieve analysis for the Contractor's off-site supplied backfill material is not being provided. The material must meet the compaction requirements and be inspected, stamped and sealed by the Contractor's geotechnical engineer.

Q2: Also can the location of the onsite fill material be provided in a drawing? Need to determine the amount of clearing required. Need to know if there any access issues to get to material.

A2: Very minimal to no clearing or grubbing will be required. Fill material locations are generally accessible and not restricted.

Q3: Also as site meeting did not include a visit to the Man and Beast site can a drawing be provided detailing the location within the pit where the material will be derived from? The amount of clearing/grubbing required at the man and beast pit? Are there any piles to be moved at the man and beast pit?

A3: Clearing and grubbing is not required to access material and piles are not required to be moved. Material will be accessed from existing stockpiles.

Q4: Will non-potable water be made available from a PWGSC pumping station at the Sikanni River?

A4: Water will not be provided by PWGSC.

Q5: Section 31 23 33.01 paragraph 1.4.6 indicates that all backfill is provided "free of charge" from the Site and the Man and Beast Pit, however, cost item 15 in the Base Work, and 17 in the Optional Work indicate "procurement" is required. Please clarify.

A5: Section 31 23.33.01 3.8 details the three types of backfill. The procurement in line items noted are for off-site imported material supplied by the Contractor.

Q6: Section 31 23 33.01, paragraph part 2 3.3.3. indicates that TSS analysis is not required, however, treatment is required. Please confirm if analysis of TSS is required prior to discharge.

A6: Section 01 35 13.43 1.8 details the testing requirements. The section noted details the comparison of results to guidelines, where applicable. TSS analysis must be conducted and <100mg/L as detailed in Section 03 35 13.43 1.8.4.

Q7: Section 02 61 00 paragraph Part 2 - 2.1.4 states that the maximum stockpile height is 2.0 m. Based on the biocell dimensions in Drawing 3, and volume estimates, the biocell will exceed 2.0 m in height. Please confirm that this is acceptable.

A7: The intent is that the soil is spread evenly across the biocell, not mounded and at least level with the berms to facilitate drainage.

Q8: Please provide excavation detail on cross sections Drawing 5 and 6.

A8: Section 31 23 33.01 1.7 excavation designs are required submittals by the Contractor.

Q9: Please provide remedial excavation contours on Drawing 4 so that steep slopes are identified. Please confirm that excavation support is not required.

A9: Section 31 23 33.01 1.7 excavation designs are required submittals by the Contractor.

Q10: Does the remedial excavation extend to bedrock? If so, does the bedrock surface need cleaning? If so – what methods are acceptable?

A10: If bedrock is encountered during the excavation, excavator scraping to remove soil and as accepted by the Departmental Representative.

Q11: Section 02 61 00.01 indicates that water cannot be discharged from the treatment system until laboratory results indicate adequate treatment of each separate batch. Once the system performance is confirmed by lab results of the initial batch, can continuous discharge occur with intermittent monitoring? If so – how often would monitoring samples be required?

A11: Section 01 35 13.43 1.9.8 follow-up sampling to confirm treated water quality is at the discretion of the Departmental Representative and will be dependent on volume of water treated.

Q12: Can you please confirm that the superintendent / Field Coordinator #2 has to be a direct employee of the bidding entity and not a subcontractor?

A12.) The superintendent / Field Coordinator #2 can be either a direct employee of the bidding entity or a subcontractor.

Q13: Is the tender winning contractor required to add PWGSC as Additional Insured with respect to the contractors Fixed Site Pollution Liability policy or is PWGSC requesting that the contractor place Fixed Site Pollution Liability insurance on the project site for the duration of the project or a 12 month period?

A13: Please refer to page 2 of Annex A – Certificate of Insurance in the Invitation To Tender document.

All other terms and conditions remain unchanged.
