This amendment 002 is being raised to answer questions that came up at the site visit from potential bidders as follows:

Question 2. What is the footprint of the existing housekeeping pad that the compressors sit on?

Answer 2. 40 ½" deep X 101" long

Question 3. What are the physical openings of the elevator?

Answer 3. Elevator door opening is 41" wide X 83" high. The floor area measures approx. 63" deep X 77" long

Question 4. The length of the wires that presently feed the 2 transformers is not long enough for the new disconnect switches that take the place of the transformers.

Answer 4. Please reference photographs "A, B & C"

- The wire feeding transformer # 2 is sufficient in length and can be reused for bottom entry disconnect switch #2. Adjust height of disconnect switch to match length of cable.
- The wire feeding transformer # 1 is too short (photograph "B"). Remove and replace Teck cable piece of electrical feed for transformer #1 and replace with new EMT conduit from junction box under slab (photo "C") to new disconnect switch #1 following original route of original Teck cable. Use old junction box under slab as a pull box with no splices. Approximate length of wire required is _88 feet_ from MCC#4 to new disconnect switch #1 (drawing #1). Firestop floor penetration where EMT passes through slab.

Question 5. What areas require painting?

Answer 5. Reference photograph "A", paint wall behind compressors and the housekeeping pad (area inside the arrows and down to the floor level shall receive a fresh coat of paint. Make good all surfaces damaged during course of installation before painting and match existing products and colours (paint manufacture PPG / Pitt-Tech paint)
