

MORE QUESTIONS & ANSWERS

Q5. What kind of diffusion cell is acceptable for the study?

A5. The static and flow-through diffusion cells are both acceptable.
The choice of the test system should be justified on a substance-specific basis in the study proposal.

Q6. Under MT6, it is not always possible to provide study details such as the name of the specific substance or project sponsor due to reasons of confidentiality. Similarly detailed protocols cannot be provided. Is listing of studies or protocols/SOPs enough to demonstrate the experience?

A6. The information provided should be verifiable. A brief description of the study along with appropriate references and/or published citations must be provided. Listing of protocols/SOPs is not enough. Sufficient details must be provided enabling proper assessment of their compliance with test guidelines and applicability to the substances listed.
