**By Road, from the OTTAWA International Airport**

1. From the airport take the AIRPORT PARKWAY to RIVERSIDE DR EAST
2. Follow RIVERSIDE DR EAST to HIGHWAY 417 EAST
3. Take HIGHWAY 417 EAST, past the ST-LAURENT BLVD exit, where HIGHWAY 417 splits, continue LEFT on HIGHWAY 174 (ROCKLAND)
4. Exit HIGHWAY 174 on BLAIR RD NORTH
5. Proceed on BLAIR RD NORTH, cross OGILVIE RD, and continue on to the traffic lights at the intersection of BLAIR and MONTREAL RD
6. Turn left onto MONTREAL RD and take the first immediate right onto the ramp leading down to the traffic circle. Stop at Building M-1 on the north side of the traffic circle. Ask the commissionaires in M-1 for directions to the NRC building, institute or staff member you seek.

**By Road, from MONTRÉAL**

1. Take MÉTROPOLITAIN 40 WEST and follow signs for OTTAWA and HIGHWAY 417 WEST
2. Follow 417 WEST to reach OTTAWA
3. Exit at HIGHWAY 174 EAST (ROCKLAND) when entering OTTAWA
4. Follow 174 EAST and exit at BLAIR RD NORTH (first exit after entering 174 EAST)
5. Follow BLAIR RD NORTH, cross OGILVIE RD, and continue on to the traffic lights at the intersection of BLAIR and MONTREAL RD
6. Turn left onto MONTREAL RD and take the first immediate right onto the ramp leading down to the traffic circle. Stop at Building M-1 on the north side of the traffic circle. Ask the commissionaires in M-1 for directions to the NRC building, institute or staff member you seek.

\$ \_\_\_\_\_ in lawful money of Canada  
(excluding GST/HST)

End of Appendix 1

## Project # 5378: M2 Washrooms Renovation Project (phase 2) / Project # 5379: M59 Washrooms Renovation Project

### Appendix 2 - Additional conditions

---

#### **1. Hours of construction work**

- 1.1 Contractors must ensure that all work (all disciplines included) deemed to be noisy, disruptive to the building occupants or that can cause vibration must be done after regular business hours. The remaining portions of the work can be done during the regular business hours.
- 1.2 Contractors must ensure to estimate adequately the extent of the after-hours work.
- 1.3 Contractors must carry the after-hours work at his / her expenses.

#### **2. Sequence of the work**

##### **2.1 Building M2**

###### **2.1.1 Room 124**

2.1.1.1 This room is the first one to be renovated. All work to be done in regard to room 124 must be 100% completed before the contractor can start the work in building M59.

##### **2.2 Building M59**

###### **2.1.1 Room 115**

2.1.1.1 This room is the second one to be completed. All work in this room must 100% completed before the work can start elsewhere in building M59.

###### **2.1.2 Rooms 104, 105, 106, 107, 128 and 129**

2.1.2.1 All work related to those areas can be completed at the same time.

## 2.3 General

2.3.1 Contractors must take into consideration that both buildings are Research and Testing Facilities and in such he / she may have to leave specific areas of work or the site during testing periods. These testing periods' times and durations are unknown and the project team can be notice only a few hours or at the beginning of such type of tests.

## 3. Extent of the work

- 3.1 Abatement Contractor must include all costs related to the required removal of the concrete slabs and or trenching. All sub trades are to identify the extent of the work in advance for the Abatement Contractor.
- 3.2 Bidders do not have to supply the following products: both types of partitions for the washrooms and shower stalls, lockers and lighting fixtures (1' x 4' and 2' x 2' only, other lighting fixtures will have to be provided by the winning bidder as specified in the contractual documents).
- 3.3 The winning bidder will be responsible to assemble both kinds of partitions and install them at all locations, assemble and install lockers at all locations and install the provided lighting fixtures where specified in the contractual documents.
- 3.4 Some of the partitions will have to be install in room 124 of the building M2 and the remaining partitions are to be installed in building M59. The winning bidder will be responsible of the transportation of the lockers, partitions and lighting fixtures at the different locations where they will need to be installed as per the contractual documents.
- 3.5 The labor required to assemble the lockers, partitions and lights that are already pre-purchased for this project will have to be covered in the overall warranty period of this project. The shop drawings for both types of partitions will be provided to the winning bidder in order to proceed with the assembly.

## Formulaire de proposition – Marché de construction

**Titre du projet** 5378-M2 et 5379-M59 - Projet de rénovation des salles de bain  
(phase 2)

**No. de Proposition:** 17-22019

### 1.2 Nom d'entreprise et adresse du soumissionnaire

Nom \_\_\_\_\_

Adresse \_\_\_\_\_

Personne-ressource (nom en lettres moulées) \_\_\_\_\_

Téléphone (\_\_\_\_\_) \_\_\_\_\_ Téléc. (\_\_\_\_\_) \_\_\_\_\_

### 1.3 Offre de prix

Le soumissionnaire soussigné offre par les présentes à Sa Majesté du chef du Canada (ci-après appelée « Sa Majesté »), représentée par le Conseil national de recherches du Canada, d'exécuter et d'achever les travaux se rapportant au projet désigné ci-haut, conformément aux plans et devis et aux autres documents d'appel d'offres, à l'endroit et de la manière énoncés aux présentes, pour un montant total de \_\_\_\_\_, \_\_\_\_\_ \$ (montant numéraire uniquement) **dans la monnaie ayant cours légal au Canada (TPS/TVH en sus).**

Le montant de l'offre comprend toutes les taxes fédérales, provinciales et municipales applicables<sup>(\*)</sup>. Cependant, si l'une des taxes imposées en vertu de la *Loi sur l'accise*, de la *Loi sur la taxe d'accise*, de la *Loi sur la sécurité de la vieillesse*, de la *Loi sur les douanes*, du tarif des douanes ou de toute autre loi provinciale imposant une taxe de vente au détail sur les achats de biens meubles incorporés à un bien immobilier est modifiée et que cette modification survient :

- .1 après que la présente proposition ait été mise à la poste ou livrée; ou
  - .2 si la présente proposition est révisée, après la dernière révision;
- le montant de l'offre de prix devra être diminué ou augmenté de la manière prévue à l'article CG22 des Conditions générales du contrat.

---

National Research Council Canada	Conseil national de recherches Canada
Administrative Services & Property management Branch (ASPM)	Direction des services administratifs et de la gestion de l'immobilier (SAGI)

---

### **1.3.1 Offre de prix (suite)**

(\*) Dans le cadre de la présente proposition, la taxe sur les produits et services (TPS) n'est pas une taxe applicable.

Dans la province de Québec, la taxe de vente du Québec (TVQ) ne doit pas être ajoutée au montant de l'offre, le gouvernement fédéral étant exempté de la TVQ. Les soumissionnaires doivent s'adresser directement au ministère du Revenu provincial pour récupérer toute taxe qu'ils sont appelés à verser sur des biens et services acquis dans le cadre de l'exécution du présent marché. Les soumissionnaires devraient cependant inclure dans le montant de leur offre de prix tout montant de TVQ pour lequel ils ne peuvent exiger un remboursement de taxe sur les intrants.

### **1.4 Acceptation et conclusion du marché**

Le soumissionnaire soussigné s'engage, dans les quatorze (14) jours suivant l'avis confirmant l'acceptation de la présente proposition, à signer un contrat portant sur l'exécution des travaux, à condition que l'avis d'acceptation du Ministère parvienne au soumissionnaire dans un délai de trente (30) jours suivant la date de clôture de l'appel d'offres.

### **1.5 Délai d'exécution des travaux**

Le soumissionnaire soussigné s'engage à achever les travaux dans le délai stipulé au devis, lequel commence à courir à compter de l'avis d'acceptation de la présente proposition.

### **1.6 Garantie de soumission**

Le soumissionnaire soussigné joint à la présente proposition une garantie de soumission, conformément à l'article 5 des Instructions générales à l'intention des soumissionnaires.

Le soumissionnaire soussigné convient que dans l'éventualité où il refuse de conclure un contrat qu'il est tenu de conclure en vertu des présentes, tout dépôt de garantie fourni à titre de garantie de soumission sera retenu pour débit. Cependant, le Ministre peut, au nom de l'intérêt public, renoncer au droit de Sa Majesté de retenir pour débit le dépôt de garantie.

Le soumissionnaire soussigné convient que si la garantie de soumission n'est pas conforme aux modalités de l'article 5 des Instructions générales à l'intention des soumissionnaires, sa proposition peut être jugée irrecevable.

---	---

---

### **1.7 Garantie d'exécution**

Dans les quatorze (14) jours suivant l'avis d'acceptation de sa proposition, le soumissionnaire soussigné doit fournir une garantie d'exécution contractuelle, conformément à la section F, Conditions contractuelles, du contrat.

Le soumissionnaire soussigné convient que la garantie d'exécution visée par les présentes, si elle est fournie sous forme de lettre de change, sera versée au Trésor public du Canada.

### **1.8 Annexes**

L'annexe n°           n/a           fait partie intégrante de la présente proposition.

### **1.9 Addenda**

Le montant total de l'offre de prix porte sur l'exécution des travaux définis dans les addenda suivants :

N°	DATE	N°	DATE

**(Les soumissionnaires doivent indiquer le numéro et la date des addenda.)**

## ANNONCE ACHATSETVENTES

### 5378-M2 et 5379-M59 - Projet de rénovation des salles de bain (phase 2)

Ce projet consiste à rénover plusieurs salles de bain et salles de douche situées dans les édifices M2 et M59 du Conseil national de recherches Canada situé au 1200, chemin Montréal à Ottawa. Les disciplines suivantes sont incluses dans ce projet et sont décrites ci-dessous : Architecture, Mécanique, Électricité, Décontamination et Structure. Les espaces touchés par ces rénovations sont les suivants: 124 dans l'édifice M2 et 104, 105, 106, 107, 115, 128 et 129 dans l'édifice M59.

#### Étendu des travaux architecturaux:

L'étendu des travaux inclus les éléments suivants mais ne s'y limite pas;

- Travaux de démolition,
- Construction de nouveaux murs,
- Modernisation des plafonds, murs, planchers, accessoires de salle de bain, partitions, comptoirs, douches et portes.

#### Étendu des travaux mécaniques:

L'étendu des travaux inclus les éléments suivants mais ne s'y limite pas;

- Travaux de démolition,
- Modernisation des équipements de plomberie (toilettes, urinoirs, lavabos et drains de plancher).
- Modifications des systèmes de CVAC, de la tuyauterie et des drains sanitaires.

#### Étendu des travaux électriques:

L'étendu des travaux inclus les éléments suivants mais ne s'y limite pas;

- Travaux de démolition,
- Modernisation des appareils d'éclairage,
- Modifications de l'éclairage d'urgence, des détecteurs de chaleur, des capteurs de mouvements, des alarmes à feu, des prises électriques, des interrupteurs, des contrôles et de la signalisation des sorties d'urgences,
- Installation d'opérateurs de portes, de blocs d'alimentation d'urgence, de prises DDFT et de ventilateurs d'extraction.

#### Étendu des travaux structuraux:

L'étendu des travaux inclus les éléments suivants mais ne s'y limite pas;

- Modification de la dalle de béton.

#### Étendu des travaux de décontamination:

L'étendu des travaux inclus les éléments suivants mais ne s'y limite pas;

- Référence aux dessins et spécifications.

## **1. GENERAL :**

Adresser à le représentant ministériel (ou à son représentant) ou à l'Agent des contrats toute question portant sur tout aspect du projet. Ils sont les seuls autorisés à fournir des réponses.

On ne tiendra nullement compte des informations obtenues d'une personne autre que le représentant ministériel (ou son représentant) ou l'Agent des contrats et ce, autant à l'octroi du contrat qu'au cours des travaux.

Les entreprises souhaitant présenter des soumissions pour ce projet devraient obtenir les documents relatifs aux appels d'offres en s'adressant au fournisseur de service Achatsetventes.gc.ca AGAO. Si des addenda sont ajoutés, ils seront distribués par Achatsetventes.gc.ca AGAO. Les entreprises qui choisissent de préparer leurs soumissions en se fondant sur des documents d'appel d'offres provenant d'autres sources le font à leurs propres risques et seront tenues d'informer le responsable de l'appel d'offres de leur intention de soumissionner. Les trousse d'appel d'offres ne pourront être diffusées le jour même de la clôture des soumissions.

## **2. . VISITE DU SITE OBLIGATOIRE**

Les soumissionnaires ont l'obligation de participer à une des visites du site à la date et à l'heure prévues. Les soumissionnaires qui ont l'intention de présenter une soumission doivent envoyer au moins un représentant à cette visite.

Les visites de chantier se tiendront le 6 juin et le 8 juin, 2017 à **9 :00**. Rencontrer Janik Leroux à l'édifice M-2, 1200 chemin Montréal, Ottawa, ON. Les soumissionnaires qui, pour une raison quelconque, ne peuvent pas participer à la visite à la date et à l'heure prévues ne pourront obtenir un deuxième rendez-vous; leur soumission sera donc considérée comme non conforme. **AUCUNE EXCEPTION NE SERA FAITE.**

Pour prouver qu'ils ont participé à la visite du site, les soumissionnaires ou leurs représentants DOIVENT signer, lors de la visite, le formulaire de participation élaboré par l'autorité contractante. Les soumissionnaires ou leurs représentants ont la responsabilité de vérifier s'ils ont bien signé ce formulaire avant de quitter le site. Les soumissions présentées par des soumissionnaires qui n'ont pas participé à la visite du site ou qui ont oublié de signer le formulaire de participation seront considérées comme non conformes.

## **3. DATE DE FERMÉTURE :**

La date de fermeture est le 29 juin, 2017 14 :00

## **4. RÉSULTATS DE L'APPEL D'OFFRES :**

À la fermeture de l'appel d'offres, les résultats de l'appel d'offre seront envoyés par télécopieur à tous les entrepreneurs qui auront soumis un appel d'offre.

## **5. CRITÈRES DE SÉCURITÉ OBLIGATOIRES POUR LES ENTREPRENEURS**

### **5.1 EXIGENCES OBLIGATOIRES RELATIVES A LA SECURITE**

- .1 L'entrepreneur doit détenir en permanence, pendant l'exécution du contrat à commandes, une attestation de vérification d'organisation désignée (VOD) en vigueur, délivrée par la Direction de la sécurité industrielle canadienne (DSIC) de Travaux publics et Services gouvernementaux Canada (TPSGC).**

- .2 Les membres du personnel de l'entrepreneur devant avoir accès à des établissements de travail dont l'accès est réglementé doivent TOUS détenir une cote de FIABILITÉ en vigueur, délivrée ou approuvée par la DSIC de TPSGC.
- .3 L'entrepreneur doit respecter les dispositions:
  - a) de la Liste de vérification des exigences relatives à la sécurité et directive de sécurité (s'il y a lieu), reproduite à l'Annexe D;
  - b) du Manuel de la sécurité industrielle (dernière édition)@ <http://ssi-iss.tpsgc-pwgsc.gc.ca/msi-ism/msi-ism-fra.html>

## 5.2 VÉRIFICATION DE L'ATTESTATION DE SÉCURITÉ À LA CLÔTURE DES SOUMISSIONS

- .1 Le soumissionnaire doit détenir une attestation de vérification d'organisation désignée (VOD) en vigueur, délivrée par la Direction de la sécurité industrielle canadienne (DSIC) de Travaux publics et Services gouvernementaux Canada (TPSGC) **ET DOIT L'INCLURE AVEC LEUR SOUMISSION OU FAIRE SUIVRE DANS LES 48 HEURES SUIVANT LA DATE ET L'HEURE DE CLÔTURE DE L'APPEL D'OFFRE.** Des vérifications seront effectuées par l'intermédiaire de la DSIC pour confirmer l'attestation de sécurité du soumissionnaire. L'omission de se conformer à cette exigence rendra la soumission non conforme et celle-ci sera rejetée.
- .2 L'entrepreneur général doit nommer tous ses sous-traitants dans un délai de 72 heures suivant la clôture des soumissions, et ceux-ci doivent aussi détenir une attestation VOD valide et soumettre les noms, dates de naissance ou numéros de certificats de sécurité de toutes les personnes qui seront affectées au projet.
- .3 Il faut noter que les sous-traitants qui doivent exécuter des tâches pendant l'exécution du contrat subséquent doivent aussi satisfaire aux exigences obligatoires du contrat en matière de sécurité. De plus, aucune personne ne possédant pas le niveau de sécurité exigé ne sera admise sur le site. Le soumissionnaire retenu devra s'assurer que les exigences liées à la sécurité sont satisfaites pendant toute l'exécution du contrat. La Couronne ne sera tenue responsable d'aucun retard ni d'éventuels coûts supplémentaires liés à l'inobservation par l'entrepreneur des exigences en matière de sécurité. L'omission de satisfaire à ces exigences sera suffisante pour résilier le contrat pour cause d'inexécution.
- .4 Pour toute question concernant les exigences liées à la sécurité pendant la période de soumission, les soumissionnaires doivent communiquer avec l'agente de sécurité @ 613-993-8956.

## 6.0 CSPAAT (COMMISSION DE LA SECURITE PROFESSIONNELLE ET DE L'ASSURANCE CONTRE LES ACCIDENTS DU TRAVAIL

- .1 Tous les soumissionnaires doivent fournir une attestation de la CSPAAT valide avec leur offre ou avant l'attribution du contrat.

## 7.0 L'OMBUDSMAN DE L'APPROVISIONNEMENT

- .1 Services de règlement des différends  
Les parties reconnaissent que l'ombudsman de l'approvisionnement nommé en vertu du paragraphe 22.1(1) de la *Loi sur le ministère des Travaux publics et des Services gouvernementaux* veillera à proposer aux parties concernées un processus de règlement de leur différend, sur demande ou consentement des parties à participer à

un tel processus de règlement extrajudiciaire en vue de résoudre un différend entre elles au sujet de l'interprétation ou de l'application d'une modalité du présent contrat, et obtiendra leur consentement à en assumer les coûts. Le Bureau de l'ombudsman de l'approvisionnement peut être joint par téléphone, au 1-866-734-5169 ou par courriel, à l'adresse [boa.opo@boa-opo.gc.ca](mailto:boa.opo@boa-opo.gc.ca).

**.2 Administration du contrat**

Les parties reconnaissent que l'ombudsman de l'approvisionnement nommé en vertu du paragraphe 22.1(1) de la *Loi sur le ministère des Travaux publics et des Services gouvernementaux* examinera une plainte déposée par [*le fournisseur ou l'entrepreneur ou le nom de l'entité à qui ce contrat a été attribué*] concernant l'administration du contrat si les exigences du paragraphe 22.2(1) de la *Loi sur le ministère des Travaux publics et des Services gouvernementaux* et les articles 15 et 16 du *Règlement concernant l'ombudsman de l'approvisionnement* ont été respectées, et si l'interprétation et l'application des modalités ainsi que de la portée du contrat ne sont pas contestées. Le Bureau de l'ombudsman de l'approvisionnement peut être joint par téléphone, au 1-866-734-5169 ou par courriel, à l'adresse [boa.opo@boa-opo.gc.ca](mailto:boa.opo@boa-opo.gc.ca).

**.3 Le Bureau de l'ombudsman de l'approvisionnement (BOA) a été mis sur pied par le gouvernement du Canada de manière à offrir aux fournisseurs un moyen indépendant de déposer des plaintes liées à l'attribution de contrats de moins de 25 000 \$ pour des biens et de moins de 100 000 \$ pour des services. Vous pouvez soulever des questions ou des préoccupations concernant une demande de soumissions ou l'attribution du contrat subséquent auprès du BOA par téléphone, au 1-866-734-5169 ou par courriel, à l'adresse [boa.opo@boa-opo.gc.ca](mailto:boa.opo@boa-opo.gc.ca). Vous pouvez également obtenir de plus amples informations sur les services qu'offre le BOA, en consultant son site Web, à l'adresse [www.opo-boa.gc.ca](http://www.opo-boa.gc.ca).**

Le représentant ministériel responsable ou son représentant: Janik Leroux  
Téléphone: 613 223-6252

L'autorité contractante : Alain Leroux [alain.leroux@nrc-cnrc.gc.ca](mailto:alain.leroux@nrc-cnrc.gc.ca)  
Téléphone : 613 993-2274

## INSTRUCTIONS AUX SOUMISSIONNAIRES

### Article 1 - Réception des soumissions

- 1a) Aucune soumission reçue après le moment fixé pour la clôture des soumissions ne sera acceptée. LES SOUMISSIONS RECUES APRES LE MOMENT FIXÉ NE SONT PAS VALIDES et ne peuvent être prises en considération, peu importe la raison de leur retard.
- 1b) Une lettre ou une télécommunication imprimée envoyée par un soumissionnaire pour signifier un prix ne peut être considérée comme étant une soumission valide à moins qu'une soumission officielle n'ait été reçue sur la formule prescrite à cette fin.
- 1c) Il est loisible aux soumissionnaires de modifier leurs soumissions par lettre ou télécommunication imprimée mais à condition que de telles modifications ne soient pas reçues plus tard qu'au moment prévu pour la clôture des soumissions.
- 1d) Les modifications à la soumission qui sont transmises par télécopieur doivent être signées et doivent permettre d'identifier sans équivoque le soumissionnaire.

Toutes les modifications de ce genre doivent être envoyées à :

Conseil national de recherches Canada  
Services d'approvisionnement  
Alain Leroux, agent supérieur de contrats  
Édifice M-22  
Chemin Montréal, Ottawa (Ontario)  
K1A OR6

Télécopieur: (613) 991-3297

### Article 2 - Formule de soumission et qualifications

- 1) Toutes les soumissions doivent être présentées sur la formule de soumission - construction et être signées en conformité avec les exigences suivantes:
  - a) Société à responsabilité limitée : le nom complet de la société ainsi que le nom et le titre des fondés de signature autorisés doivent être imprimés dans l'espace prévu à cette fin. La signature des fondés de signature et le sceau de la société doivent être apposés.
  - b) Société de personne : le nom de l'entreprise ainsi que le(s) noms du (des) signataire(s) doivent être imprimés dans l'espace prévu. L'un ou plusieurs des associés doivent signer en présence d'un témoin qui, lui aussi, doit apposer sa signature. Un sceau de couleur adhésif doit être apposé en regard de chaque signature.
  - c) Entreprise à propriétaire unique : le nom de l'entreprise et le nom du propriétaire unique doivent être imprimés dans l'espace prévu. Le propriétaire est tenu de signer en présence d'un témoin qui doit lui aussi apposer sa signature. Un sceau de couleur adhésif doit être apposé en regard de chaque signature.
- 2) Toute modification à la partie imprimée de la formule de soumission - construction ou tout défaut de fournir l'information qui y est demandée peut invalider la soumission.
- 3) Toutes les rubriques de la formule de soumission - construction doivent être remplies et les corrections manuscrites ou dactylographiées apportées aux parties ainsi remplies doivent être paraphées par la ou les personnes qui signe(nt) la soumission au nom du soumissionnaire.

- 4) Les soumissions doivent être basées sur les plans, devis et documents de soumission fournis.

### Article 3 - Contrat

- 1) L'entrepreneur devra signer un contrat semblable à la formule standard pour contrats de construction à prix fixe dont un exemplaire en blanc est annexé dos à la présente brochure pour information.

### Article 4 - Destinataire de la soumission

- 1a) Les soumissions doivent être envoyées sous enveloppe cachetée adressée à l'Agent de contrats, **Conseil national de recherches, Services administratifs et gestion de l'immobilier, édifice M-22, 1200 chemin Montréal, Ottawa, ON. K1A 0R6** Canada, et la mention "Soumission relative à (inscrire le titre de travail apparaissant sur les dessins et le cahier des charges)" ainsi que le nom et l'adresse du soumissionnaire doivent apparaître sur l'enveloppe.
- 1b) Sauf dispositions contraires, les seuls documents à soumettre pour la soumission sont la formule de soumission et la garantie de soumission.

### Article 5 - Garantie

- 1a) La garantie de soumission est requise. La garantie doit alors être soumise sous l'une ou l'autre des formes suivantes :
- i) un chèque certifié payable au Receveur général du Canada et tiré sur un établissement membre de l'Association canadienne des paiements ou un établissement de crédit coopératif local membre d'une société centrale de crédit coopératif elle-même membre de l'Association canadienne des paiements OU
  - ii) des obligations du gouvernement du Canada, ou des obligations avec garantie inconditionnelle par le gouvernement du Canada quant au capital et aux intérêts, OU
  - iii) un cautionnement de soumission.
- 1b) Peu importe la forme de la garantie de soumission, elle ne devrait jamais dépasser la somme de 250 000 \$ calculée à 10% de la première tranche de 250 000 \$ du prix soumissionné, plus 5% de tout montant dépassant 250 000 \$.
- 2a) Une garantie de soumission doit être fournie avec chaque soumission. Elle peut aussi être envoyée séparément à condition qu'elle ne soit pas reçue plus tard qu'au moment prévu pour la clôture des soumissions. On doit fournir l'ORIGINAL de la garantie de soumission. Des garanties transmises par télécopieur ou des photocopies NE SONT PAS acceptées. **DEFAUT DE FOURNIR LA GARANTIE REQUISE RENDRA LA SOUMISSION INVALIDE.**
- 2b) Dans le cas où la soumission n'est pas acceptée, la garantie de soumission fournie en conformité avec l'article 8 sera retournée au soumissionnaire.
- 3a) L'adjudicataire doit fournir une garantie au plus tard 14 jours après réception d'un avis lui signifiant l'acceptation de sa soumission. Il doit fournir L'UN OU L'AUTRE des documents suivants :
- i) Un dépôt de garantie tel que décrit à l'alinéa 1b) ci-dessus ainsi qu'un cautionnement du paiement de la main d'oeuvre et des matériaux s'élevant à 50%, au moins, de la somme payable en vertu du contrat, OU

- ii) Une garantie d'exécution et un cautionnement du paiement de la main d'oeuvre et des matériaux, chacun s'élevant à 50% du montant payable en vertu du contrat.
- 3b) Au cas où il ne serait pas possible d'obtenir un cautionnement du paiement de la main d'oeuvre et des matériaux, tel que requis aux termes de l'alinéa 3a) ci-dessus, en s'adressant par conséquent à au moins deux compagnies de garantie acceptables, un dépôt de garantie supplémentaire s'élevant à 10% exactement du montant payable en vertu du contrat doit être fourni.
- 3c) Lorsqu'une soumission a été accompagnée d'un dépôt de garantie tel que décrit à l'alinéa 1b) ci-dessus, le montant du dépôt de garantie requis en vertu de l'alinéa 3a) ci-dessus peut être réduit du montant du dépôt de garantie qui accompagnait la soumission.
- 3d) Les obligations doivent être de la forme approuvée et doivent être émises par des compagnies dont les obligations sont acceptées par le gouvernement du Canada. Des modèles de la forme approuvée des garanties à déposer par les soumissionnaires, des garanties d'exécution et des cautionnements du paiement de la main-d'oeuvre et des matériaux ainsi qu'une liste des compagnies de garantie acceptables peuvent être obtenus en s'adressant au Services d'approvisionnement, Conseil national de recherches du Canada, édifice M-22, chemin Montréal, Ottawa (Ontario) K1A 0R6, Canada.

#### Article 6 - Intérêt payé sur les dépôts de garantie

- 1) Les soumissionnaires sont avertis qu'ils doivent se mettre d'accord personnellement avec leurs banquiers relativement à l'intérêt, le cas échéant, payé sur le montant du chèque certifié accompagnant leur soumission. Le Conseil ne paiera pas d'intérêt sur ledit chèque en attendant l'adjudication du contrat et ne sera pas non plus responsable du paiement des intérêts en vertu de toute disposition prise par les soumissionnaires.

#### Article 7 - Taxe sur les ventes

- 1) Le montant de la soumission doit comprendre toutes les taxes prélevées en vertu de la Loi sur l'accise, de la Loi sur la taxe d'accise, de la Loi sur la sécurité de la vieillesse, de la Loi sur les douanes ou du Tarif des douanes en vigueur ou applicables à ce moment.
- 2) Au Québec, la taxe provinciale ne doit pas être incluse au montant soumissionné, car le Gouvernement Fédéral en est exclu. Les soumissionnaires devront faire les démarches nécessaires auprès du Ministère du Revenu provincial pour recouvrir toute taxe payée sur les biens et services dans le cadre de ce contrat.

Cependant, les soumissionnaires devraient inclure dans leur prix, les taxes provinciales pour lesquelles les remboursements ne s'appliquent pas.

#### Article 8 - Examen de l'emplacement

- 1) Tous les soumissionnaires examineront l'emplacement des travaux proposés avant d'envoyer leur soumission, étudieront minutieusement ledit emplacement et obtiendront tous les renseignements nécessaires à la bonne exécution du contrat. Aucune réclamation postérieure ne sera permise ou admise relativement à tout travail ou matériaux pouvant être requis et nécessaires à la bonne exécution du présent contrat à l'exception des dispositions de l'article CG 35 des Conditions générales du cahier des charges général.

#### Article 9 - Erreurs, omissions, etc.

- 1a) Les soumissionnaires relevant des erreurs ou des omissions dans les dessins, le cahier des charges ou d'autres documents, ou ayant des doutes quant au sens ou à l'intention de n'importe quelle partie de ces derniers, devront en avvertir immédiatement l'ingénieur qui fera parvenir des directives ou des explications écrites à tous les soumissionnaires.
- 1b) Ni l'ingénieur, ni le Conseil ne seront responsables des directives orales.
- 1c) Les additions ou les corrections effectuées au cours de la présentation des soumissions seront incluses dans la soumission. Cependant, le contrat remplace toutes les communications, négociations et tous les accords, sous forme verbale ou écrite, se rapportant aux travaux et effectués avant la date du contrat.

#### Article 10 - Nul paiement supplémentaire pour accroissement des frais

- 1) Les seules autres modifications pouvant être apportées au prix forfaitaire sont celles précisées dans les Conditions générales du Cahier des charges général. Le prix forfaitaire ne sera pas modifié à la suite de changements dans les tarifs de transport, les cotes des changes, les échelles de salaire, le coût des matériaux, de l'outillage ou des services.

#### Article 11 - Adjudication

- 1a) Le Conseil se réserve le pouvoir et le droit de rejeter les soumissions provenant de parties ne possédant pas les connaissances et la préparation requises à la bonne exécution de la catégorie de travaux mentionnés dans les présentes et précisés dans les plans. Les soumissionnaires doivent fournir la preuve de leur compétence lorsque cela est exigée.
- 1b) Un soumissionnaire peut être tenu de faire parvenir au Services d'approvisionnement, Conseil national de recherches Canada, édifice M-22, chemin Montréal, Ottawa (Ontario) K1A OR6, Canada, des copies non signées des polices d'assurance auxquelles il envisage de souscrire pour satisfaire aux exigences relatives aux assurances comprises dans les Conditions d'assurance du Cahier des charges général.
- 1c) Le Conseil ne s'engage pas à accepter la soumission la plus basse ni une soumission quelconque.

#### Article 12 - Taxe TPS

- 1) La TPS qui est maintenant en vigueur est applicable à cette proposition; cependant, l'entrepreneur devra proposer un prix NE COMPRENNANT PAS la TPS. La TPS détaillée séparément dans toutes les factures et demandes de paiement partiel présentées pour des produits fournis ou un travail accompli et sera payée par le Canada. Le montant de la TPS sera inclus dans le prix total du contrat. L'Entrepreneur convient de verser à Revenu Canada tout montant payé ou dû au titre de la TPS.

Guide de la TVD 804F

Date de publication : août 2006

Dernière mise à jour : août 2010

ISBN: 1-4249-2010-8 (Imprimé), 1-4249-2012-4 (PDF), 1-4249-2011-6 (HTML)

## Publication archivées

**Avis aux lecteurs : Concernant la taxe de vente au détail (TVD)** – Le 1<sup>er</sup> juillet 2010, la taxe de vente harmonisée (TVH) de 13 % est entrée en vigueur en Ontario pour remplacer la TVD provinciale en la combinant avec la taxe fédérale sur les produits et services (TPS). Conséquemment, les dispositions de la TVD décrites dans cette page et dans d'autres publications ont expiré le 30 juin 2010.

A compter du 1<sup>er</sup> juillet 2010, cette publication fait partie des archives pour la TVD **seulement**. Puisque ce document reflète la loi de la TVD qui était en vigueur au moment où il fut publié et peut ne plus être valide, veuillez l'utiliser avec prudence.

- Les renseignements contenus dans le présent Guide décrivent les responsabilités d'un entrepreneur non résident qui obtient un contrat en vue d'effectuer des travaux de construction en Ontario, ainsi que celles de ses clients ontariens. Veuillez prendre note que le présent Guide remplace la version précédente publiée en mars 2001.

## Définition d'un entrepreneur non résident

Un entrepreneur non résident est un entrepreneur en construction dont le siège social est situé à l'extérieur de l'Ontario et qui a obtenu un contrat de construction pour effectuer des travaux en Ontario, mais qui n'a pas tenu de façon continue un établissement stable en Ontario au cours des douze mois qui ont précédé la signature du contrat, ou qui n'est pas une société constituée en Ontario. Un contrat de construction est un contrat pour ériger, remodeler ou réparer un bâtiment ou autre structure situé sur un terrain.

Un entrepreneur est une personne qui se livre à la construction, la modification, la réparation ou la rénovation de biens immobiliers et s'entend, sans s'y limiter,

1. d'un entrepreneur général et d'un sous-traitant,
2. d'un charpentier, d'un maçon, d'un tailleur de pierres, d'un électricien, d'un plâtrier, d'un plombier, d'un peintre, d'un décorateur, d'un paveur et d'un constructeur de ponts,
3. d'un entrepreneur en tôle, en carreaux et en terrazzo, en chauffage, en climatisation, en isolation, en ventilation, en pose de papier peint, en construction de routes, en revêtement de toiture et en ciment,

qui installe ou qui incorpore des articles dans un bien immobilier. (Consultez le Guide de la taxe de vente au détail n<sup>o</sup> 206F - Biens immobiliers et accessoires fixes).

## Inscription et cautionnement

Tout entrepreneur non résident à qui l'on accorde un contrat de construction pour des travaux en Ontario doit s'inscrire auprès du ministère des Finances (ministère), Unité des programmes

centralisés, et verser un cautionnement équivalent à 4 p. 100 du total de la valeur de chaque contrat. Ce cautionnement peut être acquitté en espèces, par chèque certifié (libellé à l'ordre du Ministre des Finances), par lettre de crédit ou par certificat de cautionnement.

Afin de s'inscrire auprès du ministère et pour obtenir plus de précisions sur le dépôt d'un cautionnement, les entrepreneurs peuvent communiquer avec l'Unité des programmes centralisés du ministère, 33, rue King Ouest, CP 623, Oshawa, Ontario, L1H 8H7, sans frais 1 866 ONT-TAXS (1 866 668-8297) ou télécopieur 905) 435-3617.

