The information being provided is to illustrate the model that exists for business processes and information exchange within the Performance Based Contracting (PBC) solution for the Department of National Defence. The information is provided to facilitate an understanding of the business architecture and the solution architecture that exist for the PBC program. The content is not intended to reflect the end state specifications for all of the PBC EIE related services.

## 1 Introduction

This document defines a complete list of configuration items and their versions in the EIE Technical Services domain to be included in Navy Request For Proposal (RFP) packages.

This list of configuration items match the Canada EDE baseline **TECHSERVICES-2015-11-17**

Each service in the business domain is independent and stand-alone with all configuration items delivered in one package. It is important to understand that the services do not share any technical artifacts in a runtime mode. For example – even though two services both use a technical artifact called “Time.xsd” the version of “Time.xsd” used by each service may be different.

Thus the unit of configuration item for a Technical Services Service is the individual service itself as defined in section [Technical Services](#)

### 1.1 Change List

This section identifies which services in the Technical Services business domain have changed since the previous release.

- **Addition of Service Specifications**

*Note1: The configuration items changed in this release are identified using **bold format** in the tables containing the list of configuration items.*

*Note2: Going forward the course grained configuration items will be at the level of the services as grouped in section [Technical Services](#)*

## 2 Business Process Catalogue

There is no business process catalogue for Technical Services.

## 3 Business Use Cases

There are no business use cases for Technical Services.

## 4 Technical Services

Technical services have been divided into sub-sections. Each sub-section contains a list of the relevant Service Specifications, Operational Model, and Technical Artifacts for the service. Each service and its list of configuration items is independent of any other service.

### 4.1 Specification and Model Documents

<b>DeadMessage_Specification-External</b>	<b>2.4</b>
---	------------

**The technical runtime artefacts will only be shared following the awarding of the contract and at the appropriate design/implementation gate as per the contract milestones.**

**The information being provided is to illustrate the model that exists for business processes and information exchange within the Performance Based Contracting (PBC) solution for the Department of National Defence. The information is provided to facilitate an understanding of the business architecture and the solution architecture that exist for the PBC program. The content is not intended to reflect the end state specifications for all of the PBC EIE related services.**

## 5 Known Issues

There are no known issues with the Technical Services business domain at the current time.

## 6 Document History

<b>Revision Number</b>	<b>Description</b>	<b>Date</b> (YYYY-MM-DD)
1.0	Delivery of TECHSERVICES-2015-09-28 baseline	2015-09-28
1.1	Update to TECHSERVICES-2015-11-17 baseline	2015-11-17

The information being provided is to illustrate the model that exists for business processes and information exchange within the Performance Based Contracting (PBC) solution for the Department of National Defence. The information is provided to facilitate an understanding of the business architecture and the solution architecture that exist for the PBC program. The content is not intended to reflect the end state specifications for all of the PBC EIE related services.
