***Soil Sampling Program (Draft), Caraquet Small Craft Harbour, Gloucester
County, New Brunswick, DFRP No.04933; RPIS No. MS 02528; SCH No. 2528***

We are pleased to provide this draft soil sampling program report for the Caraquet
Small Craft Harbour, Gloucester County, New Brunswick.

We trust this meets your present needs. If you have any questions, please feel free to
contact us at (506) 444-8820 at your convenience.

Yours truly,

DILLON CONSULTING LIMITED

EXECUTIVE SUMMARY

Dillon Consulting Limited (Dillon) was retained by Public Works Government Services Canada (PWGSC) to complete a soil sampling program at the Department of Fisheries and Oceans Canada - Small Craft Harbour (DFO-SCH) in Caraquet, Gloucester County, New Brunswick (SCH No. 02528; DFRP No. 04933)

Ten soil samples and one duplicate sample were collected by Dillon personnel from the Caraquet SCH and submitted to Maxxam Analytics Inc. (Maxxam) in Bedford, Nova Scotia for select chemical analysis in soil, including polycyclic aromatic hydrocarbons (PAHs), metals and metalloids, benzene, toluene, ethylbenzene, and xylenes (BTEX) and petroleum hydrocarbons, polychlorinated biphenyls (PCBs), sodium absorption ratio, conductivity, pH, and soil grain size.

To identify future disposal requirements, the analyzed soil samples were compared to the following:

- Loggies Pit Dredge Material Acceptance Criteria (2016);
- Canadian Council of Ministers of the Environment (CCME) Soil Quality Guidelines (SoQGs) for the Protection of Environment and Human Health in agricultural, residential/parkland, and commercial/industrial applications;
- CCME Canada-Wide Standards (CWS) for Petroleum Hydrocarbons (PHC) in Soil;
- The Atlantic PIRI Tier I Risk-Based Screening Levels (RBSLs) for BTEX and mTPH;
- The Atlantic PIRI Tier I Soil Ecological Screening Levels (ESLs) for BTEX and mTPH;
- Nepisiguit-Chaleur Solid Waste Commission Screening Limits;
- Health Canada Drinking Water Quality Guidelines; and
- CCME Water Quality Guidelines (Protection of Aquatic Life and Agriculture).

The Nova Scotia Guidelines for Disposal of Contaminated Solids in Landfills presented in analytical data tables (**Tables D-3 and D-7; Appendix D**) are for reference only.

The analytical results indicate that the soil did not exceed the applicable screening criteria for BTEX and petroleum hydrocarbons; PAHs; PCBs; metals or metalloids. However, exceedances of several guidelines were identified for pH and sodium absorption ratio in soil, as well as concentrations of leachable PAHs (exceeding the CCME Water Quality Guidelines protective of

freshwater aquatic life) and metals (exceeding the CCME Water Quality Guidelines: Protection of Freshwater Aquatic Life; CCME Water Quality Guidelines: Protection of Agriculture (Irrigation or Livestock); and Health Canada's Drinking Water Quality Guidelines). A summary of exceedances is presented in **Table E.1**.

1.0 INTRODUCTION

At the request of Public Works and Government Services Canada (PWGSC), Dillon Consulting Limited (Dillon) completed a soil sampling program at the Department of Fisheries and Oceans Canada - Small Craft Harbour (DFO-SCH) in Caraquet, Gloucester County, New Brunswick (SCH No. 02528; DFRP No. 04933). The purpose of this program was to characterize the approximately 5610 m³ of fill material (height: 2 m; length: 165 m; and width: 17 m) that is anticipated to be removed during upcoming reconstruction activities.

2.0 SOIL SAMPLING PROGRAM – DILLON 2016

2.1 Methodology

On October 28, 2016, a drilling program was conducted to assess soil conditions at Wharf 405 on the subject property. Lantech Drilling Services Inc. (Lantech) of Dieppe, NB, under the supervision of Conquest Engineering Ltd. (Conquest) installed 6 boreholes (BH16-1 to BH16-6), to depths of 2.7 m below ground surface (m bgs). The drilling program was conducted as part of Conquest's geotechnical investigation of the subject property. Borehole locations are presented on **Figure 1** in **Appendix A**.

