Transfer Station Building Project

Background:

The Transfer Station Building was built in 1989 and over time the structure has sustained damage to a point that major repairs are required.

Objective:

The objective of this project is to repair the vehicle doors, front building cladding and loading chute. Once completed this work will help reduce the amount of garbage that is carried by the wind into the transfer stations grounds.

Scope of Work:

1. South Building face remediation including doors
2. Garbage chute remediation
3. Garbage Trailer bay door remediation

Contractor's Responsibilities:

The Contractor must have and maintain a current Parks Canada business license.

Term of Contract:

Contract to start upon award and be completed no later than September 29, 2016.