Tout entrepreneur non résident qui vend et qui fournit seulement des biens taxables à des clients de l'Ontario, ou qui fournit des services taxables en Ontario, peut obtenir un permis de vendeur régulier lui permettant de percevoir et remettre la TVD sur ses ventes. Tout entrepreneur non résident à qui un permis de vendeur régulier a été émis doit tout de même s'inscrire séparément auprès du ministère et verser un cautionnement s'il se voit accorder un contrat de construction en Ontario.

## **Lettre de conformité**

Après avoir reçu le cautionnement, le ministère envoie à l'entrepreneur non résident une lettre de conformité en deux exemplaires attestant que les exigences relatives à la TVD ont bien été respectées. L'entrepreneur doit alors remettre un exemplaire de cette lettre à son client.

S'il omet de le faire, le client doit retenir 4 p. 100 de chaque paiement dû à l'entrepreneur non résident et remettre les sommes retenues au Ministre des Finances (le ministre). Les paiements doivent être envoyés à l'Unité des programmes centralisés en prenant soin d'y joindre les détails du contrat visé. Au lieu d'effectuer ces paiements de 4 p. 100, le client peut remettre au ministre un certificat de cautionnement équivalent à 4 p. 100 du prix contractuel total.

Remarque : Tout client qui néglige d'observer ces règles pourrait être tenu de verser une somme égale à 4 % de tous les montants payables à l'entrepreneur non résident ou tout autre montant qui, de l'avis du ministère, devrait être assujéti à la TVD à la suite de l'exécution du contrat.

## **Calcul de la TVD**

### **Juste valeur**

La TVD doit être versée sur la « juste valeur » des matériaux achetés ou importés en Ontario et utilisés pour l'exécution du contrat en Ontario. Par « juste valeur », on entend :

- le prix d'achat en devises canadiennes;
- tous les frais de manutention et de livraison facturés par le fournisseur; et
- tous les droits de douane ainsi que les taxes de vente et d'accise fédérales (mais non la taxe fédérale sur les produits et services [TPS]).

L'entrepreneur est aussi tenu de payer la TVD aux fournisseurs de l'Ontario au moment de l'achat ou de la location (avec ou sans bail) de services, matériaux, machines ou d'équipement taxables.

## **Machines et équipement - loués à bail**

Lorsque des machines ou un équipement loués auprès d'un fournisseur de l'extérieur de l'Ontario sont apportés dans la province, la TVD est exigible sur les paiements de location pendant toute la période de séjour des machines et de l'équipement en Ontario.

## **Machines et équipement - appartenant à l'entrepreneur**

1. Si un entrepreneur apporte des machines et de l'équipement en Ontario pour une durée inférieure à douze mois, la TVD applicable doit être calculée selon la formule suivante :

$$1/36 \times \text{valeur comptable nette à la date d'importation} \times \text{nombre de mois en Ontario} \times \text{taux de taxe.}$$

Aux fins de cette formule, la TVD est exigible pour chaque mois ou partie de mois pendant lesquels les biens se trouvent en Ontario. En outre, on considère qu'un mois constitue une période de 31 jours consécutifs, et qu'une partie de mois représente plus de 12 jours. La TVD exigible est fondée sur le nombre de jours où les machines et l'équipement se trouvent en Ontario et non sur le nombre de jours d'utilisation effective des machines ou de l'équipement.

Exemple: De l'équipement est apporté en Ontario le 28 mars et sorti de la province le 8 mai. L'équipement a donc séjourné pendant 41 jours dans la province. La TVD est alors payable sur les 31 premiers jours de séjour temporaire en Ontario vs l'usage de l'équipement. Étant donné que la période restante (10 jours) n'est pas considérée comme une partie d'un mois, aucune TVD n'est exigible sur cette période.

1. Si l'on prévoit que les machines ou l'équipement apportés en Ontario resteront dans cette province pendant plus de 12 mois, l'entrepreneur doit payer la TVD selon la formule suivante :

$$\text{valeur comptable nette à la date d'importation} \times \text{taux de taxe}$$

Si, au moment de l'importation des machines et de l'équipement, la durée du séjour n'est pas connue, le vendeur peut appliquer la formule (a). Si, par la suite, il s'avère nécessaire de garder les machines et l'équipement en Ontario pendant une durée dépassant 12 mois, la TVD versée selon (a) pourra être déduite du montant de la TVD payable selon (b).

À l'aide de la formule (a) ou (b) ci-dessus, les entrepreneurs calculeront et remettront la TVD exigible sur la déclaration à produire une fois le contrat dûment exécuté.

## Fabrication de matériel à des fins personnelles

Il arrive qu'un entrepreneur doive fabriquer divers éléments, tels que des portes et fenêtres, pour exécuter son contrat de construction. Par fabrication, il faut entendre tout travail effectué dans une usine à l'extérieur d'un chantier de construction, une unité mobile ou un atelier sur un chantier de construction ou à proximité de ce dernier. La fabrication a lieu lors de la transformation de matières brutes en produits fabriqués qui seront utilisés dans l'exécution de contrats immobiliers.

Un entrepreneur est considéré comme un entrepreneur fabricant si :

1. les produits fabriqués sont destinés à un usage personnel dans l'exécution de contrats immobiliers; et que
2. le coût de fabrication des produits dépasse 50 000 \$ par an.

(Consultez le Guide de la taxe de vente au détail no 401F - Entrepreneurs- fabricants).

## Contrat avec le gouvernement fédéral

Lorsqu'un entrepreneur non résident conclut un contrat de construction avec le gouvernement fédéral, pour la construction d'un bâtiment et(ou) l'installation d'équipement, c'est la nature de l'équipement qui détermine si le contrat doit être soumissionné sur une base taxe comprise ou taxe non comprise.

Les contrats pour la construction d'un bâtiment et l'installation d'équipement qui dessert directement ce bâtiment (par ex. les ascenseurs, escaliers roulants, luminaires, systèmes de chauffage central, air climatisé, etc.) doivent être soumissionnés sur une base taxe comprise. L'entrepreneur est considéré comme le consommateur des articles utilisés dans l'exécution de ces contrats et doit payer ou rendre compte de la TVD sur les articles utilisés aux fins de ces contrats. Le simple fait qu'un contrat soit conclu avec le gouvernement fédéral ne donne pas droit, en soi, à une exemption.

Les contrats pour l'installation d'équipement qui devient un accessoire fixe et qui ne dessert pas directement un bâtiment (par ex. le matériel de manutention, l'outillage de production, l'équipement de télécommunication et le matériel de formation) peuvent être soumissionnés sur une base taxe non comprise. Les entrepreneurs qui entreprennent des contrats de ce genre sont permis d'acheter un tel équipement en exemption de la TVD en remettant un Certificat d'exemption de taxe valide aux fournisseurs. Seul un entrepreneur non résident inscrit auprès du ministère et ayant versé un cautionnement peut remettre un Certificat d'exemption de taxe.

## Exonérations

Il arrive que des entrepreneurs fournissent et installent de l'équipement ou du matériel pour certains clients ayant droit à une exemption de la TVD (par ex. fabricants, conseils de bandes indiennes, agriculteurs et organismes diplomatiques). Une fois installés, l'équipement ou les

matériaux deviennent des biens immobiliers s'ils sont fixés en permanence au sol, ou des accessoires fixes s'ils sont fixés de façon permanente à un bâtiment ou une structure immobilière. Étant donné que la responsabilité de la TVD incombe à l'entrepreneur, ce dernier doit communiquer avec le ministère pour déterminer si le client est admissible à l'exonération, avant d'offrir un contrat taxe non comprise.

## **Indiens inscrits, bandes indiennes et conseils de bandes indiennes**

L'entrepreneur non résident peut acheter des matériaux de construction en exemption de la TVD pour certains bâtiments et certaines structures situés dans des réserves. Le coût de ces projets doit être défrayé par un conseil de bande, et les bâtiments doivent servir à des fins communautaires, au bénéfice de la réserve. Dans le cas de contrats pour des projets de construction communautaires exonérés de taxe, le contrat doit être offert sur une base taxe non comprise. L'entrepreneur non résident peut acheter les matériaux sans payer la TVD s'il remet aux fournisseurs un Certificat d'exemption de taxe valide. Comme précisé ci-dessus, seul un entrepreneur non résident inscrit auprès du ministère et ayant versé un cautionnement peut remettre un Certificat d'exemption de taxe. (Consultez le Guide de la taxe de vente au détail n° 204F - Certificats d'exemption de taxe).

Les entrepreneurs non résidents doivent payer eux-mêmes la TVD sur les articles achetés à des fins d'incorporation à un bâtiment ou une structure, érigé à l'intention d'un Indien inscrit particulier dans une réserve. (Consultez le Guide de la taxe de vente au détail n° 808F - Indiens inscrits, bandes indiennes et conseils de bandes indiennes).

## **Exécution du contrat**

Une fois le contrat dûment exécuté, l'entrepreneur qui a dû déposer un cautionnement doit remplir une « Déclaration de la taxe de vente au détail - Entrepreneurs non résidents [PDF - 93 KO] » qui est fournie par le ministère.

Lorsque le cautionnement a été acquitté en espèces ou par chèque certifié, le montant déposé peut être déduit de la TVD que l'entrepreneur doit payer. Si le montant de cette taxe est supérieur au montant déposé, l'entrepreneur doit verser la différence. Dans le cas contraire, si le montant déposé est supérieur au montant de la taxe exigible, la différence lui sera remboursée.

Si, au lieu d'un acquittement en espèces, un certificat de cautionnement a été déposé, ce dernier fera l'objet d'une main-levée une fois que le paiement de la taxe aura été intégralement acquitté. Toutes les déclarations peuvent faire l'objet d'une vérification.

**Compagnies de cautionnement reconnues**

**Publiée septembre 2010**

Voici une liste des compagnies d'assurance dont les cautionnements peuvent être acceptés par le gouvernement à titre de garantie.

## 1. Compagnie canadiennes

Assurance ACE INA  
Allstate du Canada, Compagnie d'assurances  
Ascentus Ltée, Les Assurances (cautionnement seulement)  
Aviva, Compagnie d'Assurance du Canada  
AXA Assurances (Canada)  
AXA Pacific Compagnie d'assurance  
Le Bouclier du Nord Canadien, Compagnie d'Assurance  
Certas direct, compagnie d'assurances (cautionnement seulement)  
Chubb, Compagnie d'assurances du Canada  
Commonwealth, Compagnie d'assurances du Canada  
Compagnie d'assurance Chartis du Canada (anciennement La Cie d'assurance commerciale AIG du Canada)  
Co-operators General, Compagnie d'assurance  
CUMIS, Compagnie d'assurances générales  
La Dominion du Canada, Compagnie d'assurances générales  
Échelon, Compagnie D'Assurances Générale (cautionnement seulement)  
Economical, Compagnie Mutuelle d'Assurance  
Elite, Compagnie d'assurances  
La Compagnie d'Assurance Everest du Canada  
Federated, Compagnie d'assurances du Canada  
Federation, Compagnie d'assurances du Canada  
La Compagnie d'assurance et de Garantie Grain  
Gore Mutual Insurance Company  
The Guarantee, Compagnie d'Amérique du Nord  
Industrielle Alliance Pacifique, Compagnie d'Assurances Générales  
Intact Compagnie d'assurance  
Jevco, Compagnie d'assurances (cautionnement seulement)  
Compagnie canadienne d'assurances générales Lombard  
Compagnie d'assurance Lombard  
Markel, Compagnie d'assurances du Canada  
Missisquoi, Compagnie d'assurances  
La Nordique compagnie d'assurance du Canada  
The North Waterloo Farmers Mutual Insurance Company (fidélité du personnel seulement)  
Novex Compagnie d'assurance (fidélité du personnel seulement)  
La Personnelle, compagnie d'assurances  
La Compagnie d'Assurance Pilot  
Compagnie d'Assurance du Québec  
Royal & Sun Alliance du Canada, société d'assurances  
Saskatchewan Mutual Insurance Company  
Compagnie d'Assurance Scottish & York Limitée  
La Souveraine, Compagnie d'Assurance Générale  
TD, Compagnie d'assurances générales  
Temple, La compagnie d'assurance  
Traders, Compagnie d'assurances générales  
La Compagnie Travelers Garantie du Canada  
Compagnie d'Assurance Trisura Garantie  
Waterloo, Compagnie d'assurance  
La Compagnie Mutuelle d'Assurance Wawanesa  
Western, Compagnie d'assurances  
Western, Compagnie de garantie

## 2. Compagnie provinciales

Les cautionnements de garantie des compagnies suivantes peuvent être acceptés à condition que le contrat de garantie soit conclu dans une province où la compagnie est autorisée à faire affaires, comme il est indiquée entre parenthèses.

AXA Boréal Assurances Inc. (I.-P.-É., N.-B., Qué., Ont., Man., C.-B.)  
ALPHA, Compagnie d'assurances Inc. (Québec)  
Canada West Insurance Company (Ont., Man., Sask., Alb., C.-B., T.-N.-O.) (cautionnement seulement)  
La Capitale assurances générales inc. (T.-N.-L., N.-É., I.-P.-É., Qué. (cautionnement seulement), Man., Sask., Alb. C.-B., Nun., T.-N.-O., Yuk.)  
Coachman Insurance Company (Ont.)  
La Compagnie d'Assurance Continental Casualty (T.-N.-L., N.-É., I.-P.-É., N.-B., Qué., Ont., Man., Sask., Alb. C.-B., Nun., T.-N.-O., Yuk.)  
GCAN Compagnie d'assurances (T.-N.-L., N.-É., I.-P.-É., N.-B., Qué., Ont., Man., Sask., Alb. C.-B., Nun., T.-N.-O., Yuk.)  
The Insurance Company of Prince Edward Island (N.-É., I.-P.-É., N.-B.)  
Kingsway Compagnie d'assurances générales (N.-É., N.-B., Qué., Ont., Man., Sask., Alb., et C.-B.)  
La Compagnie d'Assurance Liberté Mutuelle (T.-N.-L., N.-É., I.-P.-É., N.-B., Qué., Ont., Man., Sask., Alb. C.-B., Nun., T.-N.-O., Yuk.)  
Norgroupe Assurances Générales Inc.  
Orléans, compagnie d'assurance générale (N.-B., Qué., Ont.)  
Saskatchewan Government Insurance Office (Sask.)  
SGI CANADA Insurance Services Ltd. (Ont., Man., Sask., Alb.)  
Société d'assurance publique du Manitoba (Man.)  
Union Canadienne, Compagnie d'assurances (Québec)  
L'Unique assurances générales inc. (T.-N.-L., N.-É., I.-P.-É., N.-B., Qué. (cautionnement seulement), Ont. (cautionnement seulement), Man., Sask., Alb. C.-B. (cautionnement seulement), Nun., T.-N.-O., Yuk.)

## 3. Compagnie étrangères

Aspen Insurance UK Limited  
Compagnie Française d'Assurance pour le Commerce Extérieur (fidélité du personnel seulement)  
Eagle Star Insurance Company Limited  
Société des Assurances Ecclésiastiques (fidélité du personnel seulement)  
Lloyd's, Les Souscripteurs du  
Mitsui Sumitomo Insurance Company, Limited  
NIPPONKOA Insurance Company, Limited  
Assurances Sompo du Japan  
Tokio Maritime & Nichido Incendie Compagnie d'Assurances Ltée  
XL Insurance Company Limited (cautionnement seulement)  
Zurich Compagnie d'Assurances SA

# Articles de convention

Les présents Articles de convention faits en double le 8<sup>ième</sup> jour de janvier, 2015

## Entre

Sa Majesté la Reine, du chef du Canada (ci-après appelé “ Sa Majesté”) représentée par le Conseil National recherches du Canada. (ci-après appelé “ le Conseil”)

Et Les installations électriques Pichette Inc.

( ci-après appelé “l’Entrepreneur”)

Font foi que sa Majesté et l’Entrepreneur ont établi entre eux les conventions suivantes:

## A1 Contrats

(23/01/2002)

- 1.1 Sous réserve des paragraphes A1.4 and A1.5, les documents constituant le contrat passé entre Sa Majesté et l’Entrepreneur (ci-après appelé le Contrat) sont:
  - 1.1.1 les présents Articles de convention;
  - 1.1.2 les documents intitulés “Plans et devis” et annexés aux présentes sous la cote “A”;
  - 1.1.3 le document intitulé “Modalités de paiement” et annexé aux présentes sous la cote “B”;
  - 1.1.4 le document intitulé, “Conditions générales” et annexé aux présentes sous la cote “C”;
  - 1.1.5 le document intitulé, “Conditions de travail” et annexé aux présentes sous la cote “D”;
  - 1.1.6 le document intitulé, “Conditions d’assurance” et annexé aux présentes sous la cote “E”;
  - 1.1.7 le document intitulé, “Conditions de garantie du contract” et annexé aux présentes sous la cote “F”; et
  - 1.1.8 toute modification au Contract en accord avec le Conditions générales.
  - 1.1.9 le document intitulé “Échelles de juste salaire pour les contrats fédéraux de construction”, désigné dans le présent document par l’appellation “Échelles de justes salaires”.

---

## Articles de Convention

1.2 Le Conseil désigne de **SAGI**  
du CNRC, du gouvernement du Canada, Ingénieur aux fins du Contrat et à toute fin, y compris aux fins  
accessoires, l'adresse de l'Ingénieur est réputée être:

### 1.3 Dans le Contrat

1.3.1 "Entente à prix fixe" désigne la partie du Contrat où il est stipulé qu'un paiement global sera fait  
en contrepartie de l'exécution des travaux auxquels elle se rapporte; et

1.3.2 "Entente à prix unitaire" désigne la partie du Contrat où il est stipulé que le produit d'un prix  
multiplié par un nombre d'unité de mesurage d'une catégorie sera versé à titre de paiement pour  
l'exécution des travaux visés par cette entente.

1.4 Toute dispositions du Contrat qui s'applique expressément et seulement à une Entente à prix unitaire ne  
s'applique à aucune partie des travaux qui relève de l' Entente à prix fixe.

1.5 Toute dispositions du Contrat qui s'applique expressément et seulement à une Entente à prix fixe ne  
s'applique à aucune partie des travaux qui relève de l' Entente à prix Unitaire.

### A2 Description des travaux et date d'achèvement (23/01/2002)

2.1 Entre la date des présentes Articles de convention et le jour de , l'Entrepreneur exécute, avec  
soin et selon le règles de l'art, à l'endroit et de la manière indiquée, les travaux suivants :

plus particulièrement décrits dans les Plans et devis, incluant les addenda no.

---

## Articles de Convention

### A3 Prix du marché

(23/01/2002)

- 3.1 Sous réserve de toute addition, soustraction, déduction, réduction ou compensation prévue en vertu du Contrat, Sa Majesté, aux dates et de la manière énoncées ou mentionnées dans les Modalités de paiement, paie à l'Entrepreneur:
- 3.1.1 la somme de \$ (TPS/TVH en sus), en considération et l'exécution des travaux ou des parties de travaux à laquelle s'applique l'Entente à prix fixe, et
- 3.1.2 une somme égale à l'ensemble des produits du nombre d'unités de mesurage de chaque catégorie de travail, d'outillage ou de matériaux indiqué dans le Certificat définitif de mesurage mentionné ou paragraphe CG44.8, ce nombre d'unités étant multiplié selon le cas par le prix de chaque unité indiquée dans le Tableau des prix unitaires relativement à l'exécution des travaux ou des parties de travaux qui ont fait l'objet d'une Entente à prix unitaire.
- 3.2 Pour le gouverne de l' Entrepreneur et des personnes chargées de l'exécution du Contrat au nom de sa Majesté, mais sans toutefois comporter une garantie ou un engagement de quelque nature de la part de l'une ou l'autre partie, il est estimé que la somme totale payable par Sa Majesté à l'Entrepreneur pour la partie des travaux qui a fait l'objet d'une Entente à prix unitaire, sera d'environ N/A \$
- 3.3 L'alinéa A3.1.1 ne s'applique qu'à une Entente à prix fixe.
- 3.4 L'alinéa A3.1.2 et le paragraphe A3.2 ne s'appliquent qu'à une Entente à prix unitaire.

A4 Adresse de L'Entrepreneur

(23/01/2002)

- 4.1 Aux fins du Contrat, y compris les fins accessoires, l'adresse de l'Entrepreneur est réputé être:

A5 Tableau des prix unitaires

(23/01/2002)

5.1 Il est convenu entre Sa Majesté et l'Entrepreneur que le tableau ci-après est le Tableau des prix unitaires pour le Contrat:

Colonne 1 Postes	Colonne 2 Catégorie de travail outillage ou de matériaux	Colonne 3 Unité de mesurage	Colonne 4 Quantité totale estimative	Colonne 5 Prix unitaire	Colonne 6 Prix total estimatif
		N/A			

5.2 Le Tableau des prix unitaires présenté au paragraphe A5.1 décrit la partie des travaux visée par l'Entente à prix unitaire.

5.3 La partie des travaux qui n'est pas décrite dans le Tableau des prix unitaires mentionné au paragraphe A5.2 est la partie des travaux visée par l'Entente à prix fixe.

**END OF SECTION**

**1. DESCRIPTION DES TRAVAUX**

- .1 Les travaux visés par le présent contrat comprennent les rénovations des salles de bain dans les édifices M-2 (salle 124) et M-59 (salles 104, 105, 106, 107, 115, 128 et 129) du Conseil national de recherches.

**2. DESSINS**

- .1 Les dessins suivants illustrent les travaux exécutés et font partie du présent contrat.

- 5378-5379-A000
- 5378-5379-A010
- 5378-5379-A011
- 5378-5379-A012
- M2-5378-A050
- M2-5378-A052
- M2-5378-A100
- M2-5378-A102
- M59-5379-A054
- M59-5379-A055
- M59-5379-A104
- M59-5379-A105
- 5378 & 5379 M0.1
- 5378 & 5379 M1.1
- 5378 & 5379 M2.1
- 5378 & 5379 M2.2
- 5378 & 5379 E0.1
- 5378 & 5379 E1.1
- 5378 & 5379 E2.1
- 5378 & 5379 E2.2

**3. ACHÈVEMENT DES TRAVAUX**

- .1 Terminer tous les travaux dans les 12 semaines qui suivent la réception de l'avis d'acceptation de la soumission.

**4. GÉNÉRALITÉS**

- .1 Sans objet en français.  
.2 Fournir les items mentionnés dans les dessins ou dans les spécifications

**5. MATÉRIEL ET PRODUITS SPÉCIFIÉS, DÉSIGNÉS ACCEPTABLES OU SUBSTITUTS**

- .1 Les produits et le matériel spécifiés dans les dessins ou les devis ont été sélectionnés dans le but d'établir des normes de rendement et de qualité. Dans la plupart des cas, lorsque l'on précise la marque de commerce et le numéro de modèle de tout produit ou matériel, on indique aussi les noms d'autres fabricants qui seraient acceptables. Les entrepreneurs peuvent calculer le montant de leur soumission en se fondant sur les prix des produits et

du matériel fournis par n'importe quel des fabricants désignés comme étant des fournisseurs acceptables de produits ou de matériel particuliers.

- .2 En plus des fabricants spécifiés ou désignés comme étant acceptables, vous pouvez demander au représentant ministériel d'approuver d'autres fabricants, produits ou matériel. Pour faire approuver un produit en tant que substitut, vous devez remettre une demande par écrit au représentant ministériel au cours de la période fixée pour soumissionner, au plus tard dix (10) jours ouvrables avant la clôture de l'appel d'offres.
- .3 Vous devez attester par écrit que le substitut répond à toutes les exigences relatives aux dimensions, à la capacité, au rendement et à la qualité du matériel ou des produits spécifiés. En outre, il est entendu que l'entrepreneur assume tous les coûts qui sont reliés à l'acceptation des substituts proposés, ou qui en résultent.
- .4 L'approbation des substituts sera communiquée sous forme d'un Addendum aux documents de soumission.
- .5 Nous n'examinerons pas les demandes d'approbation d'autres fabricants, produits ou matériel qui sont incomplets et impossibles à évaluer ou qui sont soumises moins de dix (10) jours avant la clôture de l'appel d'offres.

## **6. NORMES MINIMALES**

- .1 Se conformer aux exigences des normes minimales acceptables des divers codes fédéraux, provinciaux et municipaux pertinents tels le Code national du bâtiment, le Code national de prévention des incendies, le Code canadien de la plomberie, le Code canadien de l'électricité, le Code canadien de la sécurité sur les chantiers de construction et la Loi provinciale sur la sécurité dans la construction, ou les dépasser.
- .2 Effectuer les travaux conformément aux normes et codes dont il est fait mention, en vigueur ou révisés à la date de publication du présent devis.

## **7. SYSTÈME D'INFORMATION SUR LES MATIÈRES DANGEREUSES UTILISÉES AU TRAVAIL (SIMDUT)**

- .1 L'entrepreneur doit se conformer aux lois fédérales et provinciales portant sur le SIMDUT. Les responsabilités de l'entrepreneur comprennent les tâches suivantes, sans s'y limiter :
  - .1 S'assurer de l'étiquetage acceptable de tout produit contrôlé introduit sur les lieux des travaux par l'entrepreneur lui-même ou un sous-traitant, ou l'un de leurs fournisseurs;
  - .2 Mettre à la disposition des travailleurs et du représentant ministériel des fiches techniques « santé - sécurité » (FTSS) portant sur ces produits contrôlés;
  - .3 Former ses propres ouvriers pour le SIMDUT et les produits contrôlés présents au chantier;
  - .4 Informer les autres entrepreneurs, les sous-traitants, le représentant ministériel, les visiteurs autorisés, ainsi que les représentants des organismes externes d'inspection, de la présence et de l'utilisation de ces produits sur les lieux des travaux.
  - .5 Le contremaître ou le surveillant des travaux doit pouvoir démontrer au représentant ministériel qu'il a reçu une formation portant sur le SIMDUT et qu'il est au courant des exigences de ce système. Le représentant ministériel peut

exiger le remplacement de cette personne, si celle-ci ne satisfait pas à l'exigence susmentionnée ou si le SIMDUT n'est pas mis en œuvre de façon acceptable.

## **8. PRESCRIPTIONS DU RÈGLEMENT 208, SECTION 18(A)**

- .1 Tel que prescrit par le Règlement 208 de la Loi sur la santé et la sécurité au travail du Ministère du Travail de l'Ontario, nous vous avisons de la présence possible sur les lieux de travail visés par le présent contrat des matières désignées suivantes:
  - .1 Veuillez-vous référer au rapport concernant les matières dangereuses faisant partie intégrante des documents contractuels pour de plus amples informations.
    - .1 L'entrepreneur général a la responsabilité de s'assurer que tous les éventuels sous-traitants ont reçu une copie de liste des matières désignées qui peuvent être présentes sur le chantier.
    - .2 L'entrepreneur est donc averti de prendre les mesures de précaution suivantes lorsqu'il est en présence des matières nommées plus haut:

## **9. VENTILATION DES COÛTS**

- .1 Avant de demander le premier paiement d'acompte, soumettre à l'approbation du représentant ministériel une ventilation des coûts et ce, dans les 72 heures suivants l'émission du contrat.
- .2 Une fois approuvée, utiliser la ventilation des coûts comme base pour la soumission de toute autre demande.
- .3 Avant de rédiger et de soumettre une demande sous sa forme définitive, obtenir le consentement verbal du représentant ministériel quant au montant de cette demande.

## **10. SOUS-TRAITANTS**

- .1 Dans les 72 heures qui suivent l'acceptation de la soumission, soumettre à l'étude du représentant ministériel une liste complète des sous-traitants.

## **11. INSIGNES D'IDENTIFICATION ET ENQUÊTES DE SÉCURITÉ DU PERSONNEL**

- .1 Toute personne employée par l'Entrepreneur ou par un de ses sous-traitants et présents sur le chantier doit rencontrer les exigences d'une enquête de sécurité en accord avec la section intitulée Instructions Spéciales aux Soumissionnaires.
- .2 Toutes ces personnes doivent porter et garder visible une insigne d'identification émise par le Bureau de la sécurité du CNRC

## **12. HEURES DE TRAVAIL ET EXIGENCES D'ESCORTE**

- .1 Les heures normales de travail au CNRC sont de 8h00 à 16h30, du lundi au vendredi inclusivement, sauf les congés fériés.
- .2 En tout autre temps, des laissez-passer spéciaux sont nécessaires pour avoir accès au chantier.
- .3 Obtenir la permission du représentant ministériel d'exécuter des tâches particulières avant de planifier tout travail après les heures normales de travail.

- .4 Après les heures normales de travail, il se peut qu'une escorte soit nécessaire. L'entrepreneur est responsable de défrayer les coûts relatifs aux exigences en matière de sécurité lorsqu' applicable.

### **13. CALENDRIER DES TRAVAUX**

- .1 L'Entrepreneur doit soumettre un calendrier détaillé des travaux, indiquant les dates du début et de la fin des diverses étapes des travaux et le mettre à jour. Il doit remettre ce calendrier au représentant ministériel au plus tard deux semaines après l'adjudication du contrat et avant d'entreprendre tout travail au chantier.
- .2 Informer le représentant ministériel par écrit de toute modification apportée au calendrier,
- .3 7 jours avant la date d'achèvement prévue, planifier de faire une inspection provisoire avec le représentant ministériel.

### **14. RÉUNIONS**

- .1 Tenir régulièrement des réunions aux heures et aux endroits approuvés par le représentant ministériel.
- .2 Aviser toutes les parties intéressées des réunions pour assurer une bonne coordination des travaux.
- .3 Le représentant ministériel déterminera les heures de réunions et assume la responsabilité d'enregistrer et distribuer le procès-verbal.

### **15. DESSINS D'ATELIER**

- .1 Soumettre au représentant ministériel, aux fins de vérification, les dessins d'atelier, la documentation et les échantillons prescrit 2 semaines après l'adjudication du contrat.
- .2 Soumettre au représentant ministériel aux fins de vérification, une liste complète de tous les dessins d'atelier, la documentation et les échantillons prescrits et une confirmation écrite des dates de livraison correspondantes dans un délai d'une (1) semaine, suite à la date d'approbation des dessins d'atelier, de la documentation et des échantillons. Cette liste devra être mise à jour sur une base d'une (1) semaine et n'importe quels changements à la liste devront être immédiatement notifiés par écrit au représentant ministériel.
- .3 Examiner les dessins d'atelier, la documentation et les échantillons avant de les soumettre.
- .4 Soumettre des copies électroniques des dessins d'atelier et des spécifications des produits et soumettre les échantillons pour vérification à moins d'avis contraire.
- .5 L'entrepreneur demeure responsable des erreurs et des omissions apparaissant dans les dessins d'atelier et la documentation et doit s'assurer qu'ils sont conformes aux documents contractuels même s'ils sont revus par le représentant ministériel.

### **16. ÉCHANTILLONS ET MAQUETTES**

- .1 Soumettre des échantillons aux dimensions et quantités prescrites.
- .2 Si la couleur, le motif ou la texture sont des facteurs spécifiés, soumettre tout un éventail d'échantillons.

- .3 Monter des modèles et des maquettes au chantier, aux endroits qui conviennent le représentant ministériel.
- .4 Tout travail terminé est vérifié sur place d'après les modèles ou maquettes approuvés qui servent de normes pour la façon et les matériaux seront les standards de performance établis pour le projet.

## **17. MATÉRIAUX ET MISE EN ŒUVRE**

- .1 Pour le présent projet, n'utiliser que des matériaux neufs, sauf si noté autrement.
- .2 Seuls les travaux de première classe seront acceptés, non seulement en ce qui a trait à la sécurité, l'efficacité et la durabilité, mais aussi à l'exactitude du détail et au bon rendement.

## **18. OUVRAGES ET MATÉRIAUX FOURNIS PAR LE PROPRIÉTAIRE**

- .1 Les ouvrages et matériaux non inclus dans ce contrat sont décrits ~~sur les dessins et dans le devis. Se référer à~~ dans l'annexe 2 incluse dans les documents contractuels ci-joint.
- .2 Tous les matériaux retournés au Propriétaire doivent être transportés à un lieu d'entreposage désigné par le représentant ministériel.
- .3 Sauf indication contraire, prendre possession des matériaux fournis par le Propriétaire à leur lieu d'entreposage et assurer leur transport.
- .4 Responsabilités de l'Entrepreneur :
  - .1 les décharger à pied d'œuvre;
  - .2 en faire aussitôt l'inspection et signaler tout article endommagé ou défectueux;
  - .3 par écrit, informer le représentant ministériel des articles qui sont reçus en bon état;
  - .4 les manutentionner à pied d'œuvre, ce qui comprend leur déballage et leur entreposage;
  - .5 Réparer ou remplacer les articles endommagés au chantier.
  - .6 Installer et raccorder les produits finis conformément aux prescriptions.

## **19. VOIES D'ACCÈS**

- .1 Prendre les dispositions nécessaires avec le représentant ministériel avant de commencer les travaux ou avant de transporter des matériaux et du matériel au chantier.
- .2 Obtenir l'approbation du représentant ministériel quant aux moyens d'accès normaux au chantier pendant la période de construction.
- .3 Obtenir l'approbation du représentant ministériel avant de suspendre temporairement les travaux sur le chantier; avant de retourner au chantier et avant de quitter le chantier à la fin des travaux.
- .4 Obtenir l'approbation du représentant ministériel avant de suspendre temporairement les travaux sur le chantier; avant de retourner au chantier et avant de quitter le chantier à la fin des travaux.
- .5 Aménager et entretenir des routes provisoires et assurer leur déneigement pendant les travaux.

- .6 L'Entrepreneur doit réparer et nettoyer les routes qu'il a dû utiliser au cours des travaux.

## **20. UTILISATION DU CHANTIER**

- .1 Limiter les travaux sur le chantier aux secteurs approuvés par le représentant ministériel au moment de la soumission.
- .2 Tous matériel, structures, abris, etc. provisoires doivent se trouver dans les secteurs désignés.
- .3 Limiter le stationnement aux secteurs désignés.

## **21. ACCEPTATION DU CHANTIER**

- .1 Avant d'entreprendre les travaux, l'Entrepreneur doit visiter le chantier et, en compagnie du représentant ministériel, revoir toutes les conditions qui pourraient toucher ses travaux.
- .2 Le début des travaux signifiera l'acceptation des conditions existantes.

## **22. BUREAU ET TÉLÉPHONE AU CHANTIER**

- .1 L'Entrepreneur devra ériger, à ses frais, un bureau temporaire au chantier.
- .2 Au besoin, installer un téléphone et en assurer l'entretien.
- .3 Il est interdit d'utiliser les téléphones du CNRC, sauf en cas d'urgence.