Continuous split-spoon soil samples, collected at 0.6 m intervals, were recovered from each borehole/monitor well until sufficient depth had been achieved. Dillon field personnel logged subsurface conditions encountered in the boreholes at the time of sampling. Stratigraphic information is presented on the borehole logs presented in **Appendix B**. Soil samples were placed in laboratory supplied containers and stored in a cooler with ice. Terra Core disposable field samplers provided by the laboratory were used to measure the correct volume of soil to fill specific laboratory supplied 40 ml vials pre-charged with methanol preservation. VOC concentration measurements were obtained from the headspace of each of the recovered soil samples, at room temperature, using an Eagle Gas detector meter with methane elimination, and calibrated to hexane. Based on field observations, including the headspace readings, select soil samples from the borehole were submitted for laboratory analysis.

Site photographs as well as photographs from the soil sampling program are presented in **Appendix C**.

2.2 Laboratory Analytical Program

Following sample collection, select samples were submitted to Maxxam Analytics Inc. (Maxxam) in Bedford, Nova Scotia for analyses. Maxxam is an international standard ISO/IEC 17025 accredited laboratory certified by the Standards Council of Canada. The soil samples were analyzed for the following parameters:

- Benzene, toluene, ethylbenzene, xylenes (BTEX) and modified total petroleum hydrocarbons (mTPH);
- Polycyclic aromatic hydrocarbons (PAHs) low level analysis;
- ICP 23 full metals scan (available metals/nitrogen peroxide digest for land based disposal options);
- Sodium Absorption Ratio;
- Conductivity;
- pH;
- Polychlorinated biphenyls (PCBs); and
- Grain size distribution.

To identify future disposal requirements, the analyzed soil and leachate samples were compared to the following:

- Loggies Pit Dredge Material Acceptance Criteria (2016);
- Canadian Council of Ministers of the Environment (CCME) Soil Quality Guidelines (SoQGs) for the Protection of Environment and Human Health in agricultural, residential/parkland, and commercial/industrial applications;
- CCME Canada-Wide Standards (CWS) for Petroleum Hydrocarbons (PHC) in Soil;
- The Atlantic PIRI Tier I Risk-Based Screening Levels (RBSLs) for BTEX and mTPH;
- The Atlantic PIRI Tier I Soil Ecological Screening Levels (ESLs) for BTEX and mTPH;
- Nepisiguit-Chaleur Solid Waste Commission Screening Limits;
- Health Canada Drinking Water Quality Guidelines; and

- CCME Water Quality Guidelines (Protection of Aquatic Life and Agriculture).

The Nova Scotia Guidelines for Disposal of Contaminated Solids in Landfills presented in analytical data tables (**Tables D-3 and D-7; Appendix D**) are for reference only.

3.0 ANALYTICAL RESULTS

The analytical results of the soil samples obtained from Wharf 405 of the Caraquet SCH are summarized below for those parameters that have established regulatory guidelines. Analytical result tables are provided in **Appendix D**. The complete set of analytical results, laboratory QA/QC and certificates of analyses are provided in **Appendix E**.

3.1 BTEX and Petroleum Hydrocarbon Concentrations

The laboratory and analytical results are provided in **Table D-1 (Appendix D)** and the laboratory certificates of analysis are provided in **Appendix E**.

BTEX, petroleum hydrocarbon and mTPH concentrations identified in the analyzed soil samples (including the field and laboratory duplicates) do not exceed the applicable screening criteria.

3.2 Metal and Metalloid Concentrations

3.2.1 Soil

The laboratory and analytical results are provided in **Table D-2 (Appendix D)** and the laboratory certificates of analysis are provided in **Appendix E**.

Metal and metalloid concentrations identified in the analyzed soil samples do not exceed the applicable screening criteria.

