This solicitation amendment #006 is raised to modify solicitation EW699-171068 dated 2016-08-23 as follows:

1) The following Questions and Answers were posed during the solicitation period:

Q1: With regard to construction of the winter section between the Ekati and Lupin mines which falls under the TCWR JV Land Use Permit, are there any current permit holder driven requirements with respect ice engineering oversight or QC protocols that we will be required to follow.

For clarity, we have heard anecdotally that the current permit holder has a stated requirement for 3rd party ice engineering prior to granting a permit for use following construction.

If so, please provide this information or a draft copy of the permit?

A1: There is no reference in the licence to "ice engineering oversight". GNWT publishes "Guidelines for Safe Ice Construction" that is available online in which requirements for ice engineering and QC protocols are discussed.

Q2: Regarding the lead painted AST's we have been asked to clean, cut and store the remains on site as part of the scope. Would PWGSC consider allowing the purging and cleaning of the tanks, then and leaving them intact as an acceptable alternative to cutting.

A2: No. Lead painted AST's to be dismantled and staged onsite as per 02 81 01.

ALL OTHER TERMS AND CONDITIONS SHALL REMAIN THE SAME.