## **23. INSTALLATIONS SANITAIRES**

- .1 Obtenir la permission du représentant ministériel pour utiliser les installations sanitaires existantes.

## **24. SERVICES PROVISOIRES**

- .1 L'Entrepreneur pourra bénéficier d'une source provisoire d'électricité à pied d'œuvre. Il devra fournir, sans frais, tous les raccords et matériaux nécessaires pour assurer ledit service au chantier.
- .2 Fournir et installer tous les centres de distributions, disjoncteurs, conduits, câblage, commutateur de déconnexion, transformateurs nécessaires à partir de la source d'électricité.
- .3 Il n'est permis d'utiliser le courant que pour les outils électriques, l'éclairage, les commandes, les moteurs, et non pas pour chauffer.
- .4 Sur demande, il sera possible de se raccorder provisoirement au réseau de distribution d'eau.
- .5 Assumer tous les frais pour amener l'eau aux endroits nécessaires.
- .6 Se conformer aux exigences du CNRC lors du raccordement aux réseaux existants, conformément aux articles "Coopération" et "Interruptions des services" de cette section".

**25. DEVIS DESCRIPTIF, BULLETINS, DESSINS D'ARCHIVES**

- .1 L'Entrepreneur doit conserver à pied d'œuvre une (1) copie à jour et en bon état de tous les devis, dessins et bulletins relatifs aux travaux; le représentant ministériel ou ses représentants doivent pouvoir les consulter en tout temps.
- .2 L'Entrepreneur doit annoter au moins une (1) copie du devis et des dessins pour y indiquer tous les travaux tels qu'ils ont été exécutés. Il doit la remettre au représentant ministériel avec la Demande de paiement pour le Certificat définitif d'achèvement des travaux.

**26. COOPÉRATION**

- .1 Coopérer avec le personnel du CNRC pour que les travaux de recherche courants soient interrompus le moins possible.
- .2 Faire, à l'avance, un calendrier de tous les travaux qui pourraient interrompre le travail normal exécuté dans l'édifice.
- .3 Faire approuver le calendrier par le représentant ministériel.
- .4 Donner un préavis écrit de 72 heures au représentant ministériel avant toute interruption projetée des installations, des secteurs, des corridors, des services mécaniques ou électriques, et attendre son autorisation.

**27. MESURES DE PROTECTION ET ÉCRITEAUX AVERTISSEMENT**

- .1 Fournir et installer tous les matériaux nécessaires pour protéger le matériel existant.
- .2 Ériger des écrans anti-poussière pour éviter que la poussière et les débris ne se répandent en dehors des limites des travaux.
- .3 Protéger contre la poussière le matériel et le mobilier avec des bâches et coller ces dernières au plancher, au moyen de ruban adhésif, pour que la poussière ne s'infilte pas.
- .4 Réparer ou remplacer, gratuitement et à la satisfaction du représentant ministériel, tout bien du Propriétaire endommagé pendant les travaux.
- .5 Protéger les édifices, les routes, les pelouses, les services, etc. contre tout dommage qui pourrait survenir suite à l'exécution des présents travaux.
- .6 Planifier et coordonner les travaux pour que l'eau, la poussière, etc. ne s'infilte pas dans les édifices.
- .7 Fermer toutes les portes, fenêtres, etc. qui pourraient permettre le passage de la poussière, de vapeurs, etc. dans les autres secteurs de l'édifice.
- .8 Fermer le secteur des travaux à la fin de chaque journée de travail et être responsable des lieux.
- .9 Fournir et installer en permanence des barrières de sécurité appropriées autour du chantier pour éviter que le public et le personnel du CNRC soient blessés pendant l'exécution des travaux.
- .10 Poser des écriteaux d'avertissement pour toutes les situations où il pourrait se produire des blessures (ex : Casque protecteurs obligatoires, danger, travaux, etc.) ou lorsque le représentant ministériel le demande.

- .11 Fournir et installer des abris provisoires au-dessus des entrées et des sorties de l'édifice pour assurer la protection des piétons. Tous ces abris doivent pouvoir résister aux intempéries et à la chute de débris

**28. BILINGUISME**

- .1 Tous les écriteaux, avis, etc. doivent être bilingues.
- .2 Toute identification de services exigée aux termes du présent contrat.

**29. DISPOSITION DES OUVRAGES**

- .1 Les localisations des équipements, appareils, raccords et ouvertures tel que spécifiées ou indiquées aux dessins doivent être considérées comme approximatives.
- .2 Situer les équipements, appareils et systèmes de distributions de façon à minimiser les interférences et maximiser l'espace utilisable et en accord avec les instructions du manufacturier pour un accès et entretien sécuritaire
- .3 Engager une personne compétente pour agencer les travaux selon les documents contractuels

**30. ÉCARTS ET INTERFÉRENCES**

- .1 Avant de débiter les travaux, examiner les dessins et le devis. Signaler aussitôt au représentant ministériel tout écart, défaut, omission ou interférence qui touchent les travaux.
- .2 Si, au cours des travaux, l'Entrepreneur trouve que les plans ne reflètent pas la réalité, il lui incombe de le signaler immédiatement par écrit au représentant ministériel, lequel doit rapidement vérifier les allégations.
- .3 Tout travail exécuté après cette découverte, jusqu'à ce qu'il soit autorisé, doit être fait aux risques de l'Entrepreneur.
- .4 Si des obstacles ou interférences mineures sont décelés en cours d'exécution et qu'ils n'avaient pas été signalés sur la soumission originale ou sur les plans et le devis, fournir et installer des doubles coudes ou des coudes ou modifier le tracé des services pour qu'il soit appropriés aux conditions du chantier, et ce sans frais supplémentaire.
- .5 Prendre les dispositions pour que tous les travaux ne gênent d'aucune façon l'exécution des autres travaux.

**31. INSTRUCTIONS DU FABRICANT**

- .1 Sauf indications contraires, se conformer aux plus récentes instructions écrites du fabricant concernant les matériaux et le matériel à utiliser et les méthodes de mise en place.
- .2 Aviser le représentant ministériel par écrit de toute divergence entre le présent devis et les instructions du fabricant; le représentant ministériel déterminera alors quel document a priorité.

### **32. CHAUFFAGE PROVISOIRE ET VENTILATION**

- .1 Assumer les frais de la ventilation et du chauffage provisoire utilisés pendant la construction, y compris les frais d'installation, de combustible, d'exploitation, d'entretien et d'enlèvement du matériel.
- .2 Sauf si le représentant ministériel l'a autorisé, il est interdit d'utiliser des appareils de chauffage autonomes répandant des émanations dans les zones de travail.
- .3 Fournir et installer le matériel provisoire de chauffage et de ventilation requis dans les endroits fermés afin de:
  - .1 faciliter l'exécution des travaux.
  - .2 protéger les ouvrages et les matériaux contre l'humidité et le froid.
  - .3 réduire la condensation de l'humidité sur les surfaces à un niveau acceptable.
  - .4 assurer les niveaux de température ambiante et d'humidité indispensables pour l'entreposage, l'installation et la période de séchage requis des matériaux.
  - .5 assurer une ventilation adéquate afin de répondre aux exigences de santé publique concernant la sécurité dans les zones de travail.
- .4 Maintenir une température d'au moins 10o C (50oF) aux endroits spécifiés, partir du début des travaux de finition jusqu'au moment de l'acceptation du bâtiment par le représentant ministériel.
  - .1 Maintenir la température ambiante et l'humidité aux niveaux nécessaires pour assurer le bien-être du personnel du CNRC.
- .5 Prendre les mesures nécessaires pour empêcher les accumulations dangereuses de poussières, fumées, buées, vapeurs et émanations, dans les zones occupées pendant les travaux de construction, y compris aussi les aires d'entreposage et les installations sanitaires.
  - .1 Évacuer les substances dangereuses de sorte que la santé des occupants ne soit pas mise en danger.
- .6 Assurer une surveillance constante et rigoureuse du fonctionnement du matériel de chauffage et de ventilation.
  - .1 Faire respecter les normes et les codes pertinents.
  - .2 Se conformer aux instructions de l'Agent de prévention des incendies du CNRC, ce qui comprend la désignation, sur demande, de gardiens de sécurité- incendie à temps complet.
  - .3 Faire respecter les normes de sécurité.
  - .4 Doter les appareils de combustion autonomes de mises à l'air libre vers l'extérieur.
- .7 Rédiger les soumissions en supposant que les installations et le matériel neufs ou existants ne pourront être utilisés pour le chauffage et la ventilation provisoire.
- .8 Une fois le contrat adjudgé, le représentant ministériel peut autoriser l'utilisation de l'installation permanente s'il peut y avoir entente sur ce qui suit:
  - .1 conditions d'utilisation, matériel spécial, protection et entretien, remplacement des filtres, etc.;

- .2 méthodes pour s'assurer que le caloporteur ne sera pas perdu et, dans le cas de la vapeur, entente sur ce qu'il adviendra du condensateur;
- .3 réduction du prix du contrat (s'il doit être débit);
- .4 prescriptions pertinentes aux garanties du matériel.

### **33. INTERRUPTIONS DES SERVICES**

- .1 Lorsque les travaux impliquent le raccord a des services existants, exécuter les travaux en temps et manière pré-agrées avec le représentant ministériel et autres autorités ayant juridiction avec le minimum de perturbations au personnel du CNRC, a la circulation véhiculaire et de temps d'interruption du service. L'entrepreneur ne doit en aucun cas opérer les équipements du CNRC.
- .2 Avant de commencer les travaux, établir la localisation et l'étendue des lignes de services dans l'espace de travail et ou affectés par les travaux et aviser le représentant ministériel des constatations.
- .3 Fournir une cédule et obtenir l'approbation du représentant ministériel pour toute interruption ou fermeture de services actif et allouer un préavis de 72 heures.
- .4 Aviser le représentant ministériel immédiatement suivant la rencontre de services inconnus et confirmer la découverte par écrit
- .5 Afin de minimiser les interruptions, prévoir des déviations, des ponts, des sources d'alimentation de rechange, etc., au besoin
- .6 Protéger les services existants comme il se doit et effectuer aussitôt toutes les réparations nécessaires si des dommages surviennent.
- .7 Enlever tous les lignes de services abandonnés tel qu'indiqués dans les documents contractuels et tel qu'approuvé par le représentant ministériel, boucher et ou autrement sceller aux points de coupure. Noter et fournir une copie au représentant ministériel de la localisation de toutes les lignes de services maintenues, déroutées et ou abandonnées

### **34. DÉCOUPAGE ET RAPIÉÇAGE**

- .1 Découper les surfaces existantes de façon à ce que les ouvrages s'agencent correctement entre eux.
- .2 Supprimer tous les articles indiqués ou prescrits.
- .3 Rapiécer et réparer, à la satisfaction du représentant ministériel, les surfaces qui ont été modifiées, découpées ou endommagées, avec des matériaux identiques.
- .4 Là où des nouveaux tuyaux passent à travers des travaux existants, percer une ouverture. La dimension de l'ouverture doit laisser un jeu de 12mm (1/2") autour des tuyaux ou de l'isolation de la tuyauterie. Ne pas percer, ni couper aucune surface sans l'approbation de le représentant ministériel.
- .5 Obtenir l'approbation écrite du représentant ministériel avant de percer des ouvertures dans les pièces de charpente neuves ou existantes.
- .6 Calfeutrer toutes les ouvertures où des câbles, conduits ou tuyaux passent à travers les murs avec un calfeutrante acoustique conforme à CAN/CGSB 19.21-M87.

- .7 Là où des câbles, conduits ou tuyaux passent à travers des murs ou des planchers coupe-feu, remplir l'espace avec des fibres de verre comprimées et calfeutrer avec un calfeutrant en accord avec CAN/CGSB-19.13 et NBC 3.1.7.

### **35. DISPOSITIFS DE FIXATION**

- .1 Sauf autorisation expresse du représentant ministériel, il est interdit d'utiliser des pistolets à charge explosive.
- .2 Se conformer aux exigences de la norme ACNOR A-166, Pistolets d'ancrage à charge explosive.
- .3 Obtenir la permission du représentant ministériel avant d'utiliser tout genre d'outils percussion.

### **36. SURCHARGE**

- .1 S'assurer qu'aucune partie de l'ouvrage ou de l'édifice ne supporte une charge susceptible de compromettre sa sécurité ou de causer une déformation permanente ou un dommage de structure.

### **37. DRAINAGE**

- .1 Assurer le drainage et le pompage temporaires, selon les besoins, afin de garder les excavations et le chantier propres.

### **38. ENCEINTES ET FERMETURES DE LA CHARPENTE**

- .1 Ériger et entretenir toutes les enceintes temporaires nécessaires pour protéger les fondations, le sous-sol, le béton, la maçonnerie, etc. contre le gel ou les dommages.
- .2 Ne pas les enlever tant que tout danger de dommage n'est pas écarté et tant que la cure n'est pas terminée.
- .3 Munir les ouvertures extérieures de fermetures protectrices provisoires à l'épreuve des intempéries, jusqu'à ce que les châssis, les vitres et les portes extérieures soient installés en permanence.
- .4 Fournir et installer des fermetures avec verrou, afin d'assurer la sécurité des installations du CNRC, et en être responsable.
- .5 Sur demande, remettre des clés au personnel de sécurité du CNRC.
- .6 Disposer les ouvrages avec soin et avec précision. Vérifier toutes les dimensions et en être responsable. Situer les points de repère généraux et prendre les mesures nécessaires pour empêcher leur déplacement.
- .7 Pendant toute la durée des travaux, voir à toujours être au courant des conditions du chantier et des travaux exécutés par tous les autres gens de métier, engagés dans le présent projet.
- .8 Sauf indication contraire, dissimuler tous les services, tuyauterie, câblage, conduits, etc. dans les planchers, les murs ou les plafonds.

**39. ENTREPOSAGE**

- .1 Pour ne pas que les outils, matériaux, etc. soient endommagés ou volés, prévoir un entrepôt et en être responsable.
- .2 Il est interdit d'entreposer des produits inflammables ou explosifs sur le chantier à moins que l'Agent de prévention des incendies du CNRC l'autorise.

**40. EXAMEN GÉNÉRAL**

- .1 Même si le représentant ministériel revoit périodiquement les travaux de l'Entrepreneur, ceci ne dégage pas l'Entrepreneur de sa responsabilité d'exécuter les travaux conformément aux documents contractuels. L'Entrepreneur doit effectuer son propre contrôle de la qualité pour vérifier si ses travaux sont conformes aux documents contractuels.
- .2 Informer le représentant ministériel de tout obstacles à la bonne conduite des travaux et obtenir son approbation pour la relocalisation

**41. INSPECTION DES SERVICES ENFOUIS OU DISSIMULÉS**

- .1 Avant de dissimuler tout service installé, s'assurer que tous les organismes d'inspection intéressés, y compris le CNRC, ont inspecté les ouvrages et ont assisté à tous les essais. Dans le cas contraire, l'Entrepreneur peut avoir à les découvrir à ses propres frais.

**42. ESSAIS**

- .1 A l'achèvement des travaux, ou sur demande du représentant ministériel et / ou des inspecteurs des organismes locaux en cours d'exécution, et avant que tout service soit couverts et que le rinçage soit terminé, faire l'essai de toutes les installations en présence du représentant ministériel.
- .2 Obtenir tous les certificats d'acceptation ou tous les résultats d'essais des organismes compétents et les remettre le représentant ministériel. Dans le cas contraire, le projet ne sera pas complet.

**43. OCCUPATION PARTIELLE**

- .1 Le CNRC peut demander une occupation partielle de l'installation si les travaux se poursuivent au-delà de la date d'achèvement prévue.
- .2 Ne pas limiter l'accès à l'édifice, routes et services.
- .3 Ne pas encombrer inutilement le chantier de matériaux ou de matériel.

**44. ÉVACUATION DES DÉCHETS**

- .1 Évacuer, en toute sécurité hors des terrains du CNRC, tous les déchets, y compris les produits volatils; voir article "Exigences Générales de sécurité", section 001545.

**45. NETTOYAGE PENDANT LA CONSTRUCTION**

- .1 Sur une base quotidienne, garder les lieux et le secteur adjacent au campus, y compris les toits, exempts de débris et de déchets.
- .2 Apporter sur les lieux des conteneurs destinés à la cueillette des déchets et des débris.

**46. NETTOYAGE FINAL**

- .1 A la fin des travaux, effectuer le nettoyage final à la satisfaction du représentant ministériel.
- .2 Nettoyer toutes les nouvelles surfaces, les luminaires et les surfaces existantes touchés par les présents travaux, remplacer les filtres, etc.
- .3 Nettoyer tous les couvre-planchers souples et les préparer à recevoir le fini protecteur qui sera appliqué par le personnel du CNRC.

**47. GARANTIE**

- .1 Voir les conditions générales C, section GC32.
- .2 Veiller à ce que toutes les garanties soient adressées au nom de l'entrepreneur et du Conseil national de recherches du Canada.

**48. MANUELS D'ENTRETIEN**

- .1 À la fin des travaux et avant la décharge de garantie, soumettre trois (3) exemplaires bilingues des manuels d'entretien ou deux exemplaires de chacune des versions anglaises et françaises.
- .2 Bien relier les documents dans des cahiers à couverture rigide pour feuilles volantes.
- .3 Les manuels doivent renfermer les instructions d'exploitation et d'entretien, les garanties, les dessins d'atelier, la documentation technique, etc. touchant les matériaux et les appareils fournis aux termes du présent contrat.

**FIN DE SECTION**

## 1. EXIGENCES GÉNÉRALES DE SÉCURITÉ EN CONSTRUCTION

- .1 L'Entrepreneur doit prendre toutes les mesures nécessaires lors de l'exécution du contrat pour protéger le personnel (travailleurs, les visiteurs, le public général, etc...) et la propriété immobilière.
- .2 L'Entrepreneur est le seul responsable pour la sécurité de ses employés, des employés de ses sous-traitants et pour l'initiation, le maintien et la supervision des précautions, programmes et procédures de sécurité en rapport avec l'exécution des travaux.
- .3 L'Entrepreneur doit se conformer à la réglementation et les codes de sécurité Fédéraux, Provinciaux et municipaux et ainsi que toute réglementation provinciale sur la santé et la sécurité au travail. Advenant des conflits entre les dispositions de la législation ou des codes, les dispositions les plus sévères s'appliqueront.
- .4 La révision périodique du travail de l'Entrepreneur par le représentant ministériel en utilisant les critères des documents contractuels ne relève pas l'Entrepreneur de ses responsabilités vis-à-vis la sécurité lors de l'accomplissement des travaux selon les documents contractuels. L'Entrepreneur doit consulter avec le représentant ministériel pour s'assurer que cette responsabilité est acquitte.
- .5 L'Entrepreneur doit s'assurer que seulement des personnes compétentes puissent avoir accès et travailler sur le chantier. Tout au cours du contrat toute personne qui n'observe pas ou n'applique pas les règlements de sécurité pourra être renvoyée du chantier.
- .6 Tous les équipements doivent être sécuritaires en bon état de fonctionnement et appropriés pour la tâche.
- .7 Suivant une évaluation du projet et des risques spécifiques au site des travaux, L'Entrepreneur doit développer un Plan de sécurité spécifique au Site
  - .1 Fournir une affiche montée dans un endroit visible du site du projet contenant les informations suivantes :
    - .1 Avis de Projet
    - .2 Politique de Sécurité Spécifique au site
    - .3 Une copie de Loi provinciale sur la santé et la sécurité au travail
    - .4 Un schéma du bâtiment indiquant toutes les sorties d'urgence
    - .5 Les procédures en cas d'urgence spécifiques au bâtiment.
    - .6 Une liste de contacts pour le CNRC, l'Entrepreneur et tous les sous-traitants impliqués
    - .7 Toutes fiches signalétiques SIMDUT pertinentes
    - .8 Les numéros téléphoniques d'urgence du CNRC
- .8 L'Entrepreneur doit fournir du personnel compétent pour appliquer son programme de sécurité ainsi que tout article applicable de la Loi sur la santé et la sécurité au travail et pour s'assurer que ces directives sont suivies
- .9 L'Entrepreneur doit orienter tous ces employés ainsi que ceux des sous-traitants sous sa juridiction

- .10 Le représentant ministériel exercera une surveillance pour s'assurer que les exigences de sécurité sont rencontrées, que les documents pertinents sont bien remplis et conservés. Le contrat pourra être annulé et l'Entrepreneur ou ses sous-traitants pourront être renvoyés du chantier advenant le non-respect répétitif des standards de sécurité.
- .11 L'Entrepreneur devra rapporter tout accident ou incident qui résulte de l'exécution des travaux par l'Entrepreneur et impliquant l'Entrepreneur, le personnel du CNRC ou le public au représentant ministériel et aux autorités ayant juridiction.
- .12 Si pour effectuer ses travaux, l'entrée dans un laboratoire est requise, l'Entrepreneur devra être fournir une session d'orientation concernant la sécurité et les procédures spécifiques à ce laboratoire à ses employés ainsi qu'à ceux de ses sous-traitants suivant les instructions fournies par le responsable du laboratoire ou le représentant ministériel.

## **2. EXIGENCES DE SÉCURITÉ INCENDIE**

### **.1 Autorité**

- 1. Le Commissaire des incendies du Canada (CIC) est l'autorité en matière de sécurité incendie au CNRC.
- 2. Aux fins du présent document, le représentant ministériel est le représentant de la CNRC en charge du projet.
- 3. Respectez les normes suivantes publiées par le Bureau du commissaire des incendies du Canada:
  - a. Norme 301 'Norme Travaux de construction', juin 1982;
  - b. Norme 302 'Norme Travaux de soudage et de coupage au chalumeau', juin 1982.

### **.2 Usage du Tabac**

- 1. Il est interdit de fumer dans les immeubles du CNRC, ainsi que sur les toits.
- 2. Respectez les écriteaux "DÉFENSE DE FUMER".

### **.3 Travail à chaud**

- .1 Vous devez obtenir un permis de 'Travail à chaud' du représentant ministériel avant d'entreprendre des travaux de soudage, de brasage, de brûlage ou d'utilisation de chalumeaux et de salamandres ou d'une flamme nue.
- .2 Avant le début du travail à chaud, réexaminez l'aire de travaux avec le représentant ministériel pour déterminer le niveau de sécurité incendie nécessaire.

### **.4 Signalisation des Incendies**

- .1 Soyez au courant de l'emplacement exact du téléphone et de l'alarme manuelle d'incendie les plus près, ainsi que le numéro de téléphone d'urgence.

- .2 SIGNALER immédiatement tout incident comportant un feu en procédant comme suit :
  - .1 Déclenchez l'alarme manuelle d'incendie le plus près;
  - .2 Téléphonnez au numéro de téléphone d'urgence qui vous seront fournis à la rencontre initiale de chantier :
- .3 Lorsque vous signalez un incendie par téléphone, indiquez l'endroit exact du feu, le nom et le numéro du bâtiment, et soyez prêts à vérifier le lieu
- .4 La personne qui déclenche l'alarme manuelle d'incendie doit demeurer sur la scène d'incendie pour fournir les renseignements et les indications nécessaires au personnel du service d'incendie.

**.5 Réseaux Détecteurs et Alarmes d'Incendie à l'Intérieur et à l'Extérieur**

- .1 N'OBSTRUEZ PAS ET NE FERMEZ PAS LES RÉSEAUX DÉTECTEURS ET ALARMES D'INCENDIE SANS L'AUTORISATION DU REPRÉSENTANT MINISTÉRIEL..
- .2 LORS D'UNE INTERRUPTION D'UN RÉSEAU AVERTISSEUR, DES MESURES SPÉCIALES DÉFINIES PAR LE REPRÉSENTANT MINISTÉRIEL DOIVENT ÊTRE PRISES POUR S'ASSURER QUE LA PROTECTION INCENDIE SOIT MAINTENUE.
- .3 NE LAISSEZ PAS LES RÉSEAUX DÉTECTEURS ET AVERTISSEURS D'INCENDIE INACTIFS A LA FIN D'UNE JOURNÉE DE TRAVAIL SANS AVOIR AVISÉ LE REPRÉSENTANT MINISTÉRIEL ET OBTENU SON AUTORISATION. LE REPRÉSENTANT MINISTÉRIEL DOIT INFORMER L'API DES DÉTAILS À CHAQUE OCCASION.
- .4 N'UTILISEZ PAS LES BORNES D'INCENDIE NI LES RÉSEAUX DE COLONNES MONTANTES ET ROBINETS ARMÉS À D'AUTRES FINS QUE LA LUTTE CONTRE L'INCENDIE SANS L'AUTORISATION DU REPRÉSENTANT MINISTÉRIEL.

**.6 Extincteurs d'Incendies**

- .1 Fournissez au moins un extincteur à poudre ABC (20 lb) pour chaque site de travail à chaud.
- .2 Fournissez les extincteurs suivants pour les travaux d'asphalte chaud et de toiture:
  - .1 Près du pot de goudron - 1 extincteur à poudre ABC (20 lb);
  - .2 Toiture - 2 extincteurs à poudre ABC (20 lb)..
- .3 Prévoir des extincteurs munis:
  - .1 d'une goupille et d'un sceau;
  - .2 d'un manomètre;
  - .3 d'une étiquette portant la signature d'un préposé d'une compagnie d'entretien d'extincteurs d'incendie.

- .4 d'une étiquette portant la signature d'un préposé d'une compagnie d'entretien d'extincteurs d'incendie.
- .4 Les extincteurs à l'anhydride carbonique (CO) ne sont pas considérés comme des substituts des extincteurs ci-dessus.

## **.7 Travaux de Toiture**

- .1 Chaudières:
  - .1 Prévoyez l'emplacement des chaudières d'asphalte et le lieu d'entreposage avec le représentant ministériel avant la livraison au chantier. N'installez pas les chaudières sur une toiture ou sur un échafaudage et placez-les à une distance d'au moins 10 m (30 pi) de tout bâtiment..
  - .2 Les chaudières doivent être équipées de thermomètres ou de jauges en bon état de fonctionnement.
  - .3 N'utilisez pas les chaudières à des températures excédant 232C (450F).
  - .4 Assurez une surveillance permanente pendant l'usage des chaudières et fournissez des couvercles de métal pour étouffer les flammes en cas de feu dans les chaudières. Fournissez les extincteurs d'incendie exigés à l'article 2.6.
  - .5 Expliquez les capacités des récipients au représentant ministériel avant le début des travaux
  - .6 Ranger les bouteilles de gaz comprimé debout à une distance d'au moins 6M (20 pieds) de la chaudière.
- .2 Balais à franges ('vadrouilles'):
  - .1 N'utilisez que des balais à franges en fibres de verre pour toitures.
  - .2 Enlevez les balais à franges usagés du lieu de travail à la fin de chaque journée de travail.
- .3 Application au chalumeau::
  - .1 N'UTILISEZ PAS DE CHALUMEAUX À PROXIMITÉ DES MURS.
  - .2 N'UTILISEZ PAS DE CHALUMEAUX POUR APPLIQUER DES MEMBRANES SUR DU BOIS EXPOSÉS OU DANS DES CAVITÉS
  - .3 Assurez une surveillance incendie conformément à l'article 2.9 de la présente section.
- .4 Rangez tous les matériaux combustibles utilisés pour les toitures à une distance d'au moins 3 m (10 pi) de toute structure.
- .5 Les bouteilles de gaz doivent être protégées des dommages mécaniques et maintenues en position verticale et à au moins d'au moins 6m (20 pieds) de la chaudière.

## **.8      **Operations de soudure et de meulage****

- .1      L'Entrepreneur doit fournir des couvertures ignifuges, des dispositifs d'extraction de fumée, de écrans et autre équipements similaires pour prévenir l'exposition aux éclairs d'arc de soudure ou étincelles de meulage

## **.9      **Surveillance Incendie****

- .1      Assurez une surveillance incendie pendant au moins une heure après la fin d'une journée de travail à chaud.
- .2      Chauffage provisoire : voir la Section 01000, Instructions générales.
- .3      Dotez les équipes de repérage des incendies des extincteurs prévus à l'article 2.6.

## **.10     **Obstruction des voies d'évacuation des chaussées, des couloirs, des portes et des ascenseurs****

- .1      Aviser le représentant ministériel avant d'entreprendre tout travail qui entraverait le libre passage du personnel du service d'incendie et de son équipement. Cela englobe toute dérogation à la hauteur libre minimale, à l'édification de barricades et au creusage de tranchées.
- .2      Les parcours d'issue du bâtiment ne doivent nullement être obstrués sans la permission expresse du représentant ministériel, qui s'assurera que des parcours de remplacement seront maintenus.
- .3      Le représentant ministériel avisera l'API de tout obstacle pouvant justifier une planification et des dispositifs de communication plus poussés pour assurer la sécurité des occupants et l'efficacité des interventions de lutte contre l'incendie.

## **.11     **Débris et Déchets****

- .1      Limitez autant que possible les détritres et les déchets et les ranger à une distance d'au moins 20 pieds des chaudières ou des torches.
- .2      Il est interdit de faire brûler des détritres sur le chantier.
- .3      Bennes à déchets
  - .1      En consultation avec le représentant ministériel, déterminez un emplacement sûr et acceptable avant de livrer la benne au chantier ou installer des chutes.
  - .2      Ne pas excéder la capacité de remplissage des bennes et garder le périmètre libre de tous débris
- .4      Stockage:
  - .1      Soyez extrêmement prudents lorsque vous devez stocker des déchets combustibles sur les lieux de travail. Maintenez les lieux le plus propre possible et bien ventilés et respectez les normes de sécurité.

- .2 Déposez les torchons et autres matériaux graisseux ou huileux sujets à la combustion spontanée dans des contenants approuvés et évacuez-les comme exigé au paragraphe 3.1.

## **.12 Liquides Inflammables**

- .1 La manutention, le stockage et l'utilisation de liquides inflammables sont régis par le Code national de prévention des incendies du Canada en vigueur.
- .2 Les liquides inflammables comme l'essence, le kérosène et le naphta, peuvent être gardés sur les lieux pour fins d'usage à brève échéance en quantités ne dépassant pas 45 litres (10 Gal Imp.), à condition d'être stockés dans les bidons de sûreté portant le sceau d'approbation des LAC (ULC). Le stockage de plus grandes quantités de liquides inflammables aux fins de l'exécution des travaux qui nécessite l'autorisation du représentant ministériel.
- .3 Il est interdit de laisser des liquides inflammable sur les toits après les heures normales de travail
- .4 Il est interdit de transvaser des liquides inflammables à l'intérieur des bâtiments..
- .5 Il est interdit de transvaser des liquides inflammables à proximité de dispositifs à flamme nue ou de tout autre type de dispositif dégageant de la chaleur.
- .6 Il est interdit d'utiliser des liquides inflammables ayant un point d'éclair inférieur à 38C (100F, tels que le naphta ou l'essence, comme solvants ou agents de nettoyage.
- .7 Stockez les liquides résiduels inflammables dans des récipients approuvés situés dans un endroit sûr bien ventilé. Les déchets constitués de liquides inflammables doivent être régulièrement évacués du chantier.
- .8 Lorsque des liquides inflammables, tels que des laques ou des uréthanes, sont utilisés, veillez à ce que la ventilation soit adéquate et éliminer toute source d'inflammation. Prévenez le représentant ministériel avant le début de tels travaux et une fois les travaux achevés.

## **3. Questions et/ou demandes d'explications**

- .1 Adressez vos questions ou demandes d'explications concernant la sécurité incendie au représentant ministériel.

**END OF SECTION**

## **PART 1 - GENERAL**

- 1.1 RELATED SECTIONS** .1 Section 01 56 00 Temporary Barriers and Enclosures.
- 1.2 REFERENCES** .1 Canadian Standards Association (CSA International)  
.1 CSA S350-M1980 – 2003, Code of Practice for Safety in Demolition of Structures.  
.2 National Building Code (NBC), 2010.

## **PART 2 - PRODUCTS**

- 2.1 NOT USED** .1 Not used.

## **PART 3 - EXECUTION**

- 3.1 PREPARATION** .1 Inspect building with Departmental Representative and verify extent and location of items designated for removal, disposal, alternative disposal, recycling, salvage and items to remain.  
.2 Locate and protect utilities. Preserve active utilities traversing site in operating condition.  
.3 Notify and obtain approval of utility companies before starting demolition.
- 3.2 PROTECTION** .1 Prevent movement, damage to adjacent structures, building systems and parts of building to remain in place. Provide bracing and shoring required.  
.2 Keep noise, dust, and inconvenience to occupants to minimum.  
.3 Protect building systems, services and equipment.  
.4 Provide temporary dust screens, covers, railings, supports and other protection as required.
- 3.3 REMOVALS** .1 Remove items as indicated.

**3.4 DEMOLITION**

- .1 Remove parts of existing building to permit new construction.
- .2 Trim edges of partially demolished building elements to tolerances as defined by Departmental Representative to suit future use.

**3.5 DISPOSAL**

- .1 Dispose of removed materials, to appropriate recycling facilities except where specified otherwise, in accordance with authority having jurisdiction.