3.2.2 Leachate

The laboratory and analytical results are provided in **Table D-3** (TCLP) and **D-4** (SPLP) (**Appendix D**) and the laboratory certificates of analysis are provided in **Appendix E**.

Concentrations of leachable metals or metalloids (SPLP analysis) exceeding the applicable screening criteria were identified in the following soil samples:

CCME Water Quality Guidelines – Protection of Freshwater Aquatic Life:

- BH16-02-SA1: copper and iron;
- BH16-03-SA1: iron;
- BH16-03-SA3: iron;
- BH16-04-SA1: iron;
- BH16-04-SA3: iron and lead;
- BH16-05-SA1: arsenic, copper, iron and lead;
- BH16-06-SA1: iron and lead; and
- BH16-06-SA4: arsenic, copper, iron and lead

CCME Water Quality Guidelines – Protection of Agriculture (Irrigation or Livestock):

- BH16-05-SA1: aluminum (irrigation and livestock) and iron (irrigation); and
- BH16-06-SA4: aluminum (irrigation and livestock) and iron (irrigation).

Health Canada's Drinking Water Quality Guidelines:

- BH16-02-SA1: iron;
- BH16-03-SA1: iron;
- BH16-03-SA3: iron;
- BH16-04-SA1: iron;
- BH16-04-SA3: iron;
- BH16-05-SA1: iron and manganese;
- BH16-06-SA1: iron; and
- BH16-06-SA4: iron and manganese.

3.3 Sodium Absorption Ratio, Conductivity and pH

The laboratory and analytical results are provided in **Table D-2 (Appendix D)** and the laboratory certificates of analysis are provided in **Appendix E**.

The sodium absorption ratio in soil samples BH16-02-SA1 and BH16-06-SA4 exceeded the CCME SoQGs for an Agricultural or Residential/Parkland land use scenario. Sodium absorption ratios ranged from 2.4 to 12.

With the exception of BH16-02-SA1, the soil samples analyzed exhibited pH levels below the acceptable range of 6 to 8. The pH levels ranged from 4.9 to 6.2.

The conductivity of soil samples collected did not exceed applicable screening criteria. Conductivity levels ranged from 150 to 1,400 $\mu\text{S}/\text{cm}$.

3.4 PCB Concentrations

The laboratory and analytical results are provided in **Table D-5 (Appendix D)** and the laboratory certificates of analysis are provided in **Appendix E**.

PCB concentrations identified in the analyzed soil samples do not exceed the applicable screening criteria.

3.5 PAH Concentrations

3.5.1 Soil

The laboratory and analytical results are provided in **Table D-6 (Appendix D)** and the laboratory certificates of analysis are provided in **Appendix E**.

PAH concentrations identified in the analyzed soil samples do not exceed the applicable screening criteria.

3.5.2 Leachate

The laboratory and analytical results are provided in **Table D-7 and D-8 (Appendix D)** and the laboratory certificates of analysis are provided in **Appendix E**.

Pyrene leachate (SPLP) concentrations from soil sample BH16-02-SA1 exceed the CCME Water Quality Guidelines for the Protection of Freshwater Aquatic Life. The remaining PAHs in leachate (TCLP or SPLP) do not exceed the applicable screening criteria.

3.6 Grain Size

The laboratory analytical results (**Appendix E**) for grain size analysis indicate that the analyzed soil samples are coarse-grained.

4.0 CONCLUSIONS

The analytical results indicate that the soil did not exceed the applicable screening criteria for BTEX and petroleum hydrocarbons; PAHs; PCBs; metals or metalloids. However, exceedances of several guidelines were identified for pH and sodium absorption ratio in soil, as well as concentrations of leachable PAHs (exceeding the CCME Water Quality Guidelines protective of freshwater aquatic life) and metals (exceeding the CCME Water Quality Guidelines: Protection of Freshwater Aquatic Life; CCME Water Quality Guidelines: Protection of Agriculture (Irrigation or Livestock); and Health Canada's Drinking Water Quality Guidelines). A summary of the exceedances is presented below in **Table 1**.

