

Question 3

Demarcation in the data centers

- Is there a specific Meet-Me Room (MMR) where we would hand off to CMHC network in each of these locations?
- To support no Single Point of Failure, would it be acceptable to have demarcs in different MMRs on different floors in the DC?

Answer 3

Yes, for diversity purposes the circuits can be delivered in separate MMR at the Data Center locations as long as they can be crossed-connected to our cabinets using the standard facility cabling options (Fiber or Copper).