**END OF SECTION**

**SCHEDULE A: DESIGNATED SUBSTANCES/ HAZARDOUS MATERIALS** <sup>Note 1</sup>

Environmental Issue <sup>1</sup>	Area of Concern	Required Action
Asbestos-Containing Materials	<p>Friable and non-friable asbestos-containing materials (ACMs) have been identified and are present throughout the project areas located in Building M-2 and Building M-59.</p> <p>These materials are outlined within the Designated Substances and Hazardous Materials Report for this abatement project, referenced in this section.</p> <p>Any disturbance and/or removal of these materials shall be performed by a qualified contractor.</p>	<p>Appropriate asbestos abatement practices must be utilized during the removal of asbestos-containing materials, including the use of proper personal protective equipment, as per Ontario Occupational Health and Safety Act, R.S.O., 1990, O. Reg. 278/05, Designated Substance – Asbestos on Construction Projects and in Buildings and Repair Operations. Asbestos waste is to be disposed of in accordance with O. Reg. 347/90, as amended, General Waste Management.</p> <p>Remove asbestos containing materials in accordance with the requirements of Sections 02 82 00.02 and 02 82 00.03.</p>
Lead	<p>Lead is present in paint and ceramic tile glazing applications throughout the project areas located in Building M-2 and Building M-59 in concentrations that may result in a health risk during work activities. All paints, glazing, and all other surface coatings including structural steel coatings, are considered to be lead-containing in the project areas.</p> <p>Lead is also assumed to be present in the following materials:</p> <ul style="list-style-type: none"> <li>• Solder on the joints of copper piping;</li> <li>• Lead spacers associated with Terrazzo; and</li> <li>• Caulking in cast iron drainpipe joints.</li> </ul>	<p>Remove or disturb lead-containing materials in accordance with O. Reg. 490/09, Designated Substances, as amended and Ontario Ministry of Labour (MoL) - <i>Guideline: Lead on Construction Projects</i>. Lead is to be disposed of in accordance with O. Reg. 347/90, as amended, General Waste Management.</p> <p>No lead-containing material sampling was performed for lead leachate analysis. The disposal of construction waste containing lead is dependent on leachate testing, as governed by O. Reg. 347/90. Contractor is to retain a competent person prior to disposal to classify lead-containing waste streams as hazardous or non-hazardous for disposal purposes, using the Toxicity Characteristic Leachate Procedure (TCLP) at a certified analytical laboratory. All sampling procedures and submissions shall be approved by the NRC Departmental Representative.</p>

Environmental Issue <sup>i</sup>	Area of Concern	Required Action
Mercury	Mercury vapour is present in fluorescent light tubes throughout the project areas located in Building M-2 and Building M-59.	Remove equipment containing mercury for recycling or disposal, as applicable, in accordance with O. Reg. 490/09, as amended, Designated Substances; Ontario MoL document <i>The Safe Handling of Mercury: A Guide for the Construction Industry</i> , and O. Reg. 347/90, as amended, General Waste Management.
Silica	<p>Silica is assumed to be present within the following materials throughout the project areas located in Building M-2 and Building M-59:</p> <ul style="list-style-type: none"> <li>• Lay-in ceiling tiles;</li> <li>• Drywall;</li> <li>• Terracotta brick and mortar;</li> <li>• Plaster;</li> <li>• Ceramic tiles, mortars, and grout;</li> <li>• Brick and mortar; and,</li> <li>• Concrete materials.</li> </ul>	Appropriate work practices must be utilized during the disturbance of these structures in accordance with O. Reg. 490/09, as amended, Designated Substances; and Ontario MoL - <i>Guideline: Silica on Construction Projects</i> .
Polychlorinated Biphenyls (PCBs)	PCBs are assumed present in select fluorescent light fixtures that contain T12 lamps noted in the project areas located in Building M-2 and Building M-59, which are suspected to contain PCB-containing ballasts.	Remove any PCB-containing equipment in accordance with O. Reg. 362/90, as amended; O. Reg. 347/90, and <i>PCB Regulations</i> 2008, as amended; and Transportation of Dangerous Goods Act. All ballasts are to be delivered to Building M-18 at the NRC Complex in Ottawa, Ontario, for disposal by the NRC Departmental Representative.

Note 1: This schedule only summarizes confirmed asbestos-containing materials and other designated substances and hazardous materials. Please refer to the below referenced documents for additional information. All contractors are to verify site conditions, quantities, and hazardous material locations themselves and base their bids upon their own observations and quantity take-offs for visible materials. Contractors are responsible for understanding and confirming scope of work for project prior to removal or disturbance.

**1.2        REFERENCES**

- .1    The presence of Designated Substances and Hazardous Materials are outlined within the following documents:
  - .1    Project-Specific Designated Substances and Hazardous Materials Survey, Buildings M-2 and M-59-Washrooms Renovation Project. Prepared by DST Consulting Engineers, Inc. Dated June 2016.
- .2    Work site may involve contact with the following:
  - .1    Asbestos.
  - .2    Lead.
  - .3    Mercury.
  - .4    Silica.
  - .5    PCBs.
- .3    Canadian Environmental Protection Act, 1999 (CEPA 1999).
  - .1    Export and Import of Hazardous Waste Regulations (SOR/2002-300).
  - .2    Ozone-depleting Substances Regulations, 1998.
  - .3    Federal Halocarbon Regulations, 2003.
- .4    Ontario Environmental Protection Act, R.R.O 1990.
  - .1    General – Waste Management, O. Reg. 347/90, as amended.
- .5    Occupational Health and Safety Act
  - .1    Designated Substances, O.Reg 490/09, as amended
- .6    Health Canada/Workplace Hazardous Materials Information System (WHMIS)
  - .1    Material Safety Data Sheets (MSDS).
- .7    National Fire Code of Canada 2010.
- .8    Transportation of Dangerous Goods Act (TDG Act) 1992, (c. 34).
- .9    Transportation of Dangerous Goods Regulations (T-19.01-SOR/2003-400).

**1.3        DEFINITIONS**

- .1    Dangerous Goods: product, substance, or organism that is specifically listed or meets hazard criteria established in Transportation of Dangerous Goods Regulations.
- .2    Hazardous Material: product, substance, or organism that is used for its original purpose; and that is either dangerous goods or a material that may cause adverse impact to environment or adversely affect health of persons, animals, or plant life when released into the environment.

- .3 Hazardous Material Waste: any hazardous material that is no longer used for its original purpose and that is intended for recycling, treatment or disposal.
- .4 Workplace Hazardous Materials Information System (WHMIS): Canada-wide system designed to give employers and workers information about hazardous materials used in workplace. Under WHMIS, information on hazardous materials is provided on container labels, material safety data sheets (MSDS), and worker education programs. WHMIS is put into effect by combination of federal and provincial laws.

#### **1.4 ACTION AND INFORMATIONAL SUBMITTALS**

- .1 Product Data:
  - .1 Submit manufacturer's instructions, printed product literature and data sheets for hazardous materials and include product characteristics, performance criteria, physical size, finish and limitations.
  - .2 Submit to NRC Departmental Representative current Material Safety Data Sheet (MSDS) for each hazardous material required prior to bringing hazardous material on site.
  - .3 Submit hazardous materials management plan to NRC Departmental Representative that identifies hazardous materials, their use, their location, personal protective equipment requirements, and disposal arrangements.

#### **1.5 DELIVERY, STORAGE, AND HANDLING**

- .1 Co-ordinate storage of hazardous materials with NRC Departmental Representative and abide by internal requirements for labelling and storage of materials and wastes.
- .2 Store and handle hazardous materials and wastes in accordance with applicable federal and provincial laws, regulations, codes, and guidelines.
- .3 Store and handle flammable and combustible materials in accordance with current National Fire Code of Canada requirements.
- .4 Keep no more than 45 litres of flammable and combustible liquids such as gasoline, kerosene and naphtha for ready use.
  - .1 Store flammable and combustible liquids in approved safety cans bearing the Underwriters' Laboratory of Canada or Factory Mutual seal of approval.
  - .2 Storage of quantities of flammable and combustible liquids exceeding 45 litres for work purposes requires the written approval of the NRC Departmental Representative.
- .5 Transfer of flammable and combustible liquids is prohibited within buildings.
- .6 Do not transfer flammable and combustible liquids in vicinity of open flames or heat-producing devices.
- .7 Do not use flammable liquids having flash point below 38 degrees Celsius, such as naphtha or gasoline as solvents or cleaning agents.
- .8 Store flammable and combustible waste liquids for disposal in approved containers located in safe, ventilated area. Keep quantities to minimum.

- .9 Observe smoking regulations, smoking is prohibited in areas where hazardous materials are stored, used, or handled.
- .10 Storage requirements for quantities of hazardous materials and wastes in excess of 5 kg for solids, and 5 litres for liquids:
  - .1 Store hazardous materials and wastes in closed and sealed containers.
  - .2 Label containers of hazardous materials and wastes in accordance with WHMIS.
  - .3 Store hazardous materials and wastes in containers compatible with that material or waste.
  - .4 Segregate incompatible materials and wastes.
  - .5 Ensure that different hazardous materials or hazardous wastes are not mixed.
  - .6 Store hazardous materials and wastes in secure storage area with controlled access.
  - .7 Maintain clear egress from storage area.
  - .8 Store hazardous materials and wastes in location that will prevent them from spilling into environment.
  - .9 Have appropriate emergency spill response equipment available near storage area, including personal protective equipment.
  - .10 Maintain inventory of hazardous materials and wastes, including product name, quantity, and date when storage began.
- .11 Ensure personnel have been trained in accordance with Workplace Hazardous Materials Information System (WHMIS) requirements.
- .12 Report spills or accidents immediately to NRC Departmental Representative. Submit a written spill report to NRC Departmental Representative within 24 hours of incident.

## **1.6 TRANSPORTATION**

- .1 Transport hazardous materials and wastes in accordance with federal Transportation of Dangerous Goods Act, Transportation of Dangerous Goods Regulations, and applicable provincial regulations.
- .2 If exporting hazardous waste to another country, ensure compliance with federal Export and Import of Hazardous Waste Regulations.
- .3 If hazardous waste is generated on site:
  - .1 Co-ordinate transportation and disposal with NRC Departmental Representative.
  - .2 Ensure compliance with applicable federal, provincial and municipal laws and regulations for generators of hazardous waste.
  - .3 Use licensed carrier authorized by provincial authorities to accept subject material.
  - .4 Prior to shipping material obtain written notice from intended hazardous waste treatment or disposal facility that it will accept material and that it is licensed to accept this material.
  - .5 Label container[s] with legible, visible safety marks as prescribed by federal and provincial regulations.

- .6 Ensure that trained personnel handle, offer for transport, or transport dangerous goods.
- .7 Provide photocopy of shipping documents and waste manifests to NRC Departmental Representative.
- .8 Track receipt of completed manifest from consignee after shipping dangerous goods. Provide a photocopy of completed manifest to Departmental Representative.
- .9 Report discharge, emission, or escape of hazardous materials immediately to NRC Departmental Representative and appropriate provincial authority. Take reasonable measures to control release.

## **Part 2 Products**

### **2.1 MATERIALS**

- .1 Only bring on site quantity of hazardous materials required to perform work.
- .2 Maintain MSDS in proximity to where materials are being used. Communicate this location to personnel who may have contact with hazardous materials.

## **Part 3 Execution**

### **3.1 DISPOSAL**

- .1 Dispose of hazardous waste materials in accordance with applicable federal and provincial acts, regulations, and guidelines.
- .2 Recycle hazardous wastes for which there is approved, cost effective recycling process available.
- .3 Send hazardous wastes to authorized hazardous waste disposal or treatment facilities.
- .4 Burning, diluting, or mixing hazardous wastes for purpose of disposal is prohibited.
- .5 Disposal of hazardous materials in waterways, storm or sanitary sewers, or in municipal non-hazardous solid waste landfills is prohibited.
- .6 Dispose of hazardous wastes in timely fashion in accordance with applicable provincial regulations.
- .7 Minimize generation of hazardous waste to maximum extent practicable. Take necessary precautions to avoid mixing clean and contaminated wastes.
- .8 Identify and evaluate recycling and reclamation options as alternatives to land disposal, such as:
  - .1 Hazardous wastes recycled in manner constituting disposal.
  - .2 Hazardous waste burned for energy recovery.
  - .3 Lead-acid battery recycling.
  - .4 Hazardous wastes with economically recoverable precious metals.

**END OF SECTION**

**Part 1 General**

**1.1 SUMMARY**

- .1 All removal or disturbance of asbestos-containing materials within Rooms 105 and 106 at the M-59 Building, and Rooms 147 and 148 at the M-2 Building shall comply with requirements of this Section when performing following Work:
  - .1 Removal or disturbance of all materials referred to in Item 1.8 - Existing Conditions to accommodate required work within the above noted rooms.
    - .1 All asbestos-containing pipe insulation above the drop-ceiling within the work area in Rooms 147/148 at the M-2 Building is to be removed.
  - .2 The removal or disturbance of one square metre or less of friable asbestos-containing material, including wall plaster or ceiling plaster (considered friable when disturbed).
  - .3 Removing non-friable asbestos containing materials by breaking, cutting, drilling, abrading, grinding, sanding or vibrating if the material is not wetted to control the spread of dust or fibres, and the work is done only by means of non-powered hand-held tools.
  - .4 Removing non-friable asbestos containing materials by breaking, cutting, drilling, abrading, grinding, sanding or vibrating if the work is done by means of power tools that are attached to dust-collecting devices equipped with HEPA filters.
  - .5 Glove bag and removal of good condition, friable, asbestos-containing material.
- .2 Refer to the following document for details on asbestos containing materials:
  - .1 Project-Specific Designated Substances and Hazardous Materials Survey, Buildings M-2 and M-59-Washrooms Renovation Project. Prepared by DST Consulting Engineers, Inc. Dated June 2016.

    - .3 O.Reg 213/91 - “Construction Projects”, as amended.

#### **1.4 DEFINITIONS**

- .1 Amended Water: water with non-ionic surfactant wetting agent added to reduce surface tension of water to allow wetting of fibres.
- .2 Asbestos-Containing Materials (ACMs): materials that contain 0.5 percent or more asbestos by dry weight, identified under Existing Conditions Article, including fallen materials and settled dust.
- .3 Asbestos Work Area: area where work takes place which will, or may disturb ACMs.
- .4 Authorized Visitors: NRC Departmental Representative, DST Representative, and representative(s) of regulatory agencies.
- .5 Competent worker: in relation to specific work, means a worker who:
  - .1 Is qualified because of knowledge, training and experience to perform the work.
  - .2 Is familiar with the provincial laws and with the provisions of the regulations that apply to the work.
  - .3 Has knowledge of all potential or actual danger to health or safety in the work.
- .6 Curtained doorway: arrangement of closures to allow ingress or egress from one room to another while permitting minimal air movement between rooms, typically constructed as follows:
  - .1 Place two overlapping sheets of polyethylene over existing or temporarily framed doorway, secure each along top of doorway, secure vertical edge of one sheet along one vertical side of doorway, and secure vertical edge of other sheet along opposite vertical side of doorway.
  - .2 Reinforce free edges of polyethylene with duct tape and weight bottom edge to ensure proper closing.
  - .3 Overlap each polyethylene sheet at openings not less than 1.5 metres on each side.

- .7 DOP Test: testing method used to determine integrity of Negative Pressure unit using Dispersed Oil Particulate (DOP) HEPA-filter leak test.
- .8 Friable Material: material that when dry can be crumbled, pulverized or powdered by hand pressure and includes such material that is crumbled, pulverized or powdered.
- .9 Glove Bag: prefabricated glove bag as follows:
  - .1 Minimum thickness 0.25 mm (10 mil) polyvinyl-chloride bag.
  - .2 Integral 0.25 mm (10 mil) thick polyvinyl-chloride gloves and elastic ports.
  - .3 Equipped with reversible, double-pull, double throw zipper on top and at approximately mid-section of the bag.
  - .4 Straps for sealing ends around pipe.
  - .5 Must incorporate internal closure strip if it is to be moved or used in more than one specific location.
- .10 Hazardous Material Workplan: A brief report identifying the location and quantities of hazardous materials and the methods that will be used to remove, store, transport and dispose of them.
- .11 HEPA vacuum: DOP tested, High Efficiency Particulate Air filtered vacuum equipment with filter system capable of collecting and retaining fibres greater than 0.3 microns in any dimension at 99.97% efficiency.
- .12 Non-Friable Material: material that when dry cannot be crumbled, pulverized or powdered by hand pressure.
- .13 Polyethylene: polyethylene sheeting or rip proof polyethylene sheeting with tape along edges, around penetrating objects, over cuts and tears, and elsewhere as required to provide protection and isolation.
- .14 Occupied Area: any area of building or work site that is outside Asbestos Work Area.
- .15 Sprayer: garden reservoir type sprayer or airless spray equipment capable of producing mist or fine spray. Must have appropriate capacity for scope of work.

## **1.5 ACTION AND INFORMATION SUBMITTALS**

- .1 Submit proof satisfactory to the NRC Departmental Representative that suitable arrangements have been made to dispose of asbestos-containing waste in accordance with requirements of authority having jurisdiction.
- .2 Submit Provincial/Territorial and/or local requirements for Notice of Project Form.
- .3 Submit proof of Contractor's Asbestos Liability Insurance.
- .4 Submit to the NRC Departmental Representative necessary permits for transportation and disposal of asbestos-containing waste and proof that asbestos-containing waste has been received and properly disposed.
- .5 Submit proof that all asbestos workers and/or supervisor have received appropriate training and education by a competent person in the hazards of asbestos exposure, good personal hygiene and work practices while working in Asbestos Work Areas, and the use, cleaning and disposal of respirators and protective clothing.

- .6 Submit proof that supervisory personnel have attended asbestos abatement course, of not less than two days duration, approved by NRC Departmental Representative. Minimum of one supervisor for every ten workers.
- .7 Submit Worker's Compensation Board status and transcription of insurance.
- .8 Submit documentation including test results, fire and flammability data, and Material Safety Data Sheets (MSDS) for chemicals or materials including:
  - .1 encapsulants;
  - .2 amended water;
  - .3 slow-drying sealer.
- .9 Submit proof satisfactory to NRC Departmental Representative that employees have appropriate respirator fitting and testing (fit test certificates). Workers must be fit tested (qualitative as a minimum for Half-face respirator, quantitative for Full-face respirator) with respirator that is personally issued.
- .10 Asbestos abatement section within Hazardous Material Work Plan.

## **1.6 QUALITY ASSURANCE**

- .1 Regulatory Requirements: comply with Federal, Provincial/Territorial and local requirements pertaining to asbestos, provided that in case of conflict among these requirements or with these specifications more stringent requirement applies. Comply with regulations in effect at the time work is performed.
- .2 Health and Safety:
  - .1 Safety Requirements: worker and visitor protection.
    - .1 Protective equipment and clothing to be worn by workers while in Asbestos Work Area include:
      - .1 As a minimum, air purifying respirator with N-100, R-100 or P-100 particulate filter(s), personally issued to worker and marked as to efficiency and purpose, suitable for protection against asbestos and acceptable to Provincial Authority having jurisdiction. The respirator to be fitted so that there is an effective seal between the respirator and the worker's face, unless the respirator is equipped with a hood or helmet. The respirator to be cleaned, disinfected and inspected after use on each shift, or more often if necessary, when issued for the exclusive use of one worker, or after each use when used by more than one worker. The respirator to have damaged or deteriorated parts replaced prior to being used by a worker; and, when not in use, to be stored in a convenient, clean and sanitary location. The employer to establish written procedures regarding the selection, use and care of respirators, and a copy of the procedures to be provided to and reviewed with each worker who is required to wear a respirator. A worker not to be assigned to an operation requiring the use of a respirator unless he or she is physically able to perform the operation while using the respirator.

- .2 Disposable-type protective clothing (high-density polyethylene protective clothing (Tyvek or similar, as approved by Client/Client Representative) that does not readily retain or permit penetration of asbestos fibres. Protective clothing to be provided by the employer and worn by every worker who enters the work area, and the protective clothing shall consist of a head covering and full body covering that fits snugly at the ankles, wrists and neck, in order to prevent asbestos fibres from reaching the garments and skin under the protective clothing to include suitable footwear, and to be repaired or replaced if torn.
- .3 Eating, drinking, chewing, and smoking are not permitted in Asbestos Work Area.
- .4 Before leaving Asbestos Work Area, the worker can decontaminate his or her protective clothing by using a vacuum equipped with a HEPA filter, or by damp wiping, before removing the protective clothing, or, if the protective clothing will not be reused, place it in a container for dust and waste. The container to be dust tight, suitable for asbestos waste, impervious to asbestos, identified as asbestos waste, cleaned with a damp cloth or a vacuum equipped with a HEPA filter immediately before removal from the work area, and removed from the work area frequently and at regular intervals.
- .5 Ensure workers wash hands and face when leaving Asbestos Work Area. Facilities for washing hands and face shall be provided within or close to the Asbestos Work Area.
- .6 Ensure that no person required to enter an Asbestos Work Area has facial hair that affects seal between respirator and face.
- .7 Visitor Protection:
  - .1 Provide protective clothing and approved respirators to Authorized Visitors to work areas.
  - .2 Instruct Authorized Visitors in the use of protective clothing, respirators and procedures.
  - .3 Instruct Authorized Visitors in proper procedures to be followed in entering into and exiting from Asbestos Work Area.

## **1.7 WASTE MANAGEMENT AND DISPOSAL**

- .1 Remove from site and dispose of packaging materials at appropriate recycling facilities.
- .2 Collect and separate for disposal paper, plastic, polystyrene, corrugated cardboard, packaging material in appropriate on-site bins for recycling in accordance with Waste Management Plan.
- .3 Separate for reuse, and recycling and place in designated containers steel, metal, plastic waste in accordance with Waste Management Plan.
- .4 Place materials defined as hazardous or toxic in designated containers.
- .5 Handle and dispose of hazardous materials in accordance with the CEPA, TDGA, Regional and Municipal regulations.
- .6 Fold up metal banding, flatten and place in designated area for recycling.

- .7 Disposal of asbestos waste generated by removal activities must comply with Federal, Provincial, Territorial and Municipal regulations. Dispose of asbestos waste in sealed double thickness 0.15 mm thick bags or leak proof drums. Label containers with appropriate warning labels.
- .8 Provide waste manifests describing and listing waste created. Transport containers by approved means to licensed landfill for burial. All waste landfill manifests are to be provided to the NRC Departmental Representative at the end of the project.

## **1.8 EXISTING CONDITIONS**

- .1 Refer to the following document which is bound to this Specification and forms part of the tender documents package, for details on materials containing asbestos to be handled, removed, or otherwise disturbed and disposed of during this Project:
  - .1 Project-Specific Designated Substances and Hazardous Materials Survey, Buildings M-2 and M-59-Washrooms Renovation Project. Prepared by DST Consulting Engineers, Inc. Dated June 2016.
- .2 Verification of visible quantities of asbestos-containing materials and site conditions are the responsibility of the bidding contractor. Contractors are to verify all site conditions themselves and base their abatement bids upon their own observations and quantity take-offs. Bidding contractors are to draw their own conclusions with respect to site conditions and/or factors that may affect their work.
- .3 Notify NRC Departmental Representative of asbestos-containing material discovered during Work and not apparent from drawings, specifications, or report pertaining to Work. Do not disturb such material pending instructions from NRC Departmental Representative.
- .4 Wall and ceiling plaster within Room 105 of the M-29 Building is assumed to be asbestos-containing.
- .5 Wall parging above drop ceiling height in Room 106 is assumed to be asbestos-containing.

## **1.9 SCHEDULING**

- .1 Hours of Work: perform work involving asbestos abatement located at the Building during hours specified by NRC Departmental Representative.

## **1.10 PERSONNEL TRAINING**

- .1 Before beginning Work, provide NRC Departmental Representative satisfactory proof that every worker has had instruction and training in hazards of asbestos exposure, in personal hygiene and work practices, and in use, cleaning, and disposal of respirators and protective clothing.
- .2 Instruction and training related to respirators includes, at minimum:
  - .1 Fitting of equipment.
  - .2 Inspection and maintenance of equipment.
  - .3 Disinfecting of equipment.

- .4 Limitations of equipment.
- .3 Instruction and training must be provided by competent, qualified person.

## **Part 2 Products**

### **2.1 MATERIALS**

- .1 Drop and Enclosure Sheets.
  - .1 Polyethylene: 0.15 mm thick.
  - .2 FR polyethylene: 0.15 mm thick woven fibre reinforced fabric bonded both sides with polyethylene.
- .2 Wetting Agent: 50% polyoxyethylene ester and 50% polyoxyethylene ether mixed with water in concentration to provide thorough wetting of asbestos-containing material.
- .3 Waste Containers: contain waste in two separate containers.
  - .1 Inner container: 0.15 mm thick sealable polyethylene bag
  - .2 Outer container: sealable metal or fibre type where there are sharp objects included in waste material; otherwise outer container may be sealable metal or fibre type or second 0.15 mm thick sealable polyethylene bag.
  - .3 Labelling requirements: affix preprinted cautionary asbestos warning, in both official languages, that is visible when ready for removal to disposal site.
- .4 Glove Bag: prefabricated glove bag as follows:
  - .1 Minimum thickness 0.25 mm (10 mil) polyvinyl-chloride bag.
  - .2 Integral 0.25 mm (10 mil) thick polyvinyl-chloride gloves and elastic ports.
  - .3 Equipped with reversible, double-pull, double throw zipper on top and at approximately mid-section of the bag.
  - .4 Straps for sealing ends around pipe.
  - .5 Must incorporate internal closure strip if it is to be moved or used in more than one specific location.
- .5 Tape: tape suitable for sealing polyethylene to surfaces under both dry and wet conditions using amended water.
- .6 Slow - drying sealer: non-staining, clear, water - dispersible type that remains tacky on surface for at least 8 hours and designed for purpose of trapping residual asbestos fibres.
  - .1 Sealer: flame spread and smoke developed rating less than 50.
- .7 Encapsulant: penetrating type conforming to CAN/CGSB-1.205.

## **Part 3 Execution**

### **3.1 SUPERVISION**

- .1 Minimum of one Supervisor for every ten workers is required.

- .2 Approved Supervisor must remain within Asbestos Work Area during disturbance, removal, or other handling of asbestos-containing materials.

### **3.2 PROCEDURES**

- .1 All exterior asbestos-abatement work that requires workers to wear disposable type protective clothing and respirators shall be obstructed from public view through the use of visual barriers.
- .2 Before beginning Work, at each access to Asbestos Work Area, install warning signs in both official languages in upper case 'Helvetica Medium' letters reading as follows, where number in parentheses indicates font size to be used: 'CAUTION ASBESTOS HAZARD AREA (25 mm) / NO UNAUTHORIZED ENTRY (19 mm) / WEAR ASSIGNED PROTECTIVE EQUIPMENT (19 mm) / BREATHING ASBESTOS DUST MAY CAUSE SERIOUS BODILY HARM (7 mm)'.
  - .1 Use HEPA vacuum, or damp cloths where damp cleaning does not create hazard and is otherwise appropriate.
  - .2 Do not use compressed air to clean up or remove dust from any surface.
- .3 Before beginning Work remove visible dust from surfaces in work area where dust is likely to be disturbed during course of work.
  - .1 Use FR polyethylene drop sheets over flooring such as carpeting that absorbs dust and over flooring in work areas where dust or contamination cannot otherwise be safely contained.
  - .2 Erect enclosure of polyethylene sheeting around indoor Type 2 work areas, shut off mechanical ventilation system serving work area, and seal ventilation ducts to and from work area. Exterior abatement work areas shall be separated from other areas using visual barriers that prevent members of the public from viewing abatement work operations.
- .5 Remove loose material by HEPA vacuum; thoroughly wet friable material containing asbestos to be removed or disturbed before and during Work unless wetting creates hazard or causes damage.
  - .1 Use garden reservoir type low - velocity sprayer or airless spray equipment capable of producing mist or fine spray.
  - .2 Perform Work in a manner to reduce dust creation to lowest levels practicable.
- .6 Pipe Insulation Removal Using Glove Bag:
  - .1 A glove bag not to be used to remove insulation from a pipe, duct or similar structure if:
    - .1 It may not be possible to maintain a proper seal for any reason including, without limitation:
    - .2 The condition of the insulation.
    - .3 The temperature of the pipe, duct or similar structure.
    - .4 The bag could become damaged for any reason including, Including, without limitation:

- .1 The type of jacketing.
  - .2 The temperature of the pipe, duct or similar Structure.
- .2 Upon installation of the glove bag, inspect bag for any damage or defects. If any damage or defects are found, the glove bag is to be repaired or replaced. The glove bag to be inspected at regular intervals for damage and defects, and repair or replaced, as appropriately. The asbestos containing contents of the damaged or defective glove bag found during removal are to be wetted and the glove bag and its contents are to be removed and disposed of in an appropriate waste disposal container. Any damaged or defective glove bags are not be reused.
- .3 Place tools necessary to remove insulation in tool pouch. Wrap bag around pipe and close zippers. Seal bag to pipe with cloth straps.
- .4 Place hands in gloves and use necessary tools to remove insulation. Arrange insulation in bag to obtain full capacity of bag.
- .5 Insert nozzle of garden reservoir type sprayer into bag through valve and wash down pipe and interior of bag thoroughly. Wet surface of insulation in lower section of bag.
- .6 To remove bag after completion of stripping, wash top section and tools thoroughly. Remove air from top section through elasticized valve using a HEPA vacuum. Pull polyethylene waste container over glove bag before removing from pipe. Release one strap and remove freshly washed tools. Place tools in water. Remove second strap and zipper. Fold over into waste container and seal.
- .7 After removal of bag ensure that pipe is free of residue. Remove residue using HEPA vacuum or wet cloths. Ensure that surfaces are free of sludge which after drying could release asbestos dust into atmosphere. Seal exposed surfaces of pipe and ends of insulation with slow drying sealer to seal in any residual fibres.
- .8 Upon completion of Work shift, cover exposed ends of remaining pipe insulation with polyethylene taped in place.
- .7 Work is subject to visual inspection and air monitoring. Contamination of surrounding areas indicated by visual inspection or air monitoring will require complete enclosure and clean-up of affected areas at no additional costs to owners.
- .8 Clean-up:
  - .1 Frequently during Work and immediately after completion of work, clean up dust and asbestos-containing waste using HEPA vacuum or by damp mopping.
  - .2 Place dust and asbestos-containing waste in sealed dust-tight waste bags. Treat drop sheets and disposable protective clothing as asbestos waste and wet and fold to contain dust and then place in waste bags.
  - .3 Immediately before their removal from Asbestos Work Area and disposal, clean each filled waste bag using damp cloths or HEPA vacuum and place in second clean waste bag.
  - .4 Seal and remove double-bagged waste from site. Dispose of in accordance with requirements of Provincial/Territorial and Federal

authority having jurisdiction. Supervise dumping and ensure that dump operator is fully aware of hazardous nature of material to be dumped and that guidelines and regulations for asbestos disposal are followed.

- .5 Perform final thorough clean-up of Asbestos Work Areas and adjacent areas affected by Work using HEPA vacuum.

### **3.3 AIR MONITORING**

- .1 From beginning of Work until completion of cleaning operations, the NRC Departmental Representative may collect air samples on a daily basis outside of Asbestos Work Area enclosures.
- .2 If air monitoring shows that areas outside work area enclosures are contaminated, enclose, maintain, and clean these areas in same manner as that applicable to Asbestos Work Areas
  - .1 Stop work and clean areas outside of Asbestos Work Areas when Phased Contrast Microscopy measurements exceed 0.05 fibres per cubic centimetre (f/cc) and correct procedures.
  - .2 All required cleaning, re-cleaning, additional air testing and/or inspections will be performed at no extra charge to the Client.
- .3 Ensure that respiratory safety factors for Workers are not exceeded.
- .4 The NRC Departmental Representative may collect clearance/post-abatement air samples following a final visual inspection of the Asbestos Work Area by the NRC Departmental Representative. Samples will be analyzed and compared to applicable regulations.
  - .1 Final air monitoring results must show fibre levels of less than 0.05 fibres per cubic centimetre (f/cc).
  - .2 If air monitoring shows that areas inside the Asbestos Work Area enclosures are contaminated; enclose, maintain and clean these areas in same manner as that applicable to Asbestos Work Area at no additional cost to the client.
  - .3 Repeat as necessary until fibre levels are less than 0.05 f/cc
  - .4 No additional costs will be allowed by Contractor for additional labour or materials required to provide specified performance level.

**END OF SECTION**

**Part 1      General**

**1.1      SECTION INCLUDES**

- .1 All removal or disturbance of asbestos-containing materials within Rooms 104, 115, 128 and 129 at the M-59 Building, and Rooms 124, 133, and 271 at the M-2 Building, shall comply with requirements of this Section when performing following work:
  - .1 Removal or disturbance of all materials referred to in Item 1.8 - Existing Conditions to accommodate required work within the above noted rooms.
  - .2 All asbestos-containing piping insulation within the above noted rooms shall be removed including concealed insulation on domestic hot and cold water piping within wall cavities.
  - .3 Breaking, cutting, drilling, abrading, grinding, sanding or vibrating of asbestos containing materials, if the work is done by means of power tools that are not attached to dust-collecting devices equipped with HEPA filters.
  - .4 Asbestos containing mastic and levelling compound in Room 133 shall be removed however necessary (including grinding if required) to meet manufacturer requirements for new flooring adhesive.
  - .5 All asbestos-containing friable grey cement compound (GCC) on ductwork within Room 104 at the M-59 Building is to be removed.
- .2 Refer to the following document for details on asbestos containing materials:
  - .1 Project-Specific Designated Substances and Hazardous Materials Survey, Buildings M-2 and M-59-Washrooms Renovation Project. Prepared by DST Consulting Engineers, Inc. Dated June 2016.

  - .1 Transportation of Dangerous Goods Act, 1992 (TDGA).
- .6 Ontario Environmental Protection Act, R.R.O 1990,

- .1 General – Waste Management, O. Reg. 347/90, as amended.
- .7 Underwriters' Laboratories of Canada (ULC).
- .8 Ontario Ministry of Labour (MoL).
  - .1 Occupational Health and Safety Act, R.S.O 1990, c. O1 (OSHA)
    - .1 O.Reg. 278/05 – Designated Substance – Asbestos on Construction Projects and in Buildings and Repair Operations, as amended.
    - .2 O.Reg. 490/09 – Designated Substances
    - .3 O.Reg. 213/91 - “Construction Projects”, as amended

#### **1.4 DEFINITIONS**

- .1 Airlock: system for permitting ingress or egress without permitting air movement between contaminated area and uncontaminated area, typically consisting of two curtained doorways at least 2 m apart.
- .2 Amended Water: water with a non-ionic surfactant wetting agent added to reduce surface tension of water to allow wetting of fibres.
- .3 Asbestos-Containing Materials (ACMs): materials that contain 0.5 percent or more asbestos by dry weight, identified under Existing Conditions Article, including fallen materials and settled dust.
- .4 Asbestos Work Area: Area where actual removal and sealing and enclosure of spray or trowel-applied asbestos-containing materials takes place.
- .5 Authorized Visitors: NRC Departmental Representative, DST Representative, and representative(s) of regulatory agencies.
- .6 Competent worker: in relation to specific work, means a worker who:
  - .1 Is qualified because of knowledge, training and experience to perform the work.
  - .2 Is familiar with the provincial laws and with the provisions of the regulations that apply to the work.
  - .3 Has knowledge of all potential or actual danger to health or safety in the work.
- .7 Curtained doorway: arrangement of closures to allow ingress and egress from one room to another while permitting minimal air movement between rooms, typically constructed as follows:
  - .1 Place two overlapping sheets of polyethylene over existing or temporarily framed doorway, secure each along top of doorway, secure vertical edge of one sheet along one vertical side of doorway, and secure vertical edge of other sheet along opposite vertical side of doorway.
  - .2 Reinforce free edges of polyethylene with duct tape and weight bottom edge to ensure proper closing.
  - .3 Overlap each polyethylene sheet at openings not less than 1.5 m on each side.
- .8 DOP Test: testing method used to determine integrity of Negative Pressure unit using dispersed oil particulate (DOP) HEPA filter leak test.

