RFP 20160058

Question #1

In regards to M.6: Would OSFI please consider amending this requirement to allow bidders to demonstrate how their tool is perfectly compatible with Logiterm? We work with SDL Trados Studio, which is perfectly compatible with LogiTerm.

Answer #1

M6 remains unchanged. The requirement for Logiterm is based on interoperability requirements. While other translation software may be compatible with Logiterm, a full threat and risk assessment would need to be done to ensure that there are no issues with interoperability. As OSFI does not have capacity to take on this assessment at this time, the requirement remains unchanged.
