This Amendment is raised to provide the following clarification:

Question 1. Do you have a drill profile showing the depth of installation for the drilling part of this contract? Also any geotechnical information showing the ground conditions that are expected to be encountered with the drilling? We would require this information to decide if we are interested in bidding on this project.

Answer 1. Piezometer 1 was installed to a depth of 2.95 m below ground elevation. Piezometer 2 was installed to a depth of 2.58 m below ground elevation. For further geotechnical conditions refer to the geotechnical letter dated 11 April 2016 in Appendix B of the Specifications. For further evaluation of geotechnical conditions, four test pits will be opened during the optional site visit along the alignment of the proposed forcemain to the depth of the new forcemain installation. This will be done to observe the subsurface material that will be encountered, sloughing conditions and rate of infiltration. The pits will be left open for a very short period of time (15-20 minutes) and backfilled immediately. Conditions will be documented and video recorded. Proposed locations are noted in the figure below.