- .9 Friable Material: material that when dry can be crumbled, pulverized or powdered by hand pressure and includes such material that is crumbled, pulverized or powdered.
- .10 Glove Bag: prefabricated glove bag as follows:
  - .1 Minimum thickness 0.25 mm (10 mil) polyvinyl-chloride bag.
  - .2 Integral 0.25 mm (10 mil) thick polyvinyl-chloride gloves and elastic ports.
  - .3 Equipped with reversible, double-pull, double throw zipper on top and at approximately mid-section of the bag.
  - .4 Straps for sealing ends around pipe.
- .11 Hazardous Material Work Plan: A brief report identifying the location and quantities of hazardous materials and the methods that will be used to remove, store, transport and dispose of them.
- .12 HEPA vacuum: DOP tested, High Efficiency Particulate Air filtered vacuum equipment with a filter system capable of collecting and retaining fibres greater than 0.3 microns in any direction at 99.97% efficiency.
- .13 Negative pressure: DOP tested system that extracts air directly from work area, filters such extracted air through High Efficiency Particulate Air filtering system, and discharges this air directly outside work area to exterior of building.
  - .1 System to maintain minimum pressure differential of 5 Pa relative to adjacent areas outside of work areas, be equipped with alarm to warn of system breakdown, and be equipped with instrument to continuously monitor and automatically record pressure differences.
- .14 Non-Friable Materials: material that when dry cannot be crumbled, pulverized or powdered by hand pressure.
- .15 Occupied Area: any area of building or work site that is outside Asbestos Work Area.
- .16 Polyethylene sheeting sealed with tape: Polyethylene sheeting of type and thickness specified sealed with tape along edges, around penetrating objects, over cuts and tears, and elsewhere as required to provide continuous polyethylene membrane to protect underlying surfaces from water damage or damage by sealants, and to prevent escape of asbestos fibres through sheeting into clean area.
- .17 Sprayer: garden reservoir type sprayer or airless spray equipment capable of producing mist or fine spray. Must be appropriate capacity for scope of work.

## **1.5 ACTION AND INFORMATIONAL SUBMITTALS**

- .1 Before beginning work:
  - .1 Obtain from appropriate agency and submit to NRC Departmental Representative necessary permits for transportation and disposal of asbestos waste. Ensure that dump operator is fully aware of hazardous nature of material being dumped, and proper methods of disposal. Submit proof satisfactory to NRC Departmental Representative that suitable arrangements have been made to receive and properly dispose of asbestos waste.
  - .2 Submit proof satisfactory to NRC Departmental Representative that every worker involved in a Type 3 operation has successfully completed the

Asbestos Abatement Worker Training Program approved by the Ministry of Training, Colleges and Universities and every supervisor of a worker involved in a Type 3 operation has successfully completed the Asbestos Abatement Supervisor Training Program approved by the Ministry of Training, Colleges and Universities as outlined in O. Reg. 278/05, s. 20 (1). Submit proof of attendance in form of certificate.

- .3 Ensure supervisory personnel have attended asbestos abatement course, of not less than two days duration, approved by NRC Departmental Representative. Submit proof of attendance in form of certificate. Minimum of one Supervisor for every ten workers.
- .4 Submit documentation including test results for sealer proposed for use.
- .5 Submit Provincial/Territorial and/or local requirements for Notice of Project Form.
- .6 Submit proof of Contractor's Asbestos Liability Insurance.
- .7 Submit proof satisfactory to NRC Departmental Representative that employees have appropriate respirator fitting and testing. Workers must be fit-tested (**quantitative**) with respirator that is personally issued.
- .8 Submit documentation including air test results for compressor to be used for supplied air respirators.
- .9 Submit Worker's Compensation Board status and transcription of insurance.
- .10 Submit documentation including test results, fire and flammability data, and Material Safety Data Sheets (MSDS) for chemicals or materials including but not limited to following:
  - .1 amended water;
  - .2 slow-drying sealer.
- .11 Submit Asbestos Abatement section within Hazardous Material Work Plan.

## 1.6 QUALITY ASSURANCE

- .1 Regulatory Requirements: comply with Federal, Provincial/Territorial and local requirements pertaining to asbestos, provided that in case of conflict among those requirements or with these specifications more stringent requirement applies. Comply with regulations in effect at time work is performed.
- .2 Health and Safety:
  - .1 Safety Requirements: worker and visitor protection.
    - .1 Protective equipment and clothing to be worn by workers while in Asbestos Work Area includes:
      - .1 As a minimum, full-face respirator equipped with HEPA P-100 filter cartridges. Respirators shall be personally issued to worker and marked as to efficiency and purpose, suitable for protection against asbestos and acceptable to Provincial Authority having jurisdiction.
      - .2 All respirators to be fitted so that there is an effective seal between the respirator and the worker's face, unless the respirator is equipped with a hood or helmet. The respirators are to be cleaned, disinfected and inspected after use on each shift, or more often if necessary, when

issued for the exclusive use of one worker, or after each use when used by more than one worker. The respirators to have damaged or deteriorated parts replaced prior to being used by a worker; and, when not in use, to be stored in a convenient, clean and sanitary location. The employer to establish written procedures regarding the selection, use and care of respirators, and a copy of the procedures to be provided to and reviewed with each worker who is required to wear a respirator. A worker not to be assigned to an operation requiring the use of a respirator unless he or she is physically able to perform the operation while using the respirator.

- .3 Disposable-type protective clothing (high-density polyethylene protective clothing (Tyvek or similar, as approved by NRC Representative) that does not readily retain or permit penetration of asbestos fibres. Protective clothing to be provided by the employer and worn by every worker who enters the work area, and the protective clothing shall consist of a head covering and full body covering that fits snugly at the ankles, wrists and neck, in order to prevent asbestos fibres from reaching the garments and skin under the protective clothing to include suitable footwear, and to be repaired or replaced if torn
- .2 Requirements for each worker:
    - .1 Remove street clothes in clean change room and put on respirator with new filters or reusable filters that have been tested as satisfactory, clean coveralls and head covers before entering Equipment and Access Rooms or Asbestos Work Area. Store street clothes, uncontaminated footwear, towels, and similar uncontaminated articles in clean change room.
    - .2 Remove gross contamination from clothing before leaving work area then proceed to Equipment and Access Room and remove clothing except respirators. Place contaminated worksuits in receptacles for disposal with other asbestos - contaminated materials. Leave reusable items except respirator in Equipment and Access Room. Still wearing the respirator proceed naked to showers. Using soap and water wash body and hair thoroughly. Clean outside of respirator with soap and water while showering; remove respirator; remove filters and wet them and dispose of filters in container provided for purpose; and wash and rinse inside of respirator. When not in use in work area, store work footwear in Equipment and Access Room. Upon completion of asbestos abatement, dispose of footwear as contaminated waste or clean thoroughly inside and out using soap and water before removing from work area or from Equipment and Access Room.
    - .3 After showering and drying off, proceed to clean change room and dress in street clothes at end of each day's work, or in clean coveralls before eating, smoking, or drinking. If

- re-entering work area, follow procedures outlined in paragraphs above.
- .4 Enter unloading room from outside dressed in clean coveralls to remove waste containers and equipment from Holding Room of Container and Equipment Decontamination Enclosure system. Workers must not use this system as means to leave or enter work area.
  - .3 Eating, drinking, chewing, and smoking are not permitted in Asbestos Work Area.
  - .4 Ensure workers are fully protected with respirators and protective clothing during preparation of system of enclosures prior to commencing actual asbestos abatement.
  - .5 Provide and post in Clean Change Room and in Equipment and Access Room the procedures described in this Section, in both official languages.
  - .6 Ensure that no person required to enter an Asbestos Work Area has facial hair or other facial condition that affects seal between respirator and face.
  - .7 Visitor Protection:
    - .1 Provide protective clothing and approved respirators to Authorized Visitors to work areas.
    - .2 Instruct Authorized Visitors in the use of protective clothing, respirators and procedures.
    - .3 Instruct Authorized Visitors in proper procedures to be followed in entering into and exiting from Asbestos Work Area.

## **1.7 WASTE MANAGEMENT AND DISPOSAL**

- .1 Remove from site and dispose of packaging materials at appropriate recycling facilities.
- .2 Collect and separate for disposal paper, plastic, polystyrene, corrugated cardboard, packaging material in appropriate on-site bins for recycling in accordance with Waste Management Plan.
- .3 Separate for reuse, and recycling and place in designated containers steel, metal, plastic waste in accordance with Waste Management Plan.
- .4 Place materials defined as hazardous or toxic in designated containers. Exterior on-site waste containers must be closable and lockable.
- .5 Handle and dispose of hazardous materials in accordance with the CEPA, TDGA, Regional and Municipal regulations.
- .6 Fold up metal banding, flatten and place in designated area for recycling.
- .7 Disposal of asbestos waste generated by removal activities must comply with Federal, Provincial, Territorial and Municipal regulations. Dispose of asbestos waste in sealed double thickness 6 ml bags or leak proof drums. Label containers with appropriate warning labels.
- .8 Provide manifests describing and listing waste created. Transport containers by approved means to licensed landfill for burial. All waste landfill manifests are to be provided to the NRC Departmental Representative at the end of the project.

## **1.8 EXISTING CONDITIONS**

- .1 Refer to the following document that is bound to this Specification and forms part of the tender documents package, for details on materials containing asbestos to be handled, removed, or otherwise disturbed and disposed of during this Project:
  - .1 Project-Specific Designated Substances and Hazardous Materials Survey, Buildings M-2 and M-59-Washrooms Renovation Project. Prepared by DST Consulting Engineers, Inc. Dated June 2016.
- .2 Domestic hot and cold water piping concealed within wall cavities within Rooms 104, 115, 128 and 129 at the M-59 Building, and Rooms 124, and 271 at the M-2 Building is insulated with asbestos-containing insulation.
- .3 Verification of visible quantities of asbestos-containing materials and site conditions are the responsibility of the bidding contractor. Contractors are to verify all site conditions themselves and base their abatement bids upon their own observations and quantity take-offs. Bidding contractors are to draw their own conclusions with respect to site conditions and/or factors that may affect their work.
- .4 Notify NRC Departmental Representative of any suspect asbestos-containing material discovered during Work and not apparent from drawings, specifications, or report pertaining to Work. Do not disturb such material until instructed by NRC Departmental Representative.
- .5 A total of 5 square metres of friable grey cement compound on ductwork within Room 104 at the M-59 Building is present.

## **1.9 SCHEDULING**

- .1 Not later than ten (10) days before beginning Work on this Project notify following in writing:
  - .1 Provincial/Territorial, Department of Labour.
  - .2 Disposal Authority.
- .2 Inform sub-trades of presence of asbestos-containing materials identified in the documents listed in Item 1.8.
- .3 Submit to NRC Departmental Representative copy of notifications prior to start of Work.
- .4 Hours of Work: perform work involving asbestos abatement located at the Building during hours specified by NRC Departmental Representative. The work schedule must be in accordance with the specific phasing for this abatement project, as indicated on the drawings referenced in Section 1.8.4, and be approved in writing by the NRC Departmental Representative in advance of work. Contractor shall be available to work continuously from beginning to end of project.
- .5 Any waste loading shall only be performed after regular business hours (18:00), ensuring this does not contradict with working hours. Waste loading shall not occur through occupied areas of the building. Waste storage containers to be closed and locked overnight.

## **1.10 PERSONNEL TRAINING**

- .1 Before beginning Work, provide to NRC Departmental Representative satisfactory proof that every worker has had instruction and training in hazards of asbestos exposure, in personal hygiene including dress and showers, in entry and exit from Asbestos Work Area, in aspects of work procedures, and in use, cleaning, and disposal of respirators and protective clothing.
- .2 Instruction and training related to respirators includes, at minimum:
  - .1 Proper fitting of equipment.
  - .2 Inspection and maintenance of equipment.
  - .3 Cleaning and Disinfecting of equipment.
  - .4 Limitations of equipment.
- .3 Instruction and training must be provided by competent, qualified person.
- .4 Every worker involved in a Type 3 operation must have successfully completed the Asbestos Abatement Worker Training Program approved by the Ministry of Training, Colleges and Universities.
- .5 Every supervisor of a worker involved in a Type 3 operation must have successfully completed the Asbestos Abatement Supervisor Training Program approved by the Ministry of Training, Colleges and Universities.

## **Part 2 Products**

### **2.1 MATERIALS**

- .1 Polyethylene: minimum 0.15 mm thick unless otherwise specified; in sheet size to minimize joints.
- .2 FR polyethylene: minimum 0.15 mm thick, woven fibre reinforced fabric bonded both sides with polyethylene.
- .3 Tape: fibreglass - reinforced duct tape suitable for sealing polyethylene under both dry conditions and wet conditions using amended water.
- .4 Wetting agent: 50% polyoxyethylene ester and 50% polyoxyethylene ether, or other material approved by NRC Departmental Representative mixed with water in concentration to provide adequate penetration and wetting of asbestos-containing material.
- .5 Asbestos waste containers: Metal or fibre - type acceptable to dump operator with tightly fitting covers and 0.15 mm minimum thickness sealable polyethylene liners.
  - .1 Inner container: 0.15 mm thick sealable polyethylene waste bag.
  - .2 Outer container: sealable metal or fibre type where there are sharp objects included in waste material; otherwise outer container may be sealable metal or fibre type or second 0.15 mm thick sealable polyethylene bag.
  - .3 Label containers in accordance with applicable Regulations. Label in both official languages.
- .6 Tape: tape suitable for sealing polyethylene to surfaces under both dry and wet conditions using amended water.

- .7 Scaffolding: Of appropriate size and strength to accommodate project in accordance with O.Reg 213/91, with specifications and set-up to be approved and stamped by professional engineer. Include in contract sum costs due to this requirement.
- .8 Slow - drying sealer: non-staining, clear, water - dispersible type that remains tacky on surface for at least 8 hours and designed for purpose of trapping residual asbestos fibres.
- .9 Sealer: flame spread and smoke developed rating less than 50 and be compatible with new fireproofing.
- .10 Encapsulant: penetrating type conforming to CAN/CGSB-1.205.

### **Part 3 Execution**

#### **3.1 PREPARATION**

- .1 Work Areas:
  - .1 Shut off and isolate air handling and ventilation systems for work areas to prevent fibre dispersal to other building areas during work phase. Location and procedure of shut off shall be approved by the NRC Departmental Representative. Conduct smoke tests to ensure that duct work isolation measures are airtight. Location and procedure for smoke tests shall be approved by the NRC Departmental Representative. Due to the presence of asbestos-containing spray-applied insulation within the work area, physical disturbance of any ductwork shall be performed under Type 3 asbestos precautionary measures.
  - .2 Utilities within the project area, including thermostats, heat detectors, smoke detectors and other wall or ceiling mounted utility devices shall remain functioning throughout the duration of the project, and shall be protected from debris during demolition. Where walls or ceilings are to be removed that utility devices are attached to, the utility devices can be detached and supported in such a way they can remain functioning and supported throughout the duration of the project, and be available for future use.
  - .3 Pre-clean moveable furniture and carpeting within proposed work area using HEPA vacuum and remove from work area to an appropriate temporary location.
  - .4 Pre-clean fixed casework, plant, and equipment within proposed work area(s), using HEPA vacuum and cover with polyethylene sheeting sealed with tape.
  - .5 Clean proposed work area(s) using, where practicable, HEPA vacuum cleaning equipment. If not practicable, use wet cleaning method. Do not use methods that raise dust, such as dry sweeping, or vacuuming using other than HEPA vacuum equipment.
  - .6 The spread of dust from the work area to be prevented by:
    - .1 Using enclosures of polyethylene or other suitable material that is impervious to asbestos (including, if the enclosure material is opaque, one or more transparent window areas to allow observation of the entire work area from outside the enclosure), if the work area is not enclosed by walls.

- .2 Using curtains of polyethylene sheeting or other suitable material that is impervious to asbestos, fitted on each side of each entrance or exit from the work area.
- .7 DOP test negative pressure units within one (1) month prior to work operations. Provide documentation to Client Representative. Put negative pressure system in operation and operate continuously from time first polyethylene is installed to seal openings until final completion of work including final cleanup. Provide continuous monitoring of pressure difference using automatic recording instrument. The system to maintain a negative air pressure of 0.02 inches [5 Pa] of water, relative to the area outside the enclosed area. The system to be inspected and maintained by a competent person prior each use to ensure that there is no air leakage, and if the filter is found to be damaged or defective, it to be replaced before the ventilation system is used. Vent negative air units to the outdoors.
- .8 Seal off openings such as corridors, doorways, windows, skylights, ducts, grilles, and diffusers, with polyethylene sheeting sealed with tape.
- .9 Cover floor and wall surfaces with polyethylene sheeting sealed with tape. Use one layer of FR polyethylene on floors. Cover floors first so that polyethylene extends at least 300 mm up walls then cover walls to overlap floor sheeting.
- .10 Build airlocks at entrances to and exits from work area(s) so that work area(s) are always closed off by one curtained doorway when workers enter or exit.
- .11 At each access to work areas install warning signs in both official languages in upper case "Helvetica Medium" letters reading as follows where number in parentheses indicates font size to be used: "CAUTION ASBESTOS HAZARD AREA (25 mm) NO UNAUTHORIZED ENTRY (19 mm) WEAR ASSIGNED PROTECTIVE EQUIPMENT (19 mm) BREATHING ASBESTOS DUST MAY CAUSE SERIOUS BODILY HARM (7 mm)".
- .12 After work area isolation, remove heating, ventilating, and air conditioning filters, pack in sealed plastic bags 0.15 mm minimum thick and treat as contaminated asbestos waste. Remove ceiling - mounted objects such as lights, partitions, other fixtures not previously sealed off, and other objects that interfere with asbestos removal, as directed by NRC Departmental Representative. Use localized water spraying during fixture removal to reduce fibre dispersal.
- .13 Maintain emergency and fire exits from work area(s), or establish alternative exits satisfactory to Fire Commissioner of Canada.
- .14 Where application of water is required for wetting asbestos-containing materials, shut off electrical power, provide 24 volt safety lighting and ground fault interrupter circuits on power source for electrical tools, in accordance with applicable CSA Standard. Ensure safe installation of electrical lines and equipment.
- .2 Worker Decontamination Enclosure System:
  - .1 Worker Decontamination Enclosure System includes Equipment and Access Room, Shower Room, and Clean Room, as follows:

- .1 Equipment and Access Room: build Equipment and Access Room between Shower Room and work area(s), with two curtained doorways, one to Shower Room and one to work area(s). Install portable toilet, waste receptor, and storage facilities for workers' shoes and protective clothing to be reworn in work area(s). Build Equipment and Access Room large enough to accommodate specified facilities, other equipment needed, and at least one worker allowing him /her sufficient space to undress comfortably.
  - .2 Shower Room: build Shower Room between Clean Room and Equipment and Access Room, with two curtained doorways, one to Clean Room and one to Equipment and Access Room. Provide one shower for every five workers. Provide hot and cold water or water of a constant temperature that is not less than 40°C or more than 50°C. Provide individual controls inside the room to regulate water flow, and individual controls inside room to regulate temperature. Provide piping and connect to water sources and drains. Pump waste water through 5 micrometre filter system acceptable to Client Representative before directing into drains. Provide soap, clean towels, and appropriate containers for disposal of used respirator filters.
  - .3 Clean Room: build Clean Room between Shower Room and clean areas outside of enclosures, with two curtained doorways, one to outside of enclosures and one to Shower Room. Provide lockers or hangers and hooks for workers' street clothes and personal belongings. Provide storage for clean protective clothing and respiratory equipment. Install mirror to permit workers to fit respiratory equipment properly.
- .3 Container and Equipment Decontamination Enclosure System:
- .1 Container and Equipment Decontamination Enclosure System consists of Staging Area within work area, Washroom, Holding Room, and Unloading Room. Purpose of system is to provide means to decontaminate waste containers, scaffolding, waste and material containers, vacuum and spray equipment, and other tools and equipment for which Worker Decontamination Enclosure System is not suitable.
    - .1 Staging Area: designate Staging Area in work area for gross removal of dust and debris from waste containers and equipment, labelling and sealing of waste containers, and temporary storage pending removal to Washroom. Equip Staging Area with curtained doorway to Washroom.
    - .2 Washroom: build Washroom between Staging Area and Holding Room with two curtained doorways, one to Staging Area and one to Holding Room. Provide high - pressure low - volume sprays for washing of waste containers and equipment. Pump waste water through 5 micrometre filter system before directing into drains. Provide piping and connect to water sources and drains.
    - .3 Holding Room: build Holding Room between Washroom and Unloading Room, with two curtained doorways, one to Washroom and one to Unloading Room. Build Holding

- Room sized to accommodate at least two waste containers and largest item of equipment used.
- .4 Unloading Room: build Unloading Room between Holding Room and outside, with two curtained doorways, one to Holding Room and one to outside.
- .4 Construction of Decontamination Enclosures:
  - .1 Build suitable framing for enclosures or use existing rooms where convenient, and line with polyethylene sheeting sealed with tape. Use one layer of FR polyethylene on floors, as applicable.
  - .2 Build curtained doorways between enclosures so that when people move through or when waste containers and equipment are moved through doorway, one of two closures comprising doorway always remains closed.
- .5 Separation of Work Areas from Occupied Areas:
  - .1 Separate parts of building required to remain in use from parts of building or exterior used for asbestos abatement by means of airtight barrier system constructed as follows:
    - .1 Build suitable floor to ceiling lumber or metal stud framing, cover with polyethylene sheeting sealed with tape, and apply 9 mm minimum thick plywood. Seal joints between plywood sheets and between plywood and adjacent materials with surface film forming type sealer, to create airtight barrier.
    - .2 Cover plywood barrier with polyethylene sealed with tape, as specified for work areas.
- .6 Maintenance of Enclosures:
  - .1 Maintain enclosures in tidy condition.
  - .2 Ensure that barriers and polyethylene linings are effectively sealed and taped. Repair damaged barriers and remedy defects immediately upon discovery.
  - .3 Visually inspect enclosures at beginning of each working period.
  - .4 Use smoke methods to test effectiveness of barriers when directed by NRC Departmental Representative.
- .7 Do not begin Asbestos Abatement work until:
  - .1 Arrangements have been made for disposal of waste.
  - .2 For wet stripping techniques, arrangements have been made for containing, filtering, and disposal of waste water.
  - .3 Work area(s) and decontamination enclosures and parts of building required to remain in use are effectively segregated.
  - .4 Tools, equipment, and materials waste containers are on hand.
  - .5 Arrangements have been made for building security.
  - .6 Warning signs are displayed where access to contaminated areas is possible.
  - .7 Notifications have been completed and other preparatory steps have been taken.
  - .8 Work area enclosure has been inspected and approved by the NRC Departmental Representative.

- .9 Locations for waste bins as designated by the NRC Departmental Representative have been established. Keep bins covered and enclosed while at the site. Bin loading area shall be kept clean at all times.

### **3.2 SUPERVISION**

- .1 Minimum of one Supervisor for every ten workers is required.
- .2 Approved Supervisor must remain within Asbestos Work Area during disturbance, removal, or other handling of asbestos-containing materials.

### **3.3 ASBESTOS REMOVAL**

- .1 Before removing asbestos:
  - .1 Prepare site.
  - .2 Spray asbestos-containing material with water containing specified wetting agent, using airless spray equipment capable of providing "mist" application to prevent release of fibres. Saturate asbestos material sufficiently to wet it to substrate without causing excess dripping. Spray asbestos material repeatedly during work process to maintain saturation and to minimize asbestos fibre dispersion.
- .2 Remove saturated asbestos material in small sections. Do not allow saturated asbestos to dry out. As it is being removed pack material in sealable plastic bags 0.15 mm minimum thick and place in labelled containers for transport.
- .3 Seal filled containers. Clean external surfaces thoroughly by wet sponging. Remove from immediate working area to Staging Area. Clean external surfaces thoroughly again by wet sponging before moving containers to decontamination Washroom. Wash containers thoroughly in decontamination Washroom, and store in Holding Room pending removal to Unloading Room and outside. Ensure that containers are removed from Holding Room by workers who have entered from uncontaminated areas dressed in clean coveralls.
- .4 After completion of stripping work, wire brushed and wet-sponge surfaces from which asbestos has been removed to remove visible material. During this work keep surfaces wet.
- .5 Where NRC Departmental Representative decides complete removal of asbestos containing material is impossible due to obstructions such as structural members or major service elements, or because asbestos containing material was originally applied to asphaltic coating, and provides written direction, encapsulate material as follows:
  - .1 Apply surface film forming type sealer to provide 0.635 mm minimum dry film thickness over asbestos surfaces. Apply using airless spray equipment to avoid blowing off fibres. Apply penetrating type sealer to penetrate existing sprayed asbestos surfaces to uniform depth of 25 mm minimum. Apply penetrating type sealer to penetrate existing asbestos surfaces uniformly to substrate.
- .6 After wire brushing and wet sponging to remove visible asbestos and after encapsulating asbestos containing material impossible to remove, wet clean entire work area including Equipment and Access Room, and equipment used in

process. After 24 hour period to allow for dust settling, wet clean these areas and objects again. During this settling period no entry, activity, or ventilation will be permitted. After second 24 hour period under same conditions, clean these areas and objects again using HEPA vacuum followed by wet cleaning. After inspection by NRC Departmental Representative or designate, apply continuous coat of slow drying sealer to surfaces of work area. Allow at least 16 hours with no entry, activity, ventilation, or disturbance other than operation of negative pressure units during this period.

- .7 Work is subject to visual inspection and air monitoring by NRC Departmental Representative. Contamination of surrounding areas indicated by visual inspection or air monitoring will require complete enclosure and clean-up of affected areas.
- .8 Cleanup:
  - .1 Frequently during Work and immediately after completion of work, clean up dust and asbestos containing waste using HEPA vacuum or by damp mopping.
  - .2 Place dust and asbestos containing waste in sealed dust tight waste bags. Treat drop sheets and disposable protective clothing as asbestos waste and wet and fold to contain dust and then place in waste bags.
  - .3 Immediately before their removal from Asbestos Work Area and disposal, clean each filled waste bag using damp cloths or HEPA vacuum and place in second clean waste bag.
  - .4 Seal and remove double bagged waste from site. Dispose of in accordance with requirements of Provincial/Territorial and Federal authority having jurisdiction. Supervise dumping and ensure that dump operator is fully aware of hazardous nature of material to be dumped and that guidelines and regulations for asbestos disposal are followed.
  - .5 Perform final thorough clean-up of Asbestos Work Areas and adjacent areas affected by Work using HEPA vacuum.

### **3.4 INSPECTION**

- .1 Perform inspection of Asbestos Work Area to confirm compliance with specification and governing authority requirements. Deviation(s) from these requirements that have not been approved in writing by the NRC Departmental Representative may result in Work stoppage, at no cost to the Owner.
- .2 NRC Departmental Representative will inspect Work for:
  - .1 Adherence to specific procedures and materials.
  - .2 Final cleanliness and completion.
  - .3 No additional costs will be allowed by Contractor for additional labour or materials required to provide specified performance level.
- .3 When asbestos leakage from Asbestos Work Area has occurred or is likely to occur, NRC Departmental Representative may order Work shutdown.
- .4 No additional costs will be allowed by Contractor for additional labour or materials required to provide specified performance level.

### **3.5 AIR MONITORING**

- .1 From beginning of Work until completion of cleaning operations, NRC Departmental Representative will collect air samples on daily basis outside of work area enclosure(s) in accordance with industry standard practice.
  - .1 Contractor shall be responsible for monitoring inside in accordance with applicable Provincial/Territorial Occupational Health and Safety Regulations.
  - .2 Contractor shall ensure that respiratory safety factors for Workers are not exceeded.
- .2 If air monitoring shows that areas outside work area are contaminated, enclose, maintain and clean these areas in same manner as that applicable to Asbestos Work Areas.
  - .1 Stop work and clean areas outside of Asbestos Work Areas when Phase Contrast Microscopy measurements exceed 0.05 fibres per cubic centimetre (f/cc) and correct procedures.
  - .2 All required cleaning, re-cleaning, additional air testing and/or inspections will be at no extra charge to NRC Departmental Representative.
- .3 Final air monitoring to be conducted as follows: After Asbestos Work Area has passed visual inspection by NRC Departmental Representative, and acceptable coat of lock-down agent has been applied to surfaces within enclosure, and appropriate setting period has passed, NRC Departmental Representative will perform aggressive air monitoring within Asbestos Work Area.
  - .1 Final air monitoring results must show fibre levels of less than 0.01 f/cc.
  - .2 If air monitoring results show fibre levels in excess of 0.01 f/cc, re-clean work area and apply another acceptable coat of lock-down agent to surfaces.
  - .3 Repeat as necessary until fibre levels are less than 0.01 f/cc.
  - .4 No additional costs will be allowed by Contractor for additional labour or materials required to provide specified performance level.

### **3.6 FINAL CLEANUP**

- .1 Following cleaning and air sampling by NRC Departmental Representative shows that asbestos levels inside work area enclosure(s) do not exceed 0.01 fibres/cc, proceed with final cleanup.
- .2 Remove polyethylene sheet by rolling it away from walls to centre of work area. Vacuum visible asbestos-containing particles observed during cleanup, immediately, using HEPA vacuum equipment.
- .3 Place polyethylene seals, tape, cleaning material, clothing, and other contaminated waste in plastic bags and sealed labelled waste containers for transport.
- .4 Include in clean-up Work areas, Equipment and Access Room, Washroom, Shower Room, and other contaminated enclosures.
- .5 Include in clean-up sealed waste containers and equipment used in Work and remove from work areas, via Container and Equipment Decontamination Enclosure System, at appropriate time in cleaning sequence.

- .6 Conduct final check to ensure that no dust or debris remains on surfaces as result of dismantling operations.
- .7 As work progresses, and to prevent exceeding available storage capacity on site, remove sealed and labelled containers containing asbestos waste and dispose of at authorized disposal area in accordance with requirements of disposal authority. Ensure that each shipment of containers transported to dump is accompanied by Contractor's representative to ensure that dumping is done in accordance with governing regulations.

**END OF SECTION**

## PART 1 - GENERAL

### 1.1 REFERENCES

- .1 Canadian Standards Association (CSA International)
  - .1 CAN3 A165 SERIES-94 (R2000), CSA Standards on Concrete Masonry Units.
  - .2 CSA A179-04(R2014), Mortar and Grout for Unit Masonry.
  - .3 CSA-A370-94(C1999), Connectors for Masonry.
  - .4 CSA-A371-04(R2014), Masonry Construction for Buildings.
  - .5 CSA G30.14-M1983(R1998), Deformed Steel Wire For Concrete Reinforcement.
  - .6 CAN/CSA G30.18-09(R2014), Billet-Steel Bars for Concrete Reinforcement.
  - .7 CSA-S304.1-94(R2001), Masonry Design for Buildings.

### 1.2 SUBMITTALS

- .1 Product Data:
  - .1 Submit manufacturer's printed product literature, specifications and data sheet in accordance with Section 00 10 00.
- .2 Shop Drawings :
  - .1 Submit shop drawings in accordance with Section 00 10 00.
  - .2 Shop drawings consist of bar bending details, lists and placing drawings.
  - .3 On placing drawings, indicate sizes, spacing, location and quantities of reinforcement and connectors.

### 1.3 STORAGE AND HANDLING

- .1 Protect on site stored or installed material from moisture damage in accordance with manufacturer's printed instructions.

## PART 2 - PRODUCTS

### 2.1 MASONRY UNITS

- .1 Standard concrete block units: to CAN3-A165 Series (CAN3-A165.1).
  - .1 Classification: H / 15 / A / M.
  - .2 Size: modular.

### 2.2 REINFORCEMENT AND CONNECTORS

- .1 Bar reinforcement: to CSA-A371 and CAN/CSA G30.18, Grade 400.
- .2 Wire reinforcement: to CSA-A371 and CSA G30.14, truss type.
- .3 Connectors shall be corrosion resistant: to CSA-A370 and CSA-S304.

**2.3 MORTAR AND GROUT**

- .1 Mortar: to CSA A179.
  - .1 Use aggregate passing 1.18 mm sieve where 6 mm thick joints are indicated.
  - .2 Colour: ground coloured natural aggregates or metallic oxide pigments.
- .2 Mortar Type: S based on specifications,
- .3 Following applies regardless of mortar types and uses specified above:
  - .1 Mortar for grouted reinforced masonry: type S based on specifications.

**2.4 ACCESSORIES**

- .1 Nailing Inserts: 0.5 mm minimum thickness, galvanized.
- .2 Bolts: 12 mm diameter x 150 mm long with ends bent 50 mm at 90 degrees.

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- .1 Do masonry work in accordance with CSA-A371 except where specified otherwise.
  - .1 Bond: running stretcher bond with vertical joints in perpendicular alignment and centred on adjacent stretchers above and below.
  - .2 Coursing height: 200 mm for one block and one joint.
  - .3 Jointing: tool where exposed or where paint or other finish coating is specified to provide smooth compressed concave surface.
- .2 Build masonry plumb, level, and true to line, with vertical joints in alignment.
- .3 Layout coursing and bond to achieve correct coursing heights, and continuity of bond above and below openings, with minimum of cutting.

**3.2 CONSTRUCTION**

- .1 Exposed masonry:
  - .1 Remove chipped, cracked, and otherwise damaged units, in exposed masonry and replace with undamaged units.
  - .2 Cut out for electrical switches, outlet boxes, and other recessed or built-in objects. Make cuts straight, clean, and free from uneven edges.

- .2 Building-In:
  - .1 Install masonry connectors and reinforcement where indicated on drawings.
  - .2 Build in items required to be built into masonry.
  - .3 Prevent displacement of built-in items during construction. Check plumb, location and alignment frequently, as work progresses.
- .3 Interface with other work:
  - .1 Cut openings in existing work as indicated.
  - .2 Openings in walls: approved Departmental Representative.
  - .3 Make good existing work. Use materials to match existing.
  
- 3.3 REINFORCING AND CONNECTING** .1 Install masonry connectors and reinforcement in accordance with CSA-A370, CSA-A371 and CSA-S304.1 unless indicated otherwise.
  
- 3.4 TYING** .1 Tie new masonry to existing in accordance with NBC, CSA-S304.1, CSA-A371.
  
- 3.5 GROUTING** .1 Grout masonry in accordance with CSA-S304.1, CSA-A371 and CSA-A179 and as indicated.
  
- 3.6 ANCHORS** .1 Supply and install metal anchors as indicated.
  
- 3.7 SITE TOLERANCES** .1 Tolerances in notes to Clause 5.3 of CSA-A371 apply.
  
- 3.8 CLEANING**
  - .1 Perform cleaning after installation to remove construction and accumulated environmental dirt.
  - .2 Upon completion of installation, remove surplus materials, rubbish, tools and equipment barriers.
  
- 3.9 PROTECTION** .1 Protect masonry and other work from marking and other damage. Protect completed work from mortar droppings. Use non-staining coverings.

