Joint CBRN GSR – RFP, Amendment 016

This amendment is raised to modify and update the JOINT CBRN GEN. SERVICE RESPIRATOR, Solicitation No. W8476-155141/C, dated 23 June 2016

QUESTION 2:

T&C
3.1 Section IV

Please clarify the number of hard copies since Appendix CA, article 2.3 specifies 6 hard copies for each of acquisition and ISS?

ANSWER:

For the purpose of Annex C evaluations, the bidder must deliver 6 hard copies of the Proposal. Each Proposal must include the mandatory requirements as outlined in Annex C – Appendix CA.

QUESTION 74:

Annex C
Appendix CF
Section 1.1.1.

Annex C Appendix CF states, section 1.1.1. states ““Achievement Period” means the period commencing on 13 November, 2015 and ending 4 years after date of the Contract award;”, This should be changed to reflect the date of the initial LOI which was 18 May 2012.

ANSWER:

The applicability of the ITB policy to this procurement was announced on 13 November, 2015. This is the date on which the ITB Achievement Period begins, as defined at Annex C – Appendix CC - Acquisition ITB Terms and Conditions article 1.1.1.

QUESTION 93:

Annex C
ITB & VP submission

There is a discrepancy between the requirements for the number of documents to be provided for the ITB & VP Section. The main Bid submission document states 2 hardcopies but Annex C states 6 hardcopies.

ANSWER:

For the purpose of Annex C evaluations, the bidder must deliver 6 hard copies of the Proposal. Each Proposal must include the mandatory requirements as outlined in Annex C – Appendix CA.

QUESTION 139:

Appendix FJ – Test Plan Summary,

From the start of the text up to and including Table 1

Canada identified potential conflict (when a failure is identified) between Appendix FJ Test Plan Summary and Annex A, Appendix AA – Systems Requirements Specification.

ANSWER:

The answer will be release in amendment 017 to follow.

QUESTION 140:

A follow up to Amendment 013, Question 79

A late change within a test method used in a mandatory requirement can jeopardize the ability of Industry to prove their compliance at time of bid closing date. The testing and its associated costs may have already been undertaken with an external laboratory using the original test method. Furthermore, the answer to question 79 published in amendment 005 confirmed the flow rate and the test method for CK testing were to remain the same. Can you please explain why does the test method suddenly change in amendment 13 for CK testing? To be fair with every bidders, the Crown should at least accept both methods as Industry has already undertaken external testing to be compliant at bid closing date and to prevent Industry to request another extension. Can you please amend Question 79 accordingly?

ANSWER:

The test method was changed in Amndt 013 from what was confirmed in Amndt 005. Upon reflection, after Amndt 005 was published, Canada identified that the current standard is pulsating flow and not linear flow. However, due to testing that bidders may have already undertaken Canada is prepared to accept either the pulsating or linear flow for JCG-SRS-1318 and JCG-SRS-1045.

In Annex A – Acquisition Statement of Work, APPENDIX AA - System Requirements Specification at page A-AA- 63/272 for JCG-SRS-1318 and at page A-AA- 64/272 for JCG-SRS-1045, the following sentence needs to be replaced for both statements, in the column “Verification Criteria”:

DELETE:

b. Airflow 0.83 dm³/s (50 l/min) having a pulsating pattern characterized by 24 half sine waves of 2.08 dm³ each followed by an equal period of standstill, per minute;

INSERT:

b. Flow rate of not less than 50 +/- 1 L/min; **OR** Airflow 0.83 dm³/s (50 l/min) having a pulsating pattern characterized by 24 half sine waves of 2.08 dm³ each followed by an equal period of standstill, per minute.

And

In Annex F - Appendix FD - Phase 2A and Phase 2B - Technical Paper Evaluation Compliance Matrix” for JCG-SRS-1318 at line 23, and for JCG-SRS-1045, line 24, in column E “Instructions to Bidder” the following sentence needs to be replaced for both statements.

DELETE:

b. Airflow 0.83 dm³/s (50 l/min) having a pulsating pattern characterized by 24 half sine waves of 2.08 dm³ each followed by an equal period of standstill, per minute;

INSERT:
