---

Amendment number 1 to solicitation W8486-163152/B is raised to answer the following questions:

**Question 1:**

We need information/clarification regarding the product specification numbers on Annex A. The current information doesn't tell us what the product is.

Answer:

The specifications listed provide the information regarding the product being solicited. For example, Def Stan 91-34 Issue 3 is for a sea water resisting grease meeting the requirements outlined in this specification. This requirement is for product meeting UK Defence Standard 91-34 Issue 3, and holding current technical approval from the UK Ministry of Defence. Only products with this approval will be considered. Information on product compliance and how to obtain this is detailed in each specification.

**Question 2:**

I see the lubricants must be up to defence standard. Are you able to provide a more descriptive product specification for the four lubricants required? That way we can make sure we are recommending the most accurate product required in our bid.

Answer:

Same answer as for question 1.

**Question 3:**

Lines 110 and 111 of annex A mention Def Stan 91-22 which is a 40 grade motor oil. I have been able to find a copy of this defense standard but unfortunately I cannot find the qualified product list anywhere. In note 5 it says that this list is published by a company called Intertek in a document called "technically acceptable product list". I have contacted Intertek several time by phone and email and no one has been able to supply this list. The most they have done is pointed me towards a website where you can search for their different documents but no combination of search terms have yielded any results. Would it be possible to get a copy of this list from you?

Answer:

The UK Ministry of Defence manages the Technically Acceptable Products List (TAPL). They are not published on-line or available publicly. A potential supplier must go through the UK Ministry of Defence to obtain this status and a copy of the letter granting Technical Approval. For a product to qualify as OMD-113 it must meet the requirements of the Defence Standard (91-22) and also pass an Institute of Naval Medicine approval to ensure that there are no compounds present in the oil formulation that could cause harm to people in a submarine environment. This is achieved by the formulation and data sheets for the finished product and each component being sent for assessment. Regarding the Defence Standard testing, this can be carried out by the laboratory of the company wanting their product approved or by a third party laboratory. It is suggested that before a company starts any testing that they contact the technical authority for the product. Contact information is available in the standard. Once the approval data is complied, the technical authority has the final say if the product is suitable for approval. It is then added to the TAPL and the list is reviewed regularly.