  - .6 CSA W59.2-M1991 (R2009), Welded Aluminum Construction.
- .4 Aluminum Association Designation System for Aluminum Finishes-(AA) – 2003 (R2009).

**1.3 SUBMITTALS**

- .1 Product Data:
  - .1 Submit manufacturer's printed product literature, specifications and data sheet in accordance with Section 00 10 00.
- .2 Shop Drawings
  - .1 Submit shop drawings in accordance with Section 00 10 00.
  - .2 Indicate materials, core thicknesses, finishes, connections, joints, method of anchorage, number of anchors, supports, reinforcement, details, and accessories.

- .3 Shop Drawings submitted shall bear the stamp and signature of a qualified Professional Engineer registered and licensed to practice in the Province of Ontario.

**1.4 QUALITY ASSURANCE**

- .1 Test Reports: Certified test reports showing compliance with specified performance characteristics and physical properties.
- .2 Certificates: Product certificates signed by manufacturer certifying materials comply with specified performance characteristics and criteria and physical requirements.

**1.5 DELIVERY, STORAGE, AND HANDLING**

- .1 Packing, Shipping, Handling and Unloading:
- .2 Deliver, store, handle and protect materials in accordance with Section 00 10 00.
- .3 Storage and Protection:
  - .1 Cover exposed stainless steel surfaces with pressure sensitive heavy protection paper or apply strippable plastic coating, before shipping to job site.
  - .2 Leave protective covering in place until final cleaning of building. Provide instructions for removal of protective covering.

**1.6 WASTE MANAGEMENT AND DISPOSAL**

- .1 Remove from site and dispose of packaging materials at appropriate recycling facilities.

**PART 2 - PRODUCTS**

**2.1 MATERIALS**

- .1 Steel sections and plates: to CAN/CSA-G40.20/G40.21, Grade 300W.
- .2 Steel pipe: to ASTM A 53/A53M.
- .3 Welding materials: to CSA W59-13.
- .4 Welding electrodes: to CSA W48 Series.
- .5 Bolts and anchor bolts: to ASTM A 307.
- .6 Grout: non-shrink, non-metallic, flowable, 15 MPa at 24 hours.
- .7 Aluminum extrusions: Aluminum Association Alloy AA6063-T6.
- .8 Sheet aluminum: Aluminum Association Alloy AA1100.
- .9 Fasteners: stainless steel.

**2.2 FABRICATION**

- .1 Fabricate work square, true, straight and accurate to required size, with joints closely fitted and properly secured.
- .2 Use self-tapping shake-proof flat headed screws on items requiring assembly by screws or as indicated.
- .3 Where possible, fit and shop assemble work, ready for erection.
- .4 Ensure exposed welds are continuous for length of each joint. File or grind exposed welds smooth and flush.

**2.3 PIPE RAILINGS**

- .1 Fabricate to shapes and sizes indicated.

**2.4 FINISHES**

- .1 Shop coat primer: to CAN/CGSB-1.40.

**2.5 SHOP PAINTING**

- .1 Apply one shop coat of primer to metal items, with exception of galvanized or concrete encased items.
- .2 Use primer unadulterated, as prepared by manufacturer. Paint on dry surfaces, free from rust, scale, grease. Do not paint when temperature is lower than 7 degrees C.
- .3 Clean surfaces to be field welded; do not paint.

**PART 3 - EXECUTION**

**3.1 ERECTION**

- .1 Do welding work in accordance with CSA W59 unless specified otherwise.
- .2 Erect metalwork square, plumb, straight, and true, accurately fitted, with tight joints and intersections.
- .3 Provide suitable means of anchorage acceptable to Consultant such as dowels, anchor clips, bar anchors, expansion bolts and shields, and toggles.
- .4 Exposed fastening devices to match finish and be compatible with material through which they pass.
- .5 Provide components for building by other sections in accordance with shop drawings and schedule.
- .6 Make field connections with bolts to CAN/CSA-S16.1, or weld.

- .7 Hand items over for casting into concrete or building into masonry to appropriate trades together with setting templates.
- .8 Touch-up rivets, field welds, bolts and burnt or scratched surfaces after completion of erection with primer.
- .9 Touch-up galvanized surfaces with zinc rich primer where burned by field welding.

### 3.2 PIPE RAILINGS

- .1 Fabricate of steel, steel plate formed to shape and sizes indicated.
- .2 Prime paint after fabrication.
- .3 Set railing standards in concrete. Grout to fill hole. Trowel surface smooth and flush with adjacent surfaces.

### 3.3 CLEANING

- .1 Perform cleaning after installation to remove construction and accumulated environmental dirt.
- .2 Upon completion of installation, remove surplus materials, rubbish, tools and equipment barriers.

**END OF SECTION**

**PART 1 - GENERAL**

**1.1 RELATED SECTIONS**

- .1 Section 09 22 16 – Non-Structural Metal Framing.
- .2 Section 10 28 10 – Toilet and Bath Accessories.

**1.2 REFERENCES**

- .1 Canadian Standards Association (CSA International)
  - .1 CSA B111-1974 (R1998), Wire Nails, Spikes and Staples.
  - .2 CAN/CSA-G164-M92 (R1998), Hot Dip Galvanizing of Irregularly Shaped Articles.
  - .3 CSA O121-M1978 (R1998), Douglas Fir Plywood.
  - .4 CAN/CSA-O141-91 (R1999), Softwood Lumber.
  - .5 CSA O151-M1978 (R1998), Canadian Softwood Plywood.
  - .6 CAN/CSA-O325.0-92 (R1998), Construction Sheathing.
- .2 National Lumber Grades Authority (NLGA)
  - .1 Standard Grading Rules for Canadian Lumber, 2014.

**1.3 QUALITY ASSURANCE**

- .1 Lumber identification: by grade stamp of an agency certified by Canadian Lumber Standards Accreditation Board.
- .2 Plywood identification: by grade mark in accordance with applicable CSA standards.
- .3 Plywood, OSB and wood based composite panel construction sheathing identification: by grademark in accordance with applicable CSA standards.

**1.4 WASTE MANAGEMENT AND DISPOSAL**

- .1 Do not dispose of preservative treated wood through incineration.
- .2 Do not dispose of preservative treated wood with materials destined for recycling or reuse.
- .3 Dispose of treated wood, end pieces, wood scraps and sawdust at sanitary landfill.
- .4 Dispose of unused wood preservative material at official hazardous material collections site.
- .5 Do not dispose of unused preservative material into sewer system, into streams, lakes, onto ground or in other locations where they will pose health or environmental hazard.

**PART 2 - PRODUCTS**

- 2.1 LUMBER MATERIAL**
- .1 Lumber: unless specified otherwise, softwood, S4S, moisture content 19% or less in accordance with following standards:
    - .1 CAN/CSA-O141.
    - .2 NLGA Standard Grading Rules for Canadian Lumber.
  - .2 Furring, blocking, nailing strips, grounds, rough bucks:
    - .1 Board sizes: "Standard" or better grade.
    - .2 Dimension sizes: "Standard" light framing or better grade.
    - .3 Post and timbers sizes: "Standard" or better grade.
- 2.2 PANEL MATERIALS**
- .1 Douglas fir plywood (DFP): to CSA O121, exterior quality with pressure treated preservative.
- 2.3 ACCESSORIES**
- .1 Nails, spikes and staples: to CSA B111.
  - .2 Nails, spikes and staples:
    - .1 Use common spiral nails and spiral spikes except where indicated otherwise.
    - .2 Use hot galvanized finish steel for exterior work, interior high humidity areas and for pressure treated lumber except where indicated otherwise.
    - .3 Bolt, nut, washer, screw and pin type fasteners: with hot-dip galvanized finish to CSA G164-M92 for exterior work, interior high humidity areas and for pressure treated lumber.
    - .4 Use surface fastenings of following types, except where specific type is indicated.
      - .1 To hollow masonry, plaster and panel surfaces use toggle bolt.
      - .2 To solid masonry and concrete use expansion shield with lag screw.
      - .3 To structural steel use bolts through drilled hole, or welded stud-bolts or power driven self-drilling screws.
    - .5 Submit alternate fasteners for Departmental Representative's approval.
- 2.4 FINISHES**
- .1 Galvanizing: to CAN/CSA-G164, use galvanized fasteners for exterior work, pressure- preservative, fire-retardant treated lumber.
- 2.5 WOOD PRESERVATIVE**
- .1 Surface-applied wood preservative: clear or copper naphthenate or 5% pentachlorophenol solution, water repellent preservative.
  - .2 Pentachlorophenol use is restricted to building components that are in ground contact and subject to decay or insect attack only. Where

used, pentachlorophenol-treated wood must be covered with two coats of an appropriate sealer.

- .3 Structures built with wood treated with pentachlorophenol and inorganic arsenicals must not be used for storing food nor should the wood come in contact with drinking water.

## **PART 3 - EXECUTION**

### **3.1 PREPARATION**

- .1 Treat surfaces of material with wood preservative, before installation.
- .2 Apply preservative by dipping, or by brush to completely saturate and maintain wet film on surface for minimum 3 minute soak on lumber and one minute soak on plywood.
- .3 Re-treat surfaces exposed by cutting, trimming or boring with liberal brush application of preservative before installation.
- .4 Treat material as follows:
  - .1 Wood furring for exterior applications.

### **3.2 INSTALLATION**

- .1 Comply with requirements of NBC, supplemented by the following paragraphs.
- .2 Install furring and blocking as required to space-out and support surface applied materials or other work as indicated.
- .3 Align and plumb faces of furring and blocking to tolerance of 1:600.
- .4 Install rough bucks, nailers and linings to rough openings as required to provide backing for frames and other work.
- .5 Install wood cants, nailers, curbs and other wood supports as required and secure using steel fasteners.

### **3.3 NAILERS**

- .1 Install wood nailers as indicated.
- .2 Except where indicated otherwise, use material at least 40 mm (1 ½") thick secured with 10 mm (3/8") bolts located within 300 mm (12") from ends of members and uniformly spaced at 1200 mm (4'-0") between.
- .3 Countersink bolts where necessary to provide clearance for other work.

**3.4 ERECTION**

- .1 Frame, anchor, fasten, tie and brace members to provide necessary strength and rigidity.

**END OF SECTION**

**PART 1 - GENERAL**

**1.1 RELATED SECTIONS**

- .1 Section 09 22 16 – Non-Structural Metal Framing.

**1.2 REFERENCES**

- .1 American Society for Testing and Materials International (ASTM)

  - .1 CAN/ULC-S604-M1991, Type A Chimneys.
  - .2 CAN/ULC-S702-09, Standard for Mineral Fibre Insulation.

**1.3 SUBMITTALS**

- .1 Product Data:
  - .1 Submit manufacturer's printed product literature, specifications and data sheet in accordance with Section 00 01 00 - Submittal Procedures.
- .2 Manufacturer's Instructions:
  - .1 Submit manufacturer's installation instructions.

**1.4 QUALITY ASSURANCE**

- .1 Test Reports: certified test reports showing compliance with specified performance characteristics and physical properties.
- .2 Certificates: product certificates signed by manufacturer certifying materials comply with specified performance characteristics and criteria and physical requirements.

**PART 2 - PRODUCTS**

- 2.2 INSULATION** .1 Sound attenuation batt insulation: to CAN/ULC S702 – latest edition, Type 1 (without membrane). Thickness to match depth of wall cavity.
- .1 Acceptable Materials:
    - .1 “Safe ‘N’ Sound” batt insulation and/or “Acoustical Fire Batts – AFB” as manufactured by Roxul Inc.
    - .2 “Quiet Zone” noise stop blanket – 700 Series as manufactured by Owens Corning Canada Inc.
    - .3 Eco Touch Pink Quite Zone Pink Fiberglas Acoustic Insulation.
    - .4 “Noise Reducer” Sound Attenuation Batt by Certain Teed Insulation.

**PART 3 - EXECUTION**

- 3.1 MANUFACTURER'S INSTRUCTIONS** .1 Compliance: comply with manufacturer's written data, including product technical bulletins, product catalogue installation instructions, product carton installation instructions, and data sheets.
- 3.2 INSULATION INSTALLATION**
- .1 Install insulation to maintain continuity of insulation to building elements and spaces and to ASTM C 1320.
  - .2 Fit insulation closely around electrical boxes, pipes, ducts, frames and other objects in or passing through insulation.
  - .3 Do not compress insulation to fit into spaces.
  - .4 Keep insulation minimum 75 mm from heat emitting devices such as recessed light fixtures, and minimum.
  - .6 Do not enclose insulation until it has been inspected and approved by Departmental Representative.
- 3.3 CLEANING** .1 Upon completion of installation, remove surplus materials, rubbish, tools and equipment barriers.

**END OF SECTION**

**PART 1 - GENERAL**

- 1.1 RELATED WORK** .1 Fire stopping and smoke seals within mechanical assemblies (i.e. inside ducts, dampers) and electrical assemblies (i.e. inside cable trays) are specified in Divisions 21, 22, 23, 25, 26 and 28 respectively.
- 1.2 REFERENCES** .1 Underwriter's Laboratories of Canada (ULC)  
.1 ULC-S115-Latest Edition, Fire Tests of Firestop Systems.
- 1.3 DEFINITIONS** .1 Fire Stop Material: device intended to close off opening or penetration during fire or materials that fill openings in wall or floor assembly where penetration is by cables, cable trays, conduits, ducts and pipes and poke-through termination devices, including electrical outlet boxes along with their means of support through wall or floor openings.
- .2 Single Component Fire Stop System: fire stop material that has Listed Systems Design and is used individually without use of high temperature insulation or other materials to create fire stop system.
- .3 Multiple Component Fire Stop System: exact group of fire stop materials that are Identified within Listed Systems Design to create on site fire stop system.
- .4 Tightly Fitted; (ref: NBC Part 3.1.9.1.1): penetrating items that are cast in place in buildings of noncombustible construction or have "0" annular space in buildings of combustible construction.
- .1 Words "tightly fitted" should ensure that integrity of fire separation is such that it prevents passage of smoke and hot gases to unexposed side of fire separation.
- 1.4 SUBMITTALS** .1 Provide submittals in accordance with Section 01 33 00 - Submittal Procedures.
- .2 Product Data:
- .1 Submit manufacturer's printed product literature, specifications and datasheet and include product characteristics, performance criteria, physical size, finish and limitations.
- .2 Submit WHMIS MSDS - Material Safety Data Sheets in accordance with Section 02 61 33 - Hazardous Materials.

- .3 Shop Drawings:
  - .1 Submit shop drawings to show location, proposed material, reinforcement, anchorage, fastenings and method of installation.
  - .2 Construction details should accurately reflect actual job conditions.
- .4 Quality assurance submittals: submit following in accordance with Section 01 45 00 - Quality Control.
  - .1 Test reports: in accordance with CAN-ULC-S101 for fire endurance and CANULC-S102 for surface burning characteristics.
    - .1 Submit certified test reports from approved independent testing laboratories, indicating compliance of applied fire stopping with specifications for specified performance characteristics and physical properties.
    - .2 Certificates: submit certificates signed by manufacturer certifying that materials comply with specified performance characteristics and physical properties.
    - .3 Manufacturer's Instructions: submit manufacturer's installation instructions and special handling criteria, installation sequence, cleaning procedures.
    - .4 Manufacturer's Field Reports: submit to manufacturer's written reports within 3 days of review, verifying compliance of Work, as described in PART 3 – FIELD QUALITY CONTROL.

**1.5 SAMPLES**

- .1 Submit samples in accordance with Section 01 33 00 - Submittal Procedures.
- .2 Submit duplicate 300 x 300 mm samples showing actual firestop material proposed for project.

**1.6 DELIVERY,  
STORAGE AND  
HANDLING**

- .1 Packing, shipping, handling and unloading:
  - .1 Deliver, store and handle materials in accordance with Section 01 61 00 - Common Product Requirements.
  - .2 Deliver, store and handle materials in accordance with manufacturer's written instructions.
  - .3 Deliver materials to the site in undamaged condition and in original unopened containers, marked to indicate brand name, manufacturer, and ULC markings.
- .2 Storage and Protection:
  - .1 Store materials indoors and in accordance with manufacturer's recommendations in clean, dry, well-ventilated area.

.2 Replace defective or damaged materials with new.

**1.7 WASTE  
MANAGEMENT AND  
DISPOSAL**

- .1 Separate and recycle waste materials in accordance with Section 01 74 19 - Construction/Demolition Waste Management And Disposal.
- .2 Collect and separate plastic, paper packaging and corrugated cardboard in accordance with Waste Management Plan.

**PART 2 - PRODUCTS**

**2.1 MATERIALS**

- .1 Fire stopping and smoke seal systems: in accordance with ULC-S115.
  - .1 Asbestos-free materials and systems capable of maintaining an effective barrier against flame, smoke and gases in compliance with requirements of ULC-S115 and not to exceed opening sizes for which they are intended [and conforming to special requirements specified in Part 3.
  - .2 Firestop system rating: In accordance with National Building Code (NBC).
- .2 Service penetration assemblies: certified by ULC in accordance with ULC-S115 and listed in ULC Guide No.40 U19.
- .3 Service penetration firestop components: certified by ULC in accordance with ULC-S115 and listed in ULC Guide No.40 U19.13 and ULC Guide No.40 U19.15 under the Label Service of ULC.
- .4 Fire-resistance rating of installed fire stopping assembly in accordance with NBC.
- .5 Fire stopping and smoke seals at openings intended for ease of re-entry such as cables: elastomeric seal.
- .6 Fire stopping and smoke seals at openings around penetrations for pipes, ductwork and other mechanical items requiring sound and vibration control: elastomeric seal.
- .7 Primers: to manufacturer's recommendation for specific material, substrate, and end use.
- .8 Water: potable, clean and free from injurious amounts of deleterious substances.
- .9 Damming and backup materials, supports and anchoring devices: to manufacturer's recommendations, and in accordance with tested assembly being installed as acceptable to authorities having jurisdiction.

- .10 Sealants for vertical joints: non-sagging.

### **PART 3 - EXECUTION**

#### **3.1 PREPARATION**

- .1 Examine sizes and conditions of voids to be filled to establish correct thicknesses and installation of materials. Ensure that substrates and surfaces are clean, dry and frost free.
- .2 Prepare surfaces in contact with fire stopping materials and smoke seals to manufacturer's instructions.
- .3 Maintain insulation around pipes and ducts penetrating fire separation without interruption to vapour barrier.
- .4 Mask where necessary to avoid spillage and over coating onto adjoining surfaces; remove stains on adjacent surfaces.
- .5 Comply with manufacturer's written recommendations or specifications, including product technical bulletins, handling, storage and installation instructions, and datasheets.

#### **3.2 INSTALLATION**

- .1 Install fire stopping and smoke seal material and components in accordance with ULC certification and manufacturer's instructions.
- .2 Seal holes or voids made by through penetrations, poke-through termination devices, and unpenetrated openings or joints to ensure continuity and integrity of fire separation are maintained.
- .3 Provide temporary forming as required and remove forming only after materials have gained sufficient strength and after initial curing.
- .4 Tool or trowel exposed surfaces to a neat finish.
- .5 Remove excess compound promptly as work progresses and upon completion.

#### **3.3 INSPECTION**

- .1 Notify Consultant when ready for inspection and prior to concealing or enclosing firestopping materials and service penetration assemblies.

#### **3.4 SCHEDULE**

- .1 Firestop and smoke seal at:
  - .1 Penetrations through fire-resistance rated masonry, concrete, and gypsum board partitions and walls.
  - .2 Edge of floor slabs at curtain wall and precast concrete panels.

- .3 Top of fire-resistance rated masonry and gypsum board partitions.
- .4 Intersection of fire-resistance rated masonry and gypsum board partitions.
- .5 Control and sway joints in fire-resistance rated masonry and gypsum board partitions and walls.
- .6 Penetrations through fire-resistance rated floor slabs, ceilings and roofs.
- .7 Openings and sleeves installed for future use through fire separations.
- .8 Around mechanical and electrical assemblies penetrating fire separations.
- .9 Rigid ducts: greater than 129 cm<sup>2</sup>: fire stopping to consist of bead of fire stopping material between retaining angle and fire separation and between retaining angle and duct, on each side of fire separation.

**3.5 MANUFACTURER'S  
FIELD SERVICES**

- .1 Obtain written report from manufacturer verifying compliance of Work, in handling, installing, applying, protecting and cleaning of product and submit Manufacturer's Field Reports as described in PART 1 - SUBMITTALS.
- .2 Provide manufacturer's field services consisting of product use recommendations and periodic site visits for inspection of product installation in accordance with manufacturer's instructions.
- .3 Schedule site visits, to review Work, as directed in PART 1 - QUALITY ASSURANCE.

**3.6 CLEAN UP**

- .1 Remove excess materials and debris and clean adjacent surfaces immediately after application.
- .2 Remove temporary dams after initial set of fire stopping and smoke seal materials.

  - .14 ASTM E 283 - Test Method for Determining Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen.
  - .15 ASTM E 331 - Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference.
  - .16 ASTM C679 – Standard Test Method for Tack-Free Time of Elastomeric Sealants.
  - .17 ASTM C719 – Standard Test Method for Adhesion and Cohesion of Elastomeric Joint Sealants Under Cyclic Movement (Hockman Cycle).

- .18 ASTM C1135 – Standard Test Method for Determining Tensile Adhesion Properties of Structural Sealants.
- .19 ASTM D412 - Standard Test Method for Vulcanized Rubber and Thermoplastic Rubbers and Thermoplastic Elastomers – Tension.
- .20 ASTM D2202 – Standard Test Method for Slump of Sealants.
  
- .2 Canadian General Standards Board (CGSB)
  - .1 CAN/CGSB-19.13-M87, Sealing Compound, One-Component, Elastomeric, Chemical Curing.
  - .2 CAN/CGSB-19.24-M90, Multi-component, Chemical Curing Sealing Compound.
  
- .3 Department of Justice Canada (Jus)
  - .1 Canadian Environmental Protection Act, 1999 (CEPA).
  
- .4 Health Canada/Workplace Hazardous Materials Information System (WHMIS)
  - .1 Material Safety Data Sheets (MSDS).
  
- .5 Transport Canada (TC)
  - .1 Transportation of Dangerous Goods Act, 1992 (TDGA).
  
- .6 Underwriter's Laboratories of Canada (ULC)
  - .1 CAN/ULC S102-07 Standard Method of Test for Surface Burning Characteristics of Building Materials and Assemblies.

#### 1.4 SUBMITTALS

- .1 Submit product data in accordance with Section 00 10 00.
  
- .2 Manufacturer's product to describe.
  - .1 Caulking compound.
  - .2 Primers.
  - .3 Sealing compound, each type, including compatibility when different sealants are in contact with each other.
  
- .3 Submit samples in accordance with Section 00 10 00.
  
- .4 Submit duplicate samples of each type of material and colour.
  
- .5 Cured samples of exposed sealants for each colour where required to match adjacent material.
  
- .6 Submit manufacturer's instructions in accordance with Section 00 10 00.
  - .1 Instructions to include installation instructions for each product used.

#### 1.5 QUALITY ASSURANCE/MOCK-UP

- .1 Construct mock-up in accordance with Section 00 10 00.

- .2 Construct mock-up to show location, size, shape and depth of joints complete with back-up material, primer, caulking and sealant.
- .3 Mock-up will be used:
  - .1 To judge workmanship, substrate preparation, operation of equipment and material application.
- .4 Locate where directed.
- .5 Allow 48 hours for inspection of mock-up by Consultant before proceeding with sealant work.
- .6 When accepted, mock-up will demonstrate minimum standard of quality required for this Work. Approved mock-up may remain as part of finished Work.
- .7 Adhesion test: Apply silicone sealant to small area and perform adhesion test in accordance with ASTM C1193, Method A, to determine if primer is required to achieve adequate adhesion. If necessary, apply primer at rate and in accordance with manufacturer's instructions.

#### 1.6 WARRANTY

- .1 Provide a written warranty in the name of the Owner: Original statement on Installer's letterhead in which Installer agrees to repair or replace joint sealants that demonstrate deterioration or failure within warranty period specified.
  - .1 Warranty Period: Five years from date of Certificate of Substantial Performance.
- .2 Special Manufacturer's Warranty: Manufacturer's Standard form in which joint sealant manufacturer agrees to furnish joint sealants to repair or replace those that demonstrate deterioration or failure under normal use within warranty period specified.
  1. Warranty Period for Silicone Sealants: 20 years date of Certificate of Substantial Performance.
- .3 Warranty Conditions: Special warranties exclude deterioration or failure of joint sealants in normal use due to structural movement resulting in stresses on joint sealants exceeding sealant manufacturer's written specifications, joint substrate deterioration, mechanical damage, or normal accumulation of dirt or other contaminants.

#### 1.7 DELIVERY, STORAGE, AND HANDLING

- .1 Deliver and store materials in original wrappings and containers with manufacturer's seals and labels, intact. Protect from freezing, moisture, water and contact with ground or floor.

**1.8 WASTE  
MANAGEMENT AND  
DISPOSAL**

- .1 Separate waste materials for recycling in accordance with Section 01 15 45.
- .2 Remove from site and dispose of packaging materials at appropriate recycling facilities.
- .3 Collect and separate for disposal packaging material in appropriate on-site bins for recycling in accordance with Waste Management Plan.
- .4 Place materials defined as hazardous or toxic in designated containers.
- .5 Handle and dispose of hazardous materials in accordance with the CEPA, TDGA, Regional and Municipal regulations.
- .6 Unused sealant material must not be disposed of into sewer system, into streams, lakes, onto ground or in other location where it will pose health or environmental hazard.
- .7 Divert unused joint sealing material from landfill to official hazardous material collections.
- .8 Empty plastic joint sealer containers are not recyclable. Do not dispose of empty containers with plastic materials destined for recycling.

**1.9 PROJECT  
CONDITIONS**

- .1 Environmental Limitations:
  - .1 Do not proceed with installation of joint sealants under following conditions:
    - .1 When ambient and substrate temperature conditions are outside limits permitted by joint sealant manufacturer or are below 4.4 degrees C.
    - .2 When joint substrates are wet.
  - .2 Joint-Width Conditions:
    - .1 Do not proceed with installation of joint sealants where joint widths are less than those allowed by joint sealant manufacturer for applications indicated.
  - .3 Joint-Substrate Conditions:
    - .1 Do not proceed with installation of joint sealants until contaminants capable of interfering with adhesion are removed from joint substrates.

**1.10 ENVIRONMENTAL  
REQUIREMENTS**

- .1 Comply with requirements of Workplace Hazardous Materials Information System (WHMIS) regarding use, handling, storage, and disposal of hazardous materials; and regarding labelling and provision of Material Safety Data Sheets (MSDS) acceptable to Labour Canada.

- .2 Conform to manufacturer's recommended temperatures, relative humidity, and substrate moisture content for application and curing of sealants including special conditions governing use.
- .3 Ventilate area of work by use of approved portable supply and exhaust fans.

## PART 2 - PRODUCTS

### 2.1 SEALANT MATERIALS

- .1 Products and manufacturers specified establish performance and quality required and are not intended to restrict submission by other manufacturers.
- .2 Acceptance of Products from other manufacturers will be subject to review by the Consultant, for conformity with the Specifications and meeting the physical characteristics of the specified Products. Include compliance with referenced standards. Submittals which do not include adequate data for the product evaluation will not be considered.
- .3 If unapproved, substitute products are included in the bid, the specified Products shall be provided without additional compensation.
- .4 Do not use caulking that emits strong odours, contains toxic chemicals or is not certified as mould resistant in air handling units.
- .5 When low toxicity caulks are not possible, confine usage to areas which off gas to exterior, are contained behind air barriers, or are applied several months before occupancy to maximize off gas time.
- .6 Where sealants are qualified with primers use only these primers.
- .7 Compatibility: Provide joint sealants and accessory materials that are compatible with one another, and with materials in close proximity under use conditions, as demonstrated by sealant manufacturer using ASTM C1087 testing and related experience.
- .8 Joint Sealant Standard: Comply with ASTM C 920 and other specified requirements for each liquid-applied joint sealant.
- .9 Stain Test Characteristics: Where sealants are required to be non-staining, provide sealants tested per ASTM C 1248 as non-staining on porous joint substrates indicated for Project.

### 2.2 SEALANT MATERIAL DESIGNATIONS

- .1 Type 1: Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 100/50, for Use T, NT; SWRI validation.

- .1 Basis of Design Product: **DOW CORNING® 790 Silicone Building Sealant.**
  - .2 Hardness, ASTM C 661: 15 durometer Shore A.
  - .3 Volatile Organic Compound (VOC) Content: 26 g/L maximum.
  - .4 Staining, ASTM C 1248: None on concrete, granite, limestone, and brick.
  - .5 Colour: As selected by Architect from manufacturer's full line.
- .2 Type 2: Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 50, for Use NT; SWRI validation.
- .1 Basis of Design Product: **DOW CORNING® 756 SMS Building Sealant.**
  - .2 Hardness, ASTM C 661: 35 durometer Shore A.
  - .3 Volatile Organic Compound (VOC) Content: 60 g/L maximum
  - .4 Staining, ASTM C 1248: None on white marble.
  - .5 Colour: As selected by Architect from manufacturers full line.
- .3 Type 4: Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 50, for Use NT, G, A, and O; SWRI validation.
- .1 Basis of Design Product: **DOW CORNING® 795 Silicone Building Sealant.**
  - .2 Hardness, ASTM C 661: 35 - 45 durometer Shore A.
  - .3 Volatile Organic Compound (VOC) Content: 32 g/L maximum
  - .4 Staining, ASTM C 1248: None on concrete, granite, limestone, and brick.
  - .5 Colour: As selected by Architect from manufacturers full line.
- .4 Type 6: Single-Component, Nonsag, Neutral-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT; SWRI validation.
- .1 Basis of Design Product: **DOW CORNING® 758 Silicone Weather Barrier Sealant.**
  - .2 Hardness, ASTM D 2240: 45 durometer Shore A.
  - .3 Volatile Organic Compound (VOC) Content: 61 g/L maximum
  - .4 Colour: White.
- .5 Type 7: Single-Component, Nonsag, Acid-Curing Silicone Joint Sealant: ASTM C 920, Type S, Grade NS, Class 25, for Use NT.
- .1 Basis of Design Product: **DOW CORNING® 999-A Silicone Building & Glazing Sealant.**
  - .2 Hardness, ASTM D 2240: 25 durometer Shore A minimum.
  - .3 Volatile Organic Compound (VOC) Content: 36 g/L maximum
  - .4 Ultimate Tensile, ASTM D 412: 325 psi (1.2 MPA) at 21 day cure (Dumbbell)
  - .5 Colour: As selected by Architect from manufacturers full line.

.6 WEATHER BARRIER TRANSITIONS

- .1 Type 13: Silicone Elastomer Weather Barrier Transition: Highly flexible clear flashing and transition strip and pre-molded corners for bonding with silicone sealant to weather barrier substrates and to adjacent curtain wall, storefront, and window frames and other transition substrates.
  - .1 Basis of Design Product: **DOW CORNING® Silicone Transition Strip (STS)**.
  - .2 Hardness, ASTM D 2240: 50 - 60 durometer Shore A.
  - .3 Colour: Translucent
  - .4 Air Infiltration, ASTM E 283: Maximum 0.025 cfm/sq. ft. (0.127 L/s per sq. m) at 6.24 lbf/sq. ft. (300 Pa).
  - .5 Water Penetration under Static Pressure, ASTM E 331: None at 15 lbf/sq. ft. (720 Pa).
  - .6 Movement Capability: Not less than plus 200, minus 75 percent.
  - .7 Tensile Strength, ASTM D 412: Not less than 800 psi (5.5 MPa).
  - .8 Tear Strength, ASTM D 624: Not less than 200 psi (16 kN/m).
  - .9 Elongation, ASTM D 412: Not less than 400 percent.
  - .10 Bonding Sealant: Manufacturer's recommended neutral-curing silicone.

**2.3 SEALANT SELECTION**

- .1 Perimeters of exterior openings where aluminum frames meet exterior facade of building (i.e. brick, block, precast masonry): Sealant Type 2 or Type 4.
- .2 Coping joints and coping-to facade joints: Sealant Type 2.
- .3 Cornice and wash or horizontal surface joints: Sealant Type 2.
- .4 Exterior joints in horizontal wearing surfaces (as itemized): Sealant Type 1.
- .5 Seal interior perimeters of exterior openings as detailed on drawings: Sealant Type 1 or Type 4.
- .6 Perimeters of interior frames, as detailed and itemized: Sealant Type 4.
- .7 Joints at tops of non-load bearing masonry walls at the underside of poured concrete: Sealant Type 1.
- .8 Exterior door thresholds bead of sealant over entire length of threshold: Sealant Type 2.

- .9 Glazing butt sealant: Type 7 for clear interior or Type 4 for exterior.
- .10 Air Barrier membranes to facades or window frames: Sealant Type 6.

#### 2.4 ACCESSORIES

- .1 Joint Substrate Primers: Substrate primer recommended by sealant manufacturer for application.
- .2 Cylindrical Sealant Backing: ASTM C 1330, Type B non-absorbent, bi-cellular material with surface skin, or Type O open-cell polyurethane, as recommended by sealant manufacturer for application.
- .3 Bond Breaker Tape: Polymer tape compatible with joint sealant materials and recommended by sealant manufacturer.

#### 2.5 JOINT CLEANER

- .1 Non-corrosive and non-staining type, compatible with joint forming materials and sealant recommended by sealant manufacturer.
- .2 Primer: as recommended by manufacturer.

### PART 3 - EXECUTION

#### 3.1 PROTECTION

- .1 Protect installed Work of other trades from staining or contamination.

#### 3.2 SURFACE PREPARATION

- .1 Examine joint sizes and conditions to establish correct depth to width relationship for installation of backup materials and sealants.
- .2 Clean bonding joint surfaces of harmful matter substances including dust, rust, oil grease, and other matter which may impair Work.
- .3 Do not apply sealants to joint surfaces treated with sealer, curing compound, water repellent, or other coatings unless tests have been performed to ensure compatibility of materials. Remove coatings as required.
- .4 Ensure joint surfaces are dry and frost free.
- .5 Prepare surfaces in accordance with manufacturer's directions.

#### 3.3 PRIMING

- .1 Where necessary to prevent staining, mask adjacent surfaces prior to priming and caulking.

- .2 Prime sides of joints in accordance with sealant manufacturer's instructions immediately prior to caulking.
  
- 3.4 BACKUP MATERIAL**
  - .1 Apply bond breaker tape where required to manufacturer's instructions.
  - .2 Install joint filler to achieve correct joint depth and shape, with approximately 30% compression.
  
- 3.5 MIXING**
  - .1 Mix materials in strict accordance with sealant manufacturer's instructions.
  
