This amendment 002 is raised to answer questions raised by the industry as follow:

- Q.4 :** Your panel types request knock outs for power in the panel base raceway. Our knock outs are in the base elements and this allows for the power to be under or above the work surface by simply turning the element around. Would this be acceptable?
- A.4 :** Yes, as long as we have access to cabling and electrical components without having to remove work surface.
- Q.5 :** In the cases where open panel types are required, we can offer a metal perforated element to allow for air flow. These elements can also accommodate knock outs for power and data. This solution is cleaner and more aesthetically pleasing. Would this be acceptable?
- A.5 :** Yes, as long as we have access to cabling, electrical components and heating elements without having to remove work surface and that the cabling is not visible through the perforations.
- Q.6 :** Panel Type B asks for the fabric element to be 50"h. This is not on the SA. Will you be revising the specification for this panel type or will you be issuing a revision (version 4) to the RFP which would allow us to quote non-SA product?
- A.6 :** It specifies **APPROX.** 50"h does not have to be exact. It could be a few inches smaller or higher as long as the panel does not exceed 54"h in total.

All other Terms and Conditions remain unchanged.
