## AMENDMENT 001

- 1) At page 10 of 45 of Part 6 – Resulting contract clauses, under **6.4.1 Period of the contract**;

### ADD:

**Note: The Work is to be performed before September 1, 2017.  
Commissioning must be completed to the client's satisfaction at the latest 4 months after the beginning of the work.**

- 2) Under **Annex A – Requirement**, at point **2.9 Cartes à puce sans contact**;

### DELETE ENTIRELY

### REPLACE BY :

#### 2.9 Smart Card Access Cards

The contractor must provide 2 500 contactless smart cards. The 13.56 MHz contactless smart card access cards must provide mutual authentication between card and reader, encrypted data transfer and a minimum of 64-bit diversified keys for read/write capability. The contactless cards must meet ISO standards for thickness for use with direct image and thermal transfer printers and be available in 32k bit (4K Byte) memory configurations.

- 3) Under **Annex A – Requirement**, at point **2.17 Training**;

### ADD:

The Contractor shall provide CSA with at least one video recording in MP4 or equivalent format (readable on a Windows system) of each module/topic of training delivered to make it possible to consult them as required at a later date."

- 4) Under **Annex D – Mandatory technical criteria**, at point **1.1 Contractor's Experience**;

### DELETE:

1.1.3 Have experience with Maxivox's communication system MaxiComm II.

5) See questions and answers associated below :

**QUESTION 1 :**

1. General

1.1 Objective

The system must also provide and integrate an intercom system.

Is this software integration or input/output integration. (some of the best of breed unified security platform (video, access and intrusion) solutions providers software do not support software integration of the specified intercom system)?

**ANSWER 1 :**

This is not an issue for the CSA. If the contractor prefers to integrate input/output rather than integrating a software, there's no problem. What matters is that the integration between the intercom system and the security system works well.

**QUESTION 2 :**

1. MANDATORY TECHNICAL CRITERIA

1.1 *Contractor's experience*

1.1.3 Have experience with Maxivox's communication system MaxiComm II.

Was your intention to make this a mandatory criteria, even though it's not integral to the primary requirement for a unified video/intrusion/intrusion solution? This requirement may have the unintended consequence of eliminating many companies who are well positioned to supply to your predominant need, but who do not have a relationship with the specified intercom system (which is not a ubiquitous product and not widely deployed in Canada).

Can you reconsider this, and not make it a mandatory requirement?

**ANSWER 2 :**

See point 4 of the amendment 001 of the present request for proposal.

CCC No./N° CCC - FMS No./N° VME

---

**QUESTION 3 :**

Point 2.9 : You're asking that "the cards must be available in 2K bit (256 byte), 16k bit (2K Byte) or 32k bit (4K byte) memory configurations". These cards have different costs. Can you specify the exact model of access card to be provided?

**ANSWER 3 :**

The contractors must bid for access cards 32k bit (4K byte).  
See point 2 of the amendment 001 of the present request for proposal.

**QUESTION 4 :**

Point 2.1 : You're asking that the access control units (ACUs) must support at least four (4) card readers. Do you accept that a UCA controller can have multiple submodules with 2 readers?

**ANSWER 4 :**

No, the objective is to limit the space required for the installation of controllers.

*All other terms and conditions remain unchanged.*