- 3.6 APPLICATION**
  - .1 Sealant.
    - .1 Apply sealant in accordance with manufacturer's written instructions.
    - .2 Mask edges of joint where irregular surface or sensitive joint border exists to provide neat joint.
    - .3 Apply sealant in continuous beads.
    - .4 Apply sealant using gun with proper size nozzle.
    - .5 Use sufficient pressure to fill voids and joints solid.
    - .6 Form surface of sealant with full bead, smooth, free from ridges, wrinkles, sags, air pockets, embedded impurities.
    - .7 Tool exposed surfaces before skinning begins to give slightly concave shape.
    - .8 Remove excess compound promptly as work progresses and upon completion.
  - .2 Curing.
    - .1 Cure sealants in accordance with sealant manufacturer's instructions.
    - .2 Do not cover up sealants until proper curing has taken place.
  - .3 Cleanup.
    - .1 Clean adjacent surfaces immediately and leave Work neat and clean.
    - .2 Remove excess and droppings, using recommended cleaners as work progresses.
    - .3 Remove masking tape after initial set of sealant.

### 1.3 SHOP DRAWINGS

- .1 Submit shop drawings in accordance with Section 00 10 00 - Submittal Procedures.
- .2 Indicate each type of door, material, steel core thicknesses, mortises, reinforcements, location of exposed fasteners, openings, glazed arrangement of hardware, fire rating and finishes.
- .3 Indicate each type frame material, core thickness, reinforcements, glazing stops, location of anchors and exposed fastenings, reinforcing fire rating and finishes.
- .4 Include schedule identifying each unit, with door marks and numbers relating to numbering on drawings and door schedule.
- .5 Submit test and engineering data, and installation instructions.

### 1.4 REQUIREMENTS

- .1 Steel fire rated doors and frames: labelled and listed by an organization accredited by Standards Council of Canada in conformance with CAN4-S104M for ratings specified or indicated.
- .2 Provide fire labelled frame products for those openings requiring fire protection ratings, as scheduled. Test products in strict conformance with CAN4-S104, and list by nationally recognized agency having factory inspection service and construct as detailed in Follow-Up Service Procedures/Factory Inspection Manuals issued by listing agency to individual manufacturers.

### 1.5 WARRANTY

- .1 Doors and frames shall be guaranteed against manufacturing defects for a period of three (3) years from the date of Certificate of Substantial Performance. Where defects occur, the Contractor shall be responsible for all costs, including painting, hanging and installing hardware, associated with replacing the defective doors.

## PART 2 - PRODUCTS

### 2.1 MATERIALS

- .1 Hot dipped galvanized steel sheet: to ASTM A 653M, ZF75, minimum base steel thickness in accordance with CSDMA Table 1 - Thickness for Component Parts.

- 
- .2 Reinforcement channel: to CSA G40.20/G40.21, Type 44W, coating designation to ASTM A 653M, ZF75.
- 2.2 DOOR CORE MATERIALS**
- .1 Stiffened construction: face sheets welded, insulated core.  
.1 Fibreglass: to CAN/ULC-S702, semi-rigid density 24 kg/m<sup>3</sup>.
- .2 Temperature rise rated (TRR): core composition to limit temperature rise on unexposed side of door to 250° C at 60 minutes. Core to be tested as part of a complete door assembly, in accordance with CAN4-S104, ASTM E 152 or NFPA 252, covering Standard Method of Tests of Door Assemblies and listed by nationally recognized testing agency having factory inspection service.
- 2.3 PRIMER**
- .1 Touch-up prime CAN/CGSB-1.181.
- 2.4 PAINT**
- .1 Field paint steel doors and frames in accordance with Section 09 91 23 - Interior Painting. Protect weatherstrips from paint. Provide final finish shall be free of scratches or other blemishes.
- 2.5 ACCESSORIES**
- .1 Door silencers: single stud rubber/neoprene type.
- .2 Door bottom drop seal: refer to Section 08 71 10 – Door Hardware.
- .3 Metallic paste filler: to manufacturer's standard.
- .4 Fire labels: metal riveted.
- .5 Sealant: In accordance with Section 07 92 00 – Joint Sealing.
- 2.6 FRAMES FABRICATION GENERAL**
- .1 Fabricate frames in accordance with CSDMA specifications.
- .2 Fabricate frames to profiles and maximum face sizes as indicated.
- .3 Interior frames: 1.6 mm welded type construction.
- .4 Blank, reinforce, drill and tap frames for mortised, templated hardware, and electronic hardware using templates provided by finish hardware supplier. Reinforce frames for surface mounted hardware.
- .5 Protect mortised cutouts with steel guard boxes.
- .6 Prepare frame for door silencers, 3 for single door.
- .7 Manufacturer's nameplates on frames and screens are not permitted.

- .8 Conceal fastenings except where exposed fastenings are indicated.
- .9 Provide factory-applied touch up primer at areas where zinc coating has been removed during fabrication.
- .10 Insulate frame components with fibreglass insulation.

**2.7 FRAME ANCHORAGE**

- .1 Provide appropriate anchorage to floor and wall construction.
- .2 Locate each wall anchor immediately above or below each hinge reinforcement on hinge jamb and directly opposite on strike jamb.
- .3 Provide 2 anchors for rebate opening heights up to 1520 mm and 1 additional anchor for each additional 760 mm of height or fraction thereof.
- .4 Locate anchors for frames in existing openings not more than 150 mm from top and bottom of each jambs and intermediate at 660 mm o.c. maximum.

**2.8 FRAMES: WELDED TYPE**

- .1 Welding in accordance with CSA W59.
- .2 Accurately mitre or mechanically joint frame product and securely weld on inside of profile.
- .3 Cope accurately and securely weld butt joints of mullions, transom bars, centre rails and sills.
- .4 Grind welded joints and corners to a flat plane, fill with metallic paste and sand to uniform smooth finish.
- .5 Securely attach floor anchors to inside of each jamb profile.
- .6 Weld in 2 temporary jamb spreaders per frame to maintain proper alignment during shipment.

**2.9 DOOR FABRICATION GENERAL**

- .1 Doors: swing type, flush, with provision for louvre openings as indicated.
- .2 Fire Rated Doors: Insulated hollow steel construction.
- .3 Fabricate doors with longitudinal edges welded. Seams: grind welded joints to a flat plane, fill with metallic paste filler and sand to a uniform smooth finish
- .4 Doors: manufacturers' proprietary construction, tested and/or engineered as part of a fully operable assembly, including door, frame, gasketing and hardware.

- .5 Blank, reinforce, drill doors and tap for mortised and templated hardware.
- .6 Factory prepare holes 12.7 mm diameter and larger except mounting and through-bolt holes, on site, at time of hardware installation.
- .7 Reinforce doors where required, for surface mounted hardware. Provide inverted, recessed, spot welded channels to top and bottom of interior doors.
- .8 Provide factory-applied touch-up primer at areas where zinc coating has been removed during fabrication.
- .9 Provide fire labelled doors for those openings requiring fire protection ratings, as scheduled. Test such products in strict conformance with CAN4-S104 and list by nationally recognized agency having factory inspection service and construct as detailed in Follow-Up Service Procedures/Factory Inspection Manuals issued by listing agency to individual manufacturers.

**2.10 HOLLOW STEEL  
CONSTRUCTION**

- .1 Form each face sheet from 1.6 mm sheet steel.
- .2 Reinforce doors with vertical stiffeners, securely welded to each face sheet at 150 mm on centre maximum.
- .3 Fill voids between stiffeners of interior doors with fiberglass temperature rise rated core.

**PART 3 - EXECUTION**

**3.1 INSTALLATION  
GENERAL**

- .1 Install labelled steel fire rated doors and frames to NFPA 80 except where specified otherwise.
- .2 Install doors and frames to CSDMA Installation Guide.

**3.2 FRAME  
INSTALLATION**

- .1 Set frames plumb, square, level and at correct elevation.
- .2 Secure anchorages and connections to adjacent construction.
- .3 Brace frames rigidly in position while building-in. Install temporary horizontal wood spreader at third points of door opening to maintain frame width. Provide vertical support at centre of head for openings over 1200 mm wide. Remove temporary spreaders after frames are built-in.
- .4 Make allowances for deflection of structure to ensure structural loads are not transmitted to frames.

.5 Caulk perimeter of frames between frame and adjacent material.

**3.3 DOOR  
INSTALLATION**

.1 Install doors and hardware in accordance with hardware templates and manufacturer's instructions and Section 08 71 10 - Door Hardware - General.

.2 Provide even margins between doors and jambs and doors and finished floor and thresholds as follows.

.1 Hinge side: 1.0 mm.

.2 Latchside and head: 1.5 mm.

.3 Finished floor, top of carpet, noncombustible sill, and thresholds: 13 mm.

.3 Adjust operable parts for correct function.

.4 Install louvres.

**3.4 FINISH REPAIRS**

.1 Touch up with primer finishes damaged during installation.

.2 Fill exposed frame anchors and surfaces with imperfections with metallic paste filler and sand to a uniform smooth finish.

**3.5 GLAZING**

.1 Install glazing for doors and frames in accordance with Section 08 80 50 - Glazing.

**END OF SECTION**

**PART 1 - GENERAL**

**1.1 RELATED SECTIONS**

- .1 Section 08 11 00 – Metal Doors and Frames.

  - .15 CAN/CSA-B651-04.

**1.3 SUBMITTALS**

- .1 Product Data:
  - .1 Submit manufacturer's printed product literature, specifications and data sheet in accordance with Section 00 10 00 - Submittal Procedures.

- .2 Hardware List:
  - .1 Submit contract hardware list in accordance with Section 00 10 00 - Submittal Procedures.
  - .2 Indicate specified hardware, including make, model, material, function, size, finish and other pertinent information.
- .3 Manufacturer's Instructions:
  - .1 Submit manufacturer's installation instructions.
- .4 Closeout Submittals
  - .1 Provide operation and maintenance data for door closers, locksets, door holders, electrified hardware for incorporation into manual specified in Section 00 10 00 - Closeout Submittals.

**1.4 QUALITY ASSURANCE**

- .1 Regulatory Requirements:
  - .1 Hardware for doors in fire separations and exit doors certified by a Canadian Certification Organization accredited by Standards Council of Canada.
- .2 Test Reports: certified test reports showing compliance with specified performance characteristics and physical properties.
- .3 Certificates: product certificates signed by manufacturer certifying materials comply with specified performance characteristics and criteria and physical requirements.

**1.5 DELIVERY, STORAGE, AND HANDLING**

- .1 Packing, Shipping, Handling and Unloading:
  - .1 Deliver, store, handle and protect materials in accordance with Section 00 10 00.
  - .2 Package each item of hardware including fastenings, separately or in like groups of hardware, label each package as to item definition and location.
- .2 Storage and Protection:
  - .1 Store finishing hardware in locked, clean and dry area.

**1.6 MAINTENANCE**

- .1 Extra Materials:
  - .1 Provide maintenance materials in accordance with Section 00 10 00 - Closeout Submittals.
  - .2 Supply two sets of wrenches for door closers, locksets.

**PART 2 - PRODUCTS**

**2.1 HARDWARE ITEMS**

- .1 Use one manufacturer's products only for similar items.

**2.2 DOOR HARDWARE**

- .1 Locks and latches:
  - .1 Bored and preassembled locks and latches: to CAN/CGSB-69.17, series 2000 preassembled lock, grade 1, designed for function and keyed As stated in Hardware Schedule.
  - .2 Mortise locks and latches: to CAN/CGSB-69.29, series 1000 mortise lock, grade 1, designed for function and keyed as stated in Hardware Schedule.
  - .3 Lever handles: plain design.
  - .4 Roses: round.
  - .5 Normal strikes: box type, lip projection not beyond jamb.
  - .6 Cylinders: key into keying system as noted.
  - .8 Finished to BHMA 626.
- .2 Butts and hinges:
  - .1 Butts and hinges: to CAN/CGSB-69.18, designated by letter A and numeral identifiers, followed by size and finish, listed in Hardware Schedule.
  - .2 Acceptable Manufacturer:
    - .1 Hager ECBB1100NRP finished to BHMA C26D.
- .3 Door Closers and Accessories:
  - .1 Door Controls (Closers): to CAN/CGSB-69.20, Designated Letter C.
    - .1 Acceptable Manufacturer:
      - .1 Corbin Russwin DC 3210 Parallel Arm Mounting, finished to BHMA 689.
    - .2 Door controls - overhead holders: to CAN/CGSB-69.24, designated by letter C, finished to C32D.
- .4 Architectural door trim: to CAN/CGSB-69.22, designated by letter J and numeral identifiers as listed below, finished to BHMA C26D.
  - .1 Door protection plates: kick plate type, 1.27 mm thick stainless steel finished to BHMA 630.
    - .1 Acceptable Manufacturer:
      - .1 Don-Jo, Commercial Kickplate 90.
    - .2 Push plates: type 1.27 mm thick size 4" x 16", stainless steel finished to BHMA 630.
      - .1 Acceptable Manufacturer:
        - .1 Don-Jo, Push Plate CFK71 and 71.
    - .3 Pull units: stainless steel, size 4" x 16", finished to BHMA 630.
      - .1 Acceptable Manufacturer:
        - .1 Don-Jo, Pull Plate 7137 and CFC7115.
  - .5 Door bottom seal: heavy duty door seal of extruded aluminum frame and solid closed cell neoprene seal, surface mounted, closed ends, adjustable automatic retract mechanism when door is open, clear anodized finish.
  - .6 Thresholds: 150 mm wide x full width of door opening, extruded aluminum, serrated surface.

- .7 Door Stops: Floor Mounted Door Stops
  - .1 Acceptable Manufacturer:
    - .1 Gallery Special Hardware GSH-209, finish to BHMA 626.
- .8 Weatherstripping:
  - .1 Head and jamb seal:
    - .1 Extruded aluminum frame and hollow closed cell neoprene insert, clear anodized finish.
    - .2 Adhesive backed neoprene material.
- .9 Barrier Free Pneumatic Door Operator:
  - .1 Heavy duty pneumatically assisted door closer, capable of multi-door operation, complete with actuators, control boxes, pneumatic tubing and compressed air source.
  - .2 Self contained control box/compressor combination for independent operation of two door leaves.
  - .3 Control boxes: complete with electric strike relay.
  - .4 Mount operators on either push or pull sides of doors as required to place them inside rooms.
  - .5 Actuation of operators by push plate.
  - .6 Electrical box and actuator/push plate: Hardwired low voltage actuator with heavy extruded aluminum push plate 150mm wide and 914mm high with "PUSH TO OPEN" and wheelchair symbol engraved blue. Box 51 mm wide x 102 mm high x 50 mm deep single gang electrical box, flush mounted in wall, locations indicated.
  - .7 Provide switched line voltage to control box. Locate switch adjacent to box.
  - .8 Provide low voltage wiring to each actuator and 6 mm diameter air tubing to each operator.
  - .9 Mount control box in location as directed by Departmental Representative.

### 2.3 FASTENINGS

- .1 Use only fasteners provided by manufacturer. Failure to comply may void warranties and applicable licensed labels.
- .2 Supply screws, bolts, expansion shields and other fastening devices required for satisfactory installation and operation of hardware.
- .3 Exposed fastening devices to match finish of hardware.
- .4 Where pull is scheduled on one side of door and push plate on other side, supply fastening devices, and install so pull can be secured through door from reverse side. Install push plate to cover fasteners.
- .5 Use fasteners compatible with material through which they pass.

### 2.4 KEYING

- .1 Doors, locks to be keyed as directed by Departmental Representative.
- .2 Provide keys in duplicate for every lock in this Contract.

- .3 Provide three masterkeys for each MK or GMK group.
- .4 Stamp keying code numbers on keys and cylinders.
- .5 Provide construction cores.
- .6 Provide all permanent cores and keys to Departmental Representative.

### **PART 3 - EXECUTION**

#### **3.1 MANUFACTURER'S INSTRUCTIONS**

- .1 Compliance: comply with manufacturer's written data, including product technical bulletins, product catalogue installation instructions, product carton installation instructions, and data sheets.
- .2 Furnish metal door and frame manufacturers with complete instructions and templates for preparation of their work to receive hardware.
- .3 Furnish manufacturers' instructions for proper installation of each hardware component.

#### **3.2 INSTALLATION**

- .1 Install hardware to standard hardware location dimensions in accordance with Canadian Metric Guide for Steel Doors and Frames (Modular Construction) prepared by Canadian Steel Door and Frame Manufacturers' Association.
- .2 Where door stop contacts door pulls, mount stop to strike bottom of pull.
- .3 Install key control cabinet.
- .4 Use only manufacturer's supplied fasteners. Failure to comply may void manufacturer's warranties and applicable licensed labels. Use of "quick" type fasteners, unless specifically supplied by manufacturer, is unacceptable.
- .5 Remove construction cores when directed by Departmental Representative; install permanent cores and check operation of locks.

#### **3.3 ADJUSTING**

- .1 Adjust door hardware, operators, closures and controls for optimum, smooth operating condition, safety and for weather tight closure.
- .2 Lubricate hardware, operating equipment and other moving parts.
- .3 Adjust door hardware to provide tight fit at contact points with frames.

**3.4 CLEANING**

- .1 Perform cleaning after installation to remove construction and accumulated environmental dirt.
- .2 Clean hardware with damp rag and approved non-abrasive cleaner, and polish hardware in accordance with manufacture's instructions.
- .3 Remove protective material from hardware items where present.
- .4 Upon completion of installation, remove surplus materials, rubbish, tools and equipment barriers.

**3.5 DEMONSTRATION**

- .1 Keying System Setup and Cabinet:
  - .1 Set up key control system with file key tags, duplicate key tags, numerical index, alphabetical index and key change index, label shields, control book and key receipt cards.
  - .2 Place file keys and duplicate keys in key cabinet on their respective hooks.
  - .3 Lock key cabinet and turn over key to Departmental Representative.
- .2 Maintenance Staff Briefing:
  - .1 Brief maintenance staff regarding:
    - .1 Proper care, cleaning, and general maintenance of projects complete hardware.
    - .2 Description, use, handling, and storage of keys.
    - .3 Use, application and storage of wrenches for door closers, locksets.
- .3 Demonstrate operation, operating components, adjustment features, and lubrication requirements.

**3.6 SCHEDULE**

- .1 Building M-2:
  - .1 Single Door 124:
    - .1 3 pairs hinges
    - .2 1 pull unit
    - .3 1 push plate
    - .4 1 kickplate
    - .5 1 closer device
    - .6 1 floor stop
    - .7 1 classroom deadlock with thumbturn inside
  - .2 Single Door 124A:
    - .1 3 pairs hinges
    - .2 1 kickplate
    - .3 1 floor stop
    - .4 1 lockset – function: closet

- .3 Single Door 133:
  - .1 3 pairs hinges
  - .2 1 kickplate
  - .3 1 closer device
  - .4 1 barrier-free door operator with two buttons
  - .5 1 floor stop
  - .6 1 lockset – function: passage
- .4 Single Door 133A:
  - .1 3 pairs hinges
  - .2 1 kickplate
  - .3 1 closer device
  - .4 1 barrier-free door operator with two buttons
  - .5 1 lockset – function: Privacy with “Occupied” indicator
  - .6 1 floor stop
- .5 Single Door 133B:
  - .1 3 pairs hinges
  - .2 1 kickplate
  - .3 1 pull unit
  - .4 1 push plate
  - .5 1 closer device
  - .6 1 barrier-free door operator with two push buttons
  - .7 1 floor stop
  - .8 1 classroom deadlock with thumbturn inside
- .6 Single Door 271A:
  - .1 3 pairs hinges
  - .2 1 kickplate
  - .3 1 closer device
  - .4 1 lockset – function: Privacy with “Occupied” indicator
  - .5 Floor stop
- .7 Single Door 271B:
  - .1 3 pairs hinges
  - .2 1 kickplate
  - .3 1 closer device
  - .4 1 pull unit
  - .5 1 push plate
  - .6 1 classroom deadlock with thumbturn inside
- .2 Building M-59:
  - .1 Single Door 129A:
    - .1 3 pairs hinges
    - .2 1 pull unit
    - .3 1 push plate
    - .4 1 kickplate
    - .5 1 closer device
    - .6 1 barrier-free door operator with two buttons
    - .7 1 classroom deadlock with 1 thumbturn inside
    - .8 1 overhead stop
    - .9 1 weatherstripping
    - .10 1 bottom seal
    - .11 1 aluminum threshold

- .2 Single Door 129B:
  - .1 3 pairs hinges
  - .2 1 pull unit
  - .3 1 push plate
  - .4 1 kickplate
  - .5 1 closer device
  - .6 1 floor stop
  - .7 1 weatherstripping
  - .8 1 bottom seal
  - .9 1 aluminum threshold
- .3 Single Door 104:
  - .1 3 pairs hinges
  - .2 1 kickplate
  - .3 1 closer device
  - .4 1 lockset – function: Privacy with “Occupied” indicator
  - .5 1 overhead stop
- .4 Single Door 115:
  - .1 3 pairs hinges
  - .2 1 kickplate
  - .3 1 closer device
  - .4 1 barrier-free door operator with two push buttons
  - .5 1 pull unit
  - .6 1 push plate
  - .7 1 classroom deadlock with thumbturn inside
  - .8 1 overhead stop

**END OF SECTION**

**PART 1 - GENERAL**

**1.1 REFERENCES**

- .1 Government of Canada
  - .1 Canada Labour Code, WHMIS datasheets.

**1.2 SUBMITTALS**

- .1 Submittals in accordance with Section 00 10 00.
- .2 Product Data: submit WHMIS MSDS - Material Data Sheets in accordance with Section 02 61 33 - Hazardous Materials.
- .3 Submit shop drawings and product data in accordance with Section 00 10 00.
- .4 Submit samples in accordance with Section 00 10 00.
  - .1 Submit one 500 x 500 mm sample of film installed on 6 mm thick clear plate glass.
- .5 Submit Closeout Submittals in accordance with Section 00 10 00.
  - .1 Provide operation and maintenance data for window film for incorporation into manual specified in Section 01 78 00 - Closeout Submittals.
  - .2 Follow manufacturers written instructions for care and maintenance of blackout film.
  - .3 Use only cleaning solution recommended by manufacturer for regularly scheduled cleaning of security film.

**1.3 QUALITY ASSURANCE**

- .1 Health and Safety:
  - .1 Comply with requirements of WHMIS regarding use, handling, storage, and disposal of hazardous materials; and regarding labelling and provision of material safety data sheets acceptable to Canada Labour Code.

**1.4 DELIVERY, STORAGE AND HANDLING**

- .1 Deliver, store and handle materials in accordance with Section 00 10 00.
- .2 Provide and maintain dry, off-ground weatherproof storage.
- .3 Store rolls of film flat on cross supports. Do not stand rolls of film on end.
- .4 Remove from storage, in quantities required for same day use.
- .5 Store materials in accordance with manufacturers written instructions.

- .6 Waste Management and Disposal:
  - .1 Separate and recycle waste materials.
  - .2 Place materials defined as hazardous or toxic waste in designated containers.
  - .3 Ensure emptied containers are sealed and stored safely.

**1.6 WARRANTY**

- .1 Work of this Section 08 87 53 - Applied Films 5 years warranty period.
- .2 Contractor hereby warrants that Blockout and Safety Strip Film will stay in place without delaminating, peeling or blistering.
- .3 Ensure warranty includes items as follows:
  - .1 Maintaining adhesion properties without blistering, bubbling or delaminating from glass surface.
  - .2 Maintaining appearance without discolouration.
  - .3 Removing, replace and reapply defective materials.

**1.7 MAINTENANCE DATA**

- .1 Provide operation and maintenance data for window film for incorporation into manual specified in Section 00 10 00.

**PART 2 - PRODUCTS**

**2.1 MATERIALS**

- .1 Basis of Design Product – Blockout Film:
  - .1 3M Blockout Film 3635-226b.
  - .2 Light transmission: less than 1%, typical.
  - .3 Thickness: without adhesive 0.10 mm (4 ml).
  - .4 Adhesive Type: clear.
  - .5 Adhesive Colour: clear.
  - .6 Tensile Strength: 0.9 kg/CM at 23<sup>0</sup>C.
  - .7 Chemical Resistance: resistance to mild alkalds, mild acids and salt.
  - .8 Resistance to water.
- .2 Basis of Design Product – Translucent Film:
  - .1 3M Fasara Interior design privacy film.
  - .2 Thickness: without adhesive 0.10 mm (4 ml).
  - .3 Adhesive Type: clear.
  - .4 Adhesive Colour: clear.
  - .5 Tensile Strength: 0.9 kg/CM at 23<sup>0</sup>C.
  - .6 Chemical Resistance: resistance to mild alkalds, mild acids

**PART 3 - EXECUTION**

**3.1 PREPARATION**

- .1 Clean glass before beginning installation using neutral cleaning solution.

- .2 Ensure no deleterious material adheres to glass by scraping surface of glass using industrial razors.
- .3 Ensure dust, grease, and chemical residue are removed from surface of glass before installation of film.
- .4 Examine glass under natural daylight and identify cracks, blisters, bubbles, discolouration, edge defects or other anomalies that may cause film to delaminate or cause vision transparency or distortion problems. Report findings to Departmental Representative.

### 3.2 INSTALLATION

- .1 Field Installation of Blockout and Translucent Film to Glass:
  - .1 Install film in accordance with manufacturer's written instructions.
  - .2 Ensure dust, grease, and chemical residue are removed from surface of glass before installation of film.
  - .3 Examine glass under natural daylight and identify cracks, blisters, bubbles, discolouration, edge defects or other anomalies that may cause film to delaminate, or cause vision transparency or distortion problems. Report findings to Departmental Representative before starting Work.
  - .4 Install security film to glass windows ensuring no blisters, bubbles, scratches or distortions.
- .2 Cut film edges straight and square.
- .3 Cut edges tight to edge of glass sealing device and in accordance with manufacturers written instructions.
- .4 Apply and attach film to glass in accordance with manufacturer's written instructions.
- .5 Splicing:
  - .1 Splice film only when glass is greater in width than film.
  - .2 Splice film only after receipt of written approval from Departmental Representative.
  - .3 Use butt factory edges only.

### 3.3 FINAL CLEANING

- .1 Wash interior and exterior of each glass panel and film using cleaning solution recommended by film manufacturer.

**END OF SECTION**

**PART 1 - GENERAL**

- 1.1 SECTION INCLUDES** .1 Portland Cement plaster repair work.
- 1.2 RELATED SECTIONS** .1 Section 06 10 11 – Rough Carpentry.  
.2 Section 09 91 23 – Interior Painting.
- 1.3 REFERENCES** .1 American Society for Testing and Materials (ASTM International)  
.1 ASTM C206-14, Specification for Finishing Hydrated Lime.  
.2 ASTM C150-15, Standard Specification for Portland Cement.  
.3 ASTM C207-06(2011), Standard Specification for Hydrated Lime for Masonry Purposes.  
.4 ASTM C897-15, Standard Specification for Aggregate for Job-Mixed Portland Cement-Based Plasters.  
.5 ASTM C926-16, Standard Specification for Application of Portland Cement-Based Plaster.  
.6 ASTM C1059-13, Standard Specification for Latex Agents for Bonding Fresh to Hardened Concrete.  
.7 ASTM C1583-13, Standard Test Method for Tensile Strength of Concrete Surfaces and the Bond Strength or Tensile Strength of Concrete Repair and Overlay Materials by Direct Tension (Pull-off Method).  
.2 Canadian Standards Association (CSA International)  
.1 CAN/CSA-A3000-98, Cementitious Materials Compendium.  
.3 CAN/CSA-A5-98, Portland Cement. CAN/CSA-A82.57-M1977 Inorganic aggregates for use in interior plaster.  
.4 Association of Wall and Ceiling Contractors (AWCC):  
.1 Association of Wall and Ceiling Contractors Specification Standards Manual”, 2003 Edition, Section 9.3 – Stucco (AWCC Manual).
- 1.4 QUALITY ASSURANCE** .1 Qualifications: Work to be undertaken by skilled personal with a minimum 5 years’ experience, references to be made available upon request.  
.2 Mock-up: construct mock-up in accordance with Section 00 10 00.  
.3 Before application of plaster, at location designated by Departmental Representative, prepare 1 m<sup>2</sup> representative sample plastering coat.

- .4 Allow 24 hours for inspection of mock-up by Departmental Representative before proceeding with plaster work.
- .5 When accepted, mock-up will demonstrate minimum standard of quality required for this work. Approved mock-up may remain as part of finished work.

**1.5 DELIVERY,  
STORAGE, AND  
HANDLING**

- .1 Deliver, store and handle in accordance with the provision of Section 00 10 00.
- .2 Ensure bagged materials are delivered to site and stored in original containers.
- .3 Ensure loose material is delivered, clean, and stored to prevent contamination by foreign material.
- .4 Protect material from damage by moisture and freezing.

**1.6 ENVIRONMENTAL  
REQUIREMENTS**

- .1 Do plaster work when ambient temperature is between 13° C and 21° C under conditions specified in ASTM C 842.
- .2 Ventilate to facilitate proper application and curing of plaster.

**PART 2 - PRODUCTS**

**2.1 MATERIALS**

- .1 Metal Lath: Use galvanized, metal lath to ASTM C 841 of type and weight to suit plaster system and support spacing.
- .2 Hydrated Lime: to ASTM C 206.
- .3 Cement: to CAN/CSA-A3000.
- .4 Portland Cement: to CAN/CSA-A3000.
- .5 Bonding Adhesive: to ASTM C1059.
- .6 Sand: to ASTM C 35. Clean, sharp, free from deleterious matter.
- .7 Water: potable, free of substances that would affect set of plaster.

**2.2 MIXES**

- .1 Mix plaster in accordance with CAN/CSA-A82.57-M1977.
- .2 Accurately maintain measuring proportions from batch to batch.
- .3 Have materials batch mixed.

- .4 Keep mixing tools and bins free of hardened residue.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- .1 Examine existing plaster surfaces and methods of reproducing finish.

#### **3.2 PROTECTION**

- .1 Protect any fittings and surfaces adjacent to work by covering or masking.

#### **3.3 PREPARATION**

- 1 Ensure that all existing wall surfaces are sound and solid before beginning repairs. Remove loose, unsound or flaking plaster on walls at windows which has been damaged by water or as a result of construction.
  - .2 Install wire lath in large holes as required.
  - .3 Before repairing, coat all existing plaster surfaces with "Plaster-Weld" by Larsen Products Corp or "Plaster Bonder" by United States Gypsum Co to prevent re-hydration of plaster.
  - .4 Fill all depressions and cracks as noted above to obtain a suitable base for new finishes. Completed installation to be smooth, level or plumb, free from waves and other defects.
  - .5 Do not repair plaster until adjacent finished work has been masked or protected from damage in a suitable manner.
  - .6 Ensure ground, screeds, beads and accessories are in place and conduits, pipes, cables and outlets are properly plugged, capped or covered before commencing work.
  - .7 Where plaster butts exposed masonry walls, insert 1 m (3'-3") wide strip of polyethylene before applying plaster to protect masonry. Cut polyethylene neatly at junction with plaster when plastering completed.
  - .8 Apply adhesives to bond new plaster with existing.

#### **3.4 INSTALLATION**

- .1 Repair of metal lath.
  - .1 Remove and replace lath, as required, with new metal lath.
- .2 Use bonding agents on masonry.

- 3.5 APPLICATION**
- .1 Ensure that plaster finish follows surface irregularities to maintain authenticity of original work.
  - .2 Do plaster work to ASTM C 842, unless otherwise specified.
  - .3 Base Coat:
    - .1 Apply first coat, with trowel, using sufficient pressure to force it between gaps of lath. Ensure even surface.
    - .2 Scratch surface with broom when initial set is obtained (2-4 days).
    - .3 Keep base coat damp for 3 days.
    - .4 Cure base coat 10 days in ventilated surroundings.
  - .4 Intermediate scratch coat:
    - .1 Wet base coat 2 hours before application of scratch coat.
    - .2 Apply scratch coat.
    - .3 Keep scratch coat damp for 2 days.
    - .4 Cure 6 days.
  - .5 Finish coat:
    - .1 Wet intermediate coat thoroughly.
    - .2 Apply finish coat to 3 mm thickness minimum.
    - .3 Smooth finish coat with wood trowel to achieve desired texture and appearance.
    - .4 Trowel patch work to smooth surface, even with adjacent work.
- 3.6 CLEANING**
- .1 Remove droppings and splashings, immediately, using clean sponge and water.
- 3.7 PROTECTION**
- .1 Protect finished adjoining work, during execution of plaster work, with polyethelene sheets or building paper.
  - .2 Remove surplus material, tools, equipment and debris from work area on completion of work.

**END OF SECTION**

**PART 1 - GENERAL**

**1,1 RELATED SECTIONS**

- .1 Section 06 10 00 – Rough Carpentry.
- .2 Section 08 11 00 – Metal Doors and Frames
- .3 Section 09 03 51 – Historic – Plaster
- .4 Section 09 22 16 – Non-Structural Metal Framing
- .5 Section 09 30 13 – Ceramic Tiling

- .4 Underwriters' Laboratories of Canada (ULC)
  - .1 CAN/ULC-S102-1988 R2000, Surface Burning Characteristics of Building Materials and Assemblies.

**1.3 DELIVERY,  
STORAGE AND  
HANDLING**

- .1 Deliver materials in original packages, containers or bundles bearing manufacturers brand name and identification.
- .2 Store materials inside, level, under cover. Keep dry. Protect from weather, other elements and damage from construction operations and other causes.
- .3 Handle gypsum boards to prevent damage to edges, ends or surfaces. Protect metal accessories and trim from being bent or damaged.

**1.4 SITE  
ENVIRONMENTAL  
REQUIREMENTS**

- .1 Maintain temperature minimum 10 degrees C, maximum 21 degrees C for 48 hours prior to and during application of gypsum boards and joint treatment, and for at least 48 hours after completion of joint treatment.
- .2 Apply board and joint treatment to dry, frost free surfaces.
- .3 Ventilation: Ventilate building spaces as required to remove excess moisture that would prevent drying of joint treatment material immediately after its application.

**1.5 SAMPLES**

- .1 Submit samples in accordance with Section 00 10 00.

**PART 2 - PRODUCTS**

**2.1 MATERIALS**

- .1 Standard board: to ASTM C 36/C36M regular, Type X, 16 mm thick, 1200 mm wide x maximum practical length, ends square cut, edges squared.
- .2 Glass-mat Moisture Resistant Board:  
To ASTM D3273, ASTM C1658, and ASTM C1177, 16 mm thick, 1200 mm wide x maximum practical length, ends square cut, edges squared.
- .3 Cement Backer Board:  
To ASTM C473, ASTM D3273 and ASTM C627, 16 mm thick, 1200 mm wide x maximum practical length, edges squared.
- .4 Insulating strip: rubberized, moisture resistant, closed cell neoprene strip, 50 mm wide.