5.0 CLOSURE

This report was prepared exclusively for the purposes, project, and site location(s) outlined in the report. The report is based on information provided to, or obtained by Dillon Consulting Limited ("Dillon") as indicated in the report, and applies solely to site conditions existing at the time of the site investigation(s). Although a reasonable investigation was conducted by Dillon, Dillon's investigation was by no means exhaustive and cannot be construed as a certification of the absence of any contaminants from the site(s). Rather, Dillon's report represents a reasonable review of available information within an agreed work scope, schedule and budget. It is therefore possible that currently unrecognized contamination or potentially hazardous materials may exist at the site(s), and that the levels of contamination or hazardous materials may vary across the site(s). Further review and updating of the report may be required as local and site conditions, and the regulatory and planning frameworks, change over time.

This report was prepared by Dillon for the sole benefit of Public Works and Government Services Canada and Fisheries and Oceans Canada. The material in it reflects Dillon's best judgment in light of the information available to it at the time of preparation. Any use which a third party makes of this report, or any reliance on or decisions made based on it, are the responsibilities of such third parties. Dillon accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report.

This report was prepared by Amanda Rietze, G.I.T. The report was reviewed by Shawn Forster, M.Eng., P.Eng and Sean Hanlon, P.Eng.

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025:2005 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported: unless indicated otherwise, associated sample data are not blank corrected.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods. Results relate to samples tested.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) Soils are reported on a dry weight basis unless otherwise specified.

(2) Sample filtered in laboratory prior to analysis for dissolved metals.

(3) Sodium Adsorption Ratio is not accredited.

(4) No lab extraction date is given for C6-C10/BTEX and VOC samples that are field preserved with methanol. Extraction date is date sampled unless otherwise stated.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	2.3°C
-----------	-------

Revised Report- Changed sample IDs for SPLP Samples. HM Nov 15/16

Sample DJC899 [BH16-03 SA3] : Method Deviation Comment: Reduced sample weight used for leachate procedure due to insufficient sample. All extraction ratios maintained. Minimal impact on sample data quality.

Sample DJC901 [BH16-04 SA3] : SAR Analysis: NC = Not Calculable as Calcium and Magnesium were not detected.

Sample DJC904 [BH16-06 SA1] : Method Deviation Comment: Reduced sample weight used for leachate procedure due to insufficient sample. All extraction ratios maintained. Minimal impact on sample data quality.

Sample DJC905 [BH16-06 SA4] : Method Deviation Comment: Reduced sample weight used for leachate procedure due to insufficient sample. All extraction ratios maintained. Minimal impact on sample data quality.

Results relate only to the items tested.

N/A = Not Applicable

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

Leachate Blank: A blank matrix containing all reagents used in the leaching procedure. Used to determine any process contamination.

QC Standard: A sample of known concentration prepared by an external agency under stringent conditions. Used as an independent check of method accuracy.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

Surrogate: A pure or isotopically labeled compound whose behavior mirrors the analytes of interest. Used to evaluate extraction efficiency.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spiked amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than 2x that of the native sample concentration).

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (one or both samples < 5x RDL).

(1) VPH samples were extracted using a flat-bed shaker instead of the accelerated mechanical shaker due to matrix incompatibility.

(2) Poor RPD due to sample inhomogeneity. < 10 % of compounds in multi-component analysis in violation.

(3) Duplicate %RPD violation not applicable. Absolute % Difference within 10%.

(4) Elevated RDL(s) due to detected levels in the leachate blank.

(5) Low level lab contamination. Minimal impact on data quality.

(6) Poor RPD due to sample inhomogeneity. Insufficient sample for repeat extraction.

VALIDATION SIGNATURE PAGE

The analytical data and all QC contained in this report were reviewed and validated by the following individual(s).

Eric Dearman, Scientific Specialist

Rosemarie MacDonald, Scientific Specialist (Organics)

Maxxam has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per section 5.10.2 of ISO/IEC 17025:2005(E), signing the reports. For Service Group specific validation please refer to the Validation Signature Page.
