Question 2

Mandatory technical criteria (M1), the bidder have a minimum of five years clinical experience working full time as an RRT in the last ten years or an equivalent number of hours in part-time work as a RRT in the last ten years. Am I correct in understanding that as a full time employee, working 40 hours/week x 52 wks/year=2080 hours/year. 2080 x 5 years=10,400 hours. If part-time hours=10,400 within the last 10 years, would this meet the criteria? I would have worked a total of 10,816 hours in the last 10 years, which would exceed the 10,400 full time hours in 5 out of the last 10 years.

These hours come from 2 different companies that I worked for, so would not exceed the 2 resources they mention. I'm still not sure though, about the wording "Each of the resources must have a minimum of five years clinical experience working full time in the last ten years"?

Answer 2

One year of full-time work hours is calculated as follows: (5 days per week x 52 weeks per year) (minus 10 days statuary holiday) (minus 15 days' vacation) = 235 days @ 7.5 hours = 1,762.50 hours

Five years of full time work = 1762.50 x 5 = 8,812.50 hours.

Therefore, an individual who has worked 10,816 hours in the last 10 years, would meet the M1 criteria, as 10,816 is more than 8,8125.50

Le travail à temps plein est calculé comme suit: (5 jours par semaine x 52 semaines par année) (moins 10 jours de vacances statutaires) (moins 15 jours de vacances) = 235 jours à 7,5 heures = 1 762,50 heures

Cinq ans de travail à temps plein = 1762,50 x 5 = 8 812,50 heures.

Par conséquent, un individu qui a travaillé 10,816 heures au cours des 10 dernières années, répondrait aux critères M1, puisque 10 816 est supérieur à 8 8125,50.