- .5 Casing beads, corner beads, control joints and "J-Trim" edge trim: to ASTM C 1047, zinc-coated zinc-coated by electrolytic process, 0.5 mm base thickness, perforated flanges, one piece length per location.
- .6 Joint compound: to ASTM C 475, asbestos-free and as recommended by manufacturer.
- .7 Tape: as recommended by manufacturer.

### **PART 3 - EXECUTION**

#### **3.1 ERECTION**

- .1 Do application and finishing of gypsum board in accordance with ASTM C 840 except where specified otherwise.
- .2 Do application of gypsum sheathing in accordance with ASTM C 1280.
- .3 Erect hangers and runner channels for suspended gypsum board ceilings in accordance with ASTM C 840 except where specified otherwise.
- .4 Support light fixtures by providing additional ceiling suspension hangers within 150 mm of each corner and at maximum 600 mm around perimeter of fixture.
- .5 Install work level to tolerance of 1:1200.
- .6 Frame with furring channels, perimeter of openings for access panels, light fixtures, diffusers, grilles.
- .7 Install 19 x 64 mm furring channels parallel to, and at exact locations of steel stud partition header track.
- .8 Furr for gypsum board faced vertical bulkheads within and at termination of ceilings.
- .9 Furr above suspended ceilings for gypsum board fire and sound stops and to form plenum areas as indicated.
- .10 Install wall furring for gypsum board wall finishes in accordance with ASTM C 840, except where specified otherwise.
- .11 Furr openings and around built-in equipment, cabinets, access panels, on four sides. Extend furring into reveals. Check clearances with equipment suppliers.
- .12 Furr duct shafts, beams, columns, pipes and exposed services where indicated.
- .13 Install 150 mm continuous strip of 12.7 mm gypsum board along base of partitions where resilient furring installed.

### 3.2 APPLICATION

- .1 Do not apply gypsum board until bucks, anchors, blocking, sound attenuation, electrical and mechanical work are approved.
- .2 Apply single layer gypsum board to metal furring or framing using screw fasteners. Maximum spacing of screws 300 mm on centre.
- .3 Apply single layer gypsum board to concrete or terracotta block surfaces, where indicated, using screw fasteners.
- .4 Install gypsum board with face side out.
- .5 Do not install damaged or damp boards.

### 3.3 INSTALLATION

- .1 Erect accessories straight, plumb or level, rigid and at proper plane. Use full length pieces where practical. Make joints tight, accurately aligned and rigidly secured. Mitre and fit corners accurately, free from rough edges. Secure at 150 mm on centre.
- .2 Install casing beads around perimeter of suspended ceilings.
- .3 Install casing beads where gypsum board butts against surfaces having no trim concealing junction and where indicated.
- .4 Install insulating strips continuously at edges of gypsum board and casing beads abutting metal window and exterior door frames, to provide thermal break.
- .5 Install access doors to electrical and mechanical fixtures specified in respective sections.
  - .1 Rigidly secure frames to furring or framing systems.
- .6 Finish face panel joints and internal angles with joint system consisting of joint compound, joint tape and taping compound installed according to manufacturer's directions and feathered out onto panel faces.
- .7 Gypsum Board Finish: finish gypsum board walls and ceilings to following levels in accordance with Association of the Wall and Ceiling Industries (AWCI) International Recommended Specification on Levels of Gypsum Board Finish:
  - .1 Level 5: Embed tape for joints and interior angles in joint compound and apply three separate coats of joint compound over joints, angles, fastener heads and accessories; apply a thin skim coat of joint compound to entire surface; surfaces smooth and free of tool marks and ridges.
- .8 Finish corner beads, control joints and trim as required with two coats of joint compound and one coat of taping compound, feathered out onto panel faces.

- .9 Fill screw head depressions with joint and taping compounds to bring flush with adjacent surface of gypsum board so as to be invisible after surface finish is completed.
- .10 Sand lightly to remove burred edges and other imperfections. Avoid sanding adjacent surface of board.
- .11 Completed installation to be smooth, level or plumb, free from waves and other defects and ready for surface finish.
- .12 Apply one coat of white primer sealer over surface to be textured. When dry apply textured finish in accordance with manufacturer's instructions.
- .13 Mix joint compound slightly thinner than for joint taping.
- .14 Apply thin coat to entire surface using trowel or drywall broadknife to fill surface texture differences, variations or tool marks.
- .15 Allow skim coat to dry completely.
- .16 Remove ridges by light sanding or wiping with damp cloth.
- .17 Provide protection that ensures gypsum drywall work will remain without damage or deterioration at time of substantial completion.

**END OF SECTION**

## PART 1 - GENERAL

### 1.1 RELATED SECTIONS

- .1 Section 06 10 100 – Rough Carpentry.
- .2 Section 09 21 16 - Gypsum Board Assemblies.

### 1.2 REFERENCES

- .1 American Society for Testing and Materials International, (ASTM).
  - .1 ASTM C 645-07, Specification for Nonstructural Steel Framing Members.
  - .2 ASTM C 754-15, Specification for Installation of Steel Framing Members to Receive Screw-Attached Gypsum Panel Products.
- .2 Canadian General Standards Board (CGSB).
  - .1 CAN/CGSB-1.40-97, Primer, Structural Steel, Oil Alkyd Type.

### 1.3 QUALITY ASSURANCE

- .1 Test Reports: certified test reports showing compliance with specified performance characteristics and physical properties.

## PART 2 - PRODUCTS

### 2.1 MATERIALS

- .1 Non-load bearing channel stud framing: to ASTM C 645, 64 mm, 92 mm, 152 mm stud size, roll formed from 0.91 mm (20 gauge) thickness hot dipped galvanized steel sheet, for screw attachment of gypsum board. Knock-out service holes at 460 mm centres.
- .2 Floor and ceiling tracks: to ASTM C 645, in widths to suit stud sizes, 32 mm flange height.
- .3 Metal channel stiffener: 1.4 mm thick cold rolled steel, coated with rust inhibitive coating.
- .4 Insulating strip: rubberized, moisture resistant 3 mm thick lengths as required.

## PART 3 - EXECUTION

### 3.1 ERECTION

- .1 Align partition tracks at floor and ceiling and secure at 300 mm on centre maximum.

- .2 Install damp proof course under stud shoe tracks of partitions on slabs on grade.
- .3 Place studs vertically at 355 mm (14") on centre and not more than 50 mm from abutting walls, and at each side of openings and corners. Position studs in tracks at floor and ceiling. Cross brace steel studs as required to provide rigid installation to manufacturer's instructions.
- .4 Erect metal studding to tolerance of 1:1000.
- .5 Attach studs to bottom and ceiling track using screws.
- .6 Co-ordinate simultaneous erection of studs with installation of service lines. When erecting studs ensure web openings are aligned.
- .7 Co-ordinate erection of studs with installation of door/window frames and special supports or anchorage for work specified in other Sections.
- .8 Provide two studs extending from floor to ceiling at each side of openings wider than stud centres specified. Secure studs together, 50 mm apart using column clips or other approved means of fastening placed alongside frame anchor clips.
- .9 Install heavy gauge single jamb studs at openings.
- .10 Erect track at head of door/window openings and sills of sidelight/window openings to accommodate intermediate studs. Secure track to studs at each end, in accordance with manufacturer's instructions. Install intermediate studs above and below openings in same manner and spacing as wall studs.
- .11 Frame openings and around built-in equipment, cabinets, access panels, on four sides. Extend framing into reveals. Check clearances with equipment suppliers.
- .12 Provide 40 mm stud or furring channel secured between studs for attachment of fixtures behind lavatory basins, toilet and bathroom accessories, and other fixtures including grab bars and towel rails, attached to steel stud partitions.
- .13 Install steel studs or furring channel between studs for attaching electrical and other boxes.
- .14 Extend partitions to ceiling height except where noted otherwise on drawings.
- .15 Maintain clearance under beams and structural slabs to avoid transmission of structural loads to studs. Use 50 mm leg ceiling tracks.
- .16 Install continuous insulating strips to isolate studs from uninsulated surfaces.

**3.2 CLEANING**

- .1 Upon completion of installation, remove surplus materials, rubbish, tools and equipment barriers.

- .5 Terrazzo Tile and Marble Association of Canada (TTMAC)
  - .1 Tile Specification Guide 093000, Tile Installation Manual.
  - .2 Tile Maintenance Guide.

**1.3 PRODUCT DATA**

- .1 Submit product data in accordance with Section 00 10 00 - Submittal Procedures.
- .2 Include manufacturer's information on:
  - .1 Ceramic tile, marked to show each type, size, and shape required.
  - .2 Chemical resistant mortar and epoxy grout.
  - .3 Transition strip.
  - .4 Flexible membrane.

- .5 Leveling compound.
- .6 Adhesives.

**1.4 SAMPLES**

- .1 Submit samples in accordance with Section 00 10 00 - Submittal Procedures.
- .2 Wall tile: submit duplicate sample panels of each colour, size.
- .3 Floor tile: submit duplicate sample panels of each colour.
- .4 Transition and reducer strips: each type and profile.

**1.5 DELIVERY,  
STORAGE AND  
HANDLING**

- .1 Deliver materials in containers with labels legible and intact and grade-seals unbroken.
- .2 Store material so as to prevent damage or contamination.
- .3 Store materials in a dry area, protected from freezing, staining and damage.
- .4 Store cementitious materials on a dry surface.

**1.6 ENVIRONMENTAL  
CONDITIONS**

- .1 Maintain air temperature and structural base temperature at ceramic tile installation area above 12 ° C for 48 h before, during, and 48 h after, installation.
- .2 Do not install tiles at temperatures less than 12 ° C or above 38 ° C.
- .3 Do not apply epoxy mortar and grouts at temperatures below 15 ° C or above 25 ° C.

**1.7 EXTRA MATERIAL**

- .1 Provide maintenance materials in accordance with Section 00 10 00.
- .2 Provide minimum 2% of each type and colour of tile required for project for maintenance use. Store where directed.
- .3 Maintenance material to be of same production run as installed material.

**PART 2 - PRODUCTS**

**2.1 FLOOR TILE**

- .1 Ceramic mosaic tile: to CAN/CGSB-75.1, Type 2, Class MR 1, 50 x 50 mm size, slip resistant surface, Matching covered base, 150 mm high.

- .2 Acceptable Material:
  - .1 CMT-1: Olympia Quebec Series / "Anthracite" Unglazed.
  
- 2.2 WALL TILE**
  - .1 Ceramic tile: to CAN/CGSB-75.1, Type 5, Class MR 1, matt glazed surface.
  - .2 Acceptable Material:
    - .1 CT-1: By Olympia Ontario Series "Snow White Matte"  
Size: 50 x 50 mm.
    - .2 CT-2: By Olympia Yura New Series – Lead Grey, Size: 300 x 600 mm.
  
- 2.3 THIN SET MORTAR AND ADDITIVES**
  - .1 Acceptable Material:
    - .1 Thin-Set Mortar:
      - .1 Flextile 51 as manufactured by Flextile Ltd.
    - .2 Additive:
      - .1 Flextile 44 as manufactured by Flextile Ltd.
  - .2 Water: potable and free of minerals and chemicals which are detrimental to mortar and grout mixes.
  
- 2.4 BOND COAT**
  - .1 Latex Portland Cement mortar: to ANSI A108.1, two-component universal dry-set mortar.
  
- 2.5 WATERPROOFING SYSTEM**
  - .1 Flexible, load-bearing waterproofing system which consists of an elastomeric latex compound with a reinforcing fabric.
  - .2 Acceptable Material:
    - .1 Flextile WP-980 as manufactured by Flextile Ltd.
  
- 2.6 GROUT**
  - .1 Chemical-Resistant Grout:
    - .1 Epoxy grout: to ANSI A108.1, having quality, colour and characteristics to match epoxy bond coat. Adhesive and grout by same manufacturer.
    - .2 Colour: Silver Grey.
    - .3 Acceptable Material:
      - .1 Two component flex-epoxy 100 as manufactured by Flextile Ltd.

**2.7 ACCESSORIES**

- .1 Transition and Reducer Strips: purpose made metal anodized aluminum type.
  - .1 At wall or floor tile termination or transition between dissimilar finishes use anodized aluminum profiles manufactured by Schluter Systems Inc.
    - .1 Floor transition between dissimilar materials: Schluter – Schiene.
    - .2 Wall outside corner: Schluter – Quadec.
    - .3 Wall termination: Schluter – Jolly.
    - .4 Floor transition between dissimilar materials – Schluter – Reno-TK.
    - .5 Floor expansion/control joint: Schluter – Dilex – BWS.
    - .6 Top of ceramic tile base: Schluter – Jolly.
- .2 Sealant: in accordance with Section 07 92 10 - Joint Sealing.
- .3 Thresholds: marble, 16 mm thick, bevelled one side, honed finish to exposed surfaces, 100 mm wide as indicated.

**2.8 MIXES**

- .1 Portland Cement:
  - .1 Scratch coat: 1 part portland cement, 1/5 to 1/2 parts hydrated lime to suit job conditions, 4 parts sand, 1 part water, [and latex additive where required]. Adjust water volume depending on water content of sand.
  - .2 Slurry bond coat: portland cement and water mixed to creamy paste. Latex additive may be included.
  - .3 Mortar bed for floors: 1 part portland cement, 4 parts sand, 1 part water. Adjust water volume depending on water content of sand. Include Latex additive.
  - .4 Mortar bed for walls: 1 part portland cement, 1/5 to 1/2 parts hydrated lime to suit job conditions, 4 parts sand and 1 part water. Adjust water volume depending on water content of sand. Include Latex additive.
  - .5 Levelling coat: 1 part portland cement, 4 parts sand, minimum 1/10 part latex additive, 1 part water including latex additive.
  - .6 Bond or setting coat: 1 part portland cement, 1/3 part hydrated lime, 1 part water.
  - .7 Measure mortar ingredients by volume.
- .2 Dry set mortar: mix to manufacturer's instructions.
- .3 Organic adhesive: pre-mixed.
- .4 Mix bond and levelling coats, and grout to manufacturer's instructions.
- .5 Adjust water volumes to suit water content of sand.

**2.9 PATCHING AND LEVELING COMPOUND**

- .1 Polymer modified, cementitious self-levelling underlayment, manufactured specifically for resurfacing and leveling concrete floors. Products containing gypsum are not acceptable.
- .2 Have not less than the following physical properties:

- .1 Compressive strength – 33.1 MPa (@ 28 days).
- .2 Density - 1.9 (Wet).
- .3 Capable of being applied in layers up to 50 mm thick, being brought to feather edge, and being trowelled to smooth finish.
- .4 Ready for use in 4 hours after application.
- .5 Acceptable Material:
  - .1 59 Flex-Flo self-levelling underlayment as manufactured by Flextile Ltd.
  - .2 Primer: Flextile 4040 as manufactured by Flextile Ltd.

**2.10 CLEANING  
COMPOUNDS**

- .1 Specifically designed for cleaning masonry and concrete and which will not prevent bond of subsequent tile setting materials including patching and leveling compounds and elastomeric waterproofing membrane and coat.
- .2 Materials containing acid or caustic material are not acceptable.

**PART 3 - EXECUTION**

**3.1 WORKMANSHIP**

- .1 Do tile work in accordance with TTMAC Tile Installation Manual, "Ceramic Tile", except where specified otherwise.
- .2 Apply tile to clean and sound surfaces.
- .3 Fit tile around corners, fitments, fixtures, drains and other built-in objects. Maintain uniform joint appearance. Cut edges smooth and even. Do not split tiles.
- .4 Maximum surface tolerance 1:800.
- .5 Make joints between tile uniform and approximately 1.5 mm wide, plumb, straight, true, even and flush with adjacent tile. Ensure sheet layout not visible after installation. Align patterns.
- .6 Lay out tiles so perimeter tiles are minimum 1/2 size.
- .7 Sound tiles after setting and replace hollow-sounding units to obtain full bond.
- .8 Make internal angles square.
- .9 Use transition strip at termination of wall tile panels.
- .10 Install transition or reducer strips at junction of tile flooring and dissimilar materials.

- .11 Allow minimum 24 h after installation of tiles, before grouting.
- .12 Clean installed tile surfaces after installation and grouting cured.
- .13 Install waterproofing system under floor tiles and on walls up to 300 mm above top of floor.
- .14 Install self-levelling underlayment under floor tiles.

### 3.2 WALL TILE

- .1 In shower stalls and as indicated install CT-1 tiles in full height of all shower walls and to underside of ceiling.
- .2 In washrooms as indicated, install CT-2 tiles Wainscot up to 1100 mm above finish floor and full height of walls and to underside of ceiling at urinals and where indicated.

### 3.3 FLOOR TILES

- .1 Install mosaic floor tiles type CMT-1 in all shower rooms.

**1.3 SUBMITTALS**

- .1 Submit samples in accordance with Section 00 10 00.
- .2 Submit duplicate 6" x 6" samples of each type acoustical units.

**1.4 DELIVERY, STORAGE AND HANDLING**

- .1 Protect on site stored or installed absorptive material from moisture damage.
- .2 Store extra materials required for maintenance, where directed by Departmental Representative.

**1.5 ENVIRONMENTAL REQUIREMENTS**

- .1 Permit wet work to dry before beginning to install.
- .2 Maintain uniform minimum temperature of 15 degrees C and humidity of 20 - 40 % before and during installation.
- .3 Store materials in work area 48 hours prior to installation.

**1.6 EXTRA MATERIALS**

- .1 Provide extra materials of acoustic units in accordance with Section 00 10 00.
- .2 Provide acoustical units amounting to 4% of gross ceiling area for each pattern and type required for project.
- .3 Ensure extra materials are from same production run as installed materials.
- .4 Clearly identify each type of acoustic unit, including colour and texture.
- .5 Deliver to Departmental Representative, upon completion of the work of this section.

**PART 2 - PRODUCTS**

**2.1 MATERIALS**

- .1 Acoustic units for suspended ceiling system]: to CAN/CGSB-92.1, ASTM E 1264.
  - .1 Type XX.
  - .2 Class A.
  - .3 Wet formed ceramic and mineral fiber composite.
  - .4 Pattern CE, Class A.
  - .5 Textures: fine fissured.
  - .6 Flame spread rating of 25 or less in accordance with CAN/ULC-S102.
  - .7 Smoke developed 50 or less in accordance with CAN/ULC-S102.
  - .8 Noise Reduction Coefficient (NRC) designation of 0.55.
  - .9 Ceiling Attenuation Class (CAC) rating 40, in accordance with ASTM E 1264
  - .10 Light Reflectance (LR) range of 0.82 to ASTM E 1477.
  - .11 Edge type square edge.
  - .13 Colour white.
  - .14 Size 610 mm x 1220 mm x 16 mm thick.
  - .15 Shape flat.
  - .16 Sag resistant.
  - .17 Anti-mold and mildew.
  - .18 Acceptable Material:
    - .1 Ceramaguard – Fine Fissured by Armstrong.

**PART 3 - EXECUTION**

- 3.1 EXAMINATION** .1 Do not install acoustical panels and tiles until work above ceiling has been inspected by Departmental Representative.
- 3.2 INSTALLATION** .1 Install acoustical panels and tiles in ceiling suspension system.
- 3.3 INTERFACE WITH OTHER WORK** .1 Co-ordinate ceiling work to accommodate components of other sections, such as light fixtures, diffusers, speakers, sprinkler heads, to be built into acoustical ceiling components.
- 3.4 EXISTING CEILINGS** .1 Where existing ceilings are affected by new work, remove ceilings as required and reinstall using undamaged existing components. Replace damaged components with new matching components.

**END OF SECTION**

**PART 1 - GENERAL**

- 1.1 RELATED SECTIONS** .1 Section 09 51 13 - Acoustical Ceilings: Acoustical units.
- 1.2 REFERENCES** .1 American Society for Testing and Materials (ASTM International)  
.1 ASTM C 635-07, Specifications for the Manufacture, Performance and Testing of Metal Suspension Systems for Acoustical Tile and Lay-In Panel Ceilings.  
.2 ASTM C 636-13, Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels.
- 1.3 DESIGN REQUIREMENTS** .1 Maximum deflection: 1/360th of span to ASTM C 635 deflection test.
- 1.4 SHOP DRAWINGS** .1 Submit shop drawings in accordance with Section 00 10 00.

**PART 2 - PRODUCTS**

- 2.1 MATERIALS** .1 Intermediate duty system to ASTM C 635.
- .2 Basic materials for suspension system: commercial quality cold rolled steel zinc coated.
- .3 Suspension system: non fire rated, made up as follows:  
.1 two directional exposed tee bar grid.  
.1 Acceptable material:  
.1 Bailey Metal Products Ltd.: Exposed two directional Tee Grid System.  
.2 Donn DX, Suspension System by CGC Inc.  
.3 Prelude XL, Exposed Tee System by Armstrong.
- .4 Exposed tee bar grid components: shop painted satin sheen white. Components die cut. Main tee with double web, rectangular bulb and 25 mm rolled cap on exposed face. Cross tee with rectangular bulb; web extended to form positive interlock with main tee webs; lower flange extended and offset to provide flush intersection.
- .5 Hanger wire: galvanized soft annealed steel wire.  
.1 3.6 mm diameter for access tile ceilings.  
.2 to ULC design requirements for fire rated assemblies.  
.3 2.6 mm diameter for [other] ceilings.

- .6 Hanger inserts: purpose made.
- .7 Accessories: splices, clips, wire ties, retainers and wall moulding flush, to complement suspension system components, as recommended by system manufacturer.

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION**

- .1 Installation: in accordance with ASTM C 636 except where specified otherwise.
- .2 Install suspension system to manufacturer's instructions and Certification Organizations tested design requirements.
- .3 Do not erect ceiling suspension system until work above ceiling has been inspected by Departmental Representative.
- .4 Install hangers spaced at maximum 1200 mm centres and within 150 mm from ends of main tees.
- .5 Lay out system according to reflected ceiling plan.
- .6 Ensure suspension system is co-ordinated with location of related components.
- .7 Install wall moulding to provide correct ceiling height.
- .8 Completed suspension system to support super-imposed loads, such as lighting fixtures, diffusers, grilles, and speakers.
- .9 Support at light fixtures, diffusers with additional ceiling suspension hangers within 150 mm of each corner and at maximum 600 mm around perimeter of fixture.
- .10 Interlock cross member to main runner to provide rigid assembly.
- .11 Frame at openings for light fixtures, air diffusers, speakers and at changes in ceiling heights.
- .12 Finished ceiling system to be square with adjoining walls and level within 1:1000.

#### **3.2 CLEANING**

- .1 Touch up scratches, abrasions, voids and other defects in painted surfaces.

**END OF SECTION**

**PART 1 - GENERAL**

**1.1 RELATED SECTIONS**

- .1 Section 00 10 00 - Submittal Procedures.
- .2 Section 05 50 00 – Metal Fabrication.
- .3 Section 09 65 19 – Resilient Tile Flooring.

**1.2 REFERENCES**

- .1 American Society for Testing and Materials (ASTM International)
  - .1 ASTM F 1913 Standard Specification for Vinyl Sheet Floor Covering Without Backing.
  - .2 ASTM D 2047, Standard Test Method for State Coefficient of Friction of Polish-Coated Flooring of 0.6 or greater.
  - .3 ASTM F 970, Standard Test Method for Static Load Limit – 250 PSI.
  - .4 ASTM E 648, Standard Test Method for Critical Radiant Flux of 0.45 watts/cm<sup>2</sup> or greater, Class I.
- .2 Canadian Standards Association (CSA International)
  - .1 CAN/CSA-ISO 14040-06(r2011), Environmental Management - Life Cycle Assessment - Principles and Framework.

**1.3 SAMPLES**

- .1 Submit samples in accordance with Section 00 10 00 - Submittal Procedures.
- .2 Submit duplicate 300 x 300 mm sample pieces of sheet material, 300 mm long base, edge strips.

**1.4 CLOSEOUT SUBMITTALS**

- .1 Provide maintenance data for resilient flooring for incorporation into manual specified in Section 00 10 00.

**1.5 EXTRA MATERIALS**

- .1 Provide extra materials of resilient sheet flooring and adhesives in accordance with Section 00 10 00 Closeout Submittals.
- .2 Provide 1 m<sup>2</sup> of each colour, pattern and type flooring material required for project for maintenance use.
- .3 Extra materials to be in one piece and from same production run as installed materials.
- .4 Clearly identify each roll of sheet flooring and each container of adhesive.

- .5 Deliver to Departmental Representative, upon completion of the work of this section.
- .6 Store where directed by Departmental Representative.

#### 1.6 ENVIRONMENTAL REQUIREMENTS

- .1 Maintain air temperature and structural base temperature at flooring installation area above 20° for 48 hours before, during and 48 hours after installation.

### PART 2 - PRODUCTS

#### 2.1 MATERIALS

- .1 Resilient Homogeneous Vinyl Sheet Flooring: to ASTM F 1913, without backing.
  - .1 Colour: #864 – Concrete Slab.
  - .2 Thickness: 2 mm.
  - .3 Acceptable material: Optima as manufactured by Johnsonite Inc.
- .2 Resilient stair tread and one piece stair tread/riser: rubber, 30 mm vertical face, round nose, full tread deep, full tread width, 3 mm thick, raised round pattern, surface with carborundum strips, colour selected by Departmental Representative.
- .3 Primers and adhesives: of types recommended by resilient flooring manufacturer for specific material on applicable substrate.
  - .1 Adhesive
    - .1 Acceptable Material: Johnsonite #975 Two-Part Urethane Adhesive.
- .4 Sub-floor filler and leveller: Latex modified Portland Cement based.
- .5 Metal edge strips:
  - .1 Aluminum extruded, smooth, mill finish with lip to extend under floor finish.
- .6 External corner protectors: type recommended by flooring manufacturer.
- .7 Edging to floor penetrations: aluminum, type recommended by flooring manufacturer.
- .8 Cove Base Filler Strip:
  - .1 Acceptable Material: CFS-00-A Cove Filler Strip as manufactured by Johnsonite Inc.
- .9 Transition and reducer trims, vinyl, colour to match sheet flooring, size and shape purpose-made. Acceptable Manufacturer: Bengard.

- .10 Sealer and wax: type recommended by resilient flooring material manufacturer for material type and location.

**PART 3 - EXECUTION**

**3.1 SITE  
VERIFICATION OF  
CONDITIONS**

- .1 Ensure concrete floors are clean and dry by using test methods recommended by flooring manufacturer.

**3.2 PREPARATION**

- .1 Remove sub-floor ridges and bumps. Fill low spots, cracks, joints, holes and other defects with sub-floor filler.
- .2 Clean floor and apply filler; trowel and float to leave smooth, flat hard surface. Prohibit traffic until filler cured and dry.
- .3 Prime sub-floor to resilient flooring manufacturer's printed instructions.
- .4 Prepare Substrates according to ASTM F 710 including the following:
  - .1 Moisture Testing: Perform tests recommended by manufacturer. Proceed with installation only after substrates pass testing.
    - .1 Perform anhydrous calcium chloride test, ASTM F 1869. Results must not exceed 5 lbs. Moisture Vapour Emission Rate per 1,000 sq. ft. in 24 hours.
    - or-
    - .2 Perform relative humidity test using in situ probes, ASTM F 2170. Must not exceed 80%.
  - .2 A pH test for alkalinity must be conducted. Results should range between 7 and 9. If the test results are not within the acceptable range of 7 to 9, the installation must not proceed until the problem has been corrected.
  - .3 Alkalinity and Adhesion Testing: Perform tests recommended by manufacturer.

**3.3 APPLICATION:  
FLOORING**

- .1 Provide a high ventilation rate, with maximum outside air, during installation, and for 48 to 72 hours after installation. If possible, vent directly to the outside. Do not let contaminated air recirculate through a district or whole building air distribution system.
- .2 Apply adhesive uniformly using recommended trowel. Do not spread more adhesive than can be covered by flooring before initial set takes place.
- .3 Lay flooring with seams parallel to building lines to produce a minimum number of seams. Border widths minimum 1/3 width of full material.

- .4 Run sheets in direction of traffic. Double cut sheet joints and continuously heat weld according to manufacturer's printed instructions.
- .5 As installation progresses, and after installation roll flooring with 45 kg minimum roller to ensure full adhesion.
- .6 Cut flooring neatly around fixed objects.
- .7 Terminate flooring at centreline of door in openings where adjacent floor finish.
- .8 Install metal edge strips at top of cove base and vinyl transition or reducer trim at exposed edges where flooring terminates.

**3.4 APPLICATION:  
STAIRS**

- .1 Install stair treads and risers one piece for full width of stair. Adhere over entire surface and fit accurately.

**3.5 APPLICATION:  
BASE**

- .1 Cove Base: 200 mm high.
- .2 Lay out base to keep number of joints at minimum.
- .3 Clean substrate and prime with one coat of adhesive.
- .4 Apply adhesive to back of base.
- .5 Set base against wall and floor surfaces tightly by using 3 kg hand roller.
- .6 Install straight and level to variation of 1:1000.
- .7 Scribe and fit to door frames and other obstructions. Use premoulded end pieces at flush door frames.
- .8 Cope internal corners. Use premoulded corner units for right angle external corners. Use formed straight base material for external corners of other angles.
- .9 Use cove type base.
- .10 Heat weld base in accordance with manufacturer's printed instructions.

**3.6 CLEANING**

- .1 Remove excess adhesive from floor, base and wall surfaces without damage.
- .2 Clean, seal and wax floor and base surface to flooring manufacturer's printed instructions.

**3.7 PROTECTION**

- .1 Protect new floors from time of final set of adhesive.
- .2 Prohibit traffic on floor for 48 hours after installation.

**END OF SECTION**

**PART 1 - GENERAL**

**1.1 RELATED SECTIONS**

- .1 Section 00 10 00 - Submittal Procedures.
- .2 Section 05 50 00 – Metal Fabrication.
- .3 Section 09 65 19 – Resilient Tile Flooring.

**1.2 EXAMINATION**

- . .1 Examine surfaces on which rubber flooring and base are to be installed and ensure that they are flush, level, dry, and free from deleterious substances. Commencement of work implies full acceptance of responsibility for the appearance and function of floor and base finishes. Report to the Architect any defects which may affect the work.
- .2 Immediately prior to installation of flooring, test concrete slab for excessive moisture content by a method acceptable to the flooring manufacturer.

**1.3 SAMPLES**

- .1 Submit samples in accordance with Section 00 10 00 - Submittal Procedures.
- .2 Submit duplicate 300 x 300 mm sample pieces of sheet material, 300 mm long base, edge strips.

**1.4 CLOSEOUT SUBMITTALS**

- .1 Provide maintenance data for resilient tile flooring for incorporation into manual specified in Section 00 10 00.

**1.5 ENVIRONMENTAL REQUIREMENTS**

- . 1 Maintain air temperature and structural base temperature at flooring installation area above 20°C for 72 hours before, during and for 48 hours after installation.

**1.6 MAINTENANCE**

- .1 Deposit with the Architect all instructions for maintenance.

**1.7 WARRANTY**

- .1 Installation and material shall be warranted for a period of five (5) years from the date of Substantial Performance.
- .2 The warranty shall be supplied in writing and shall be made jointly and severally with the flooring installer and the manufacturer.

- .3 Repair and/or replace whenever directed by the Architect, within the guarantee period indicated above, any and all defects occurring in the work.

## PART 2 - PRODUCTS

### 2.1 MATERIALS

- .1 Surface Applied Tactile Walking Surface Indicators
  - .1 Quality Assurance
    - .1 Provide Surface Applied TWSI tiles and accessories as produced by a single manufacturer with a minimum of three (3) years' experience in the manufacturing of Surface Applied TWSI tiles.
    - .2 Installer's Qualifications: Engage an experienced installer certified in writing by Surface Applied TWSI tile manufacturer as qualified for installation, who has successfully completed installations similar in material, design, and extent to that indicated for the project.
    - .3 Provide Surface Applied TWSI tiles which are in compliance with the following standards (or most recent):
      - .1 ISO 23599:2012(E): Assistive Products for Blind and Vision Impaired Persons – Tactile Walking Surface Indicators.
      - .2 CSA B651-12: Accessible Design for the Built Environment Standard
      - .3 Integrated Accessibility Standards Regulation 191/11 – Sections 80.25 to 80.29
    - .4 Vitrified Polymer Composite (VPC) Surface Applied TWSI tiles shall be an epoxy polymer composition with a ultra-violet coating employing aluminum oxide particles in the truncated domes; "Armor Tile" as distributed under license by Kinesik Engineered Products (855-364-7763), or approved equal.
    - .5 Dimensions: The tile shall incorporate an in-line pattern of truncated domes measuring nominal 5mm height, 23mm base diameter, 12mm top diameter spaced center-to-center 61mm as measured on a diagonal and 42mm as measured side by side. For wheelchair safety the field area shall consist of a non-slip surface with a minimum of 40 - 90° raised points 1.2mm high, per square inch. Surface Applied TWSI tiles shall be held within the following dimensions and tolerances:
      - .6 Product Data: Vitrified Polymer Composite (VPC) Surface Applied TWSI tiles shall meet or exceed the following test criteria:

ASTM Reference	Test Description	Value
ASTM D 695	Compressive Strength	≥ 193 MPa
ASTM D 790	Flexural Strength	≥ 172 MPa
ASTM D 638	Tensile Strength	≥ 131 MPa
ASTM D 5420	Impact Resistance	≥ 2,300 J/m
ASTM D 696	Coefficient of Thermal Expansion	5.0 x 10 <sup>-6</sup> /°C
ASTM C 1028	Static Coefficient of Friction	≥ 0.80
ASTM E 84	Flame Spread Index	≤ 25
ASTM D 570	Water Absorption	0.05%
ASTM C 501	Abrasive Wear Index Iw	≥ 50
ASTM D 2486	Abrasive Scrub Test	≤ 1.5 mm
ASTM B 117	Salt Spray (300 hrs)	No effect
ASTM D 1037	Accelerated Aging Cycle Testing	No effect
ASTM D 543	Chemical Resistance	No effect
ASTM G 155	Accelerated Weathering	ΔE ≤ 4.5
Part No.		Size (mm x mm)
ADA-S-24 48		648 x 1220

.2 Manufacturer's Warranty

.1 Surface Applied TWSI tiles shall be warranted in writing for a period of five (5) years from date of substantial completion. The guarantee includes factory defects, breakage, and deformation.

.3 Installation Warranty

.1 Surface Applied TWSI tile installation shall be warranted in writing for a period of two (2) years. Alternate products approved during the tendering process must be guaranteed for an additional three (3) years. Product must be guaranteed from defective work.

.4 Manufacturers

.1 The Vitrified Polymer Composite (VPC) Surface Applied Tactile Walking Surface Indicator Tile specified is based on Armor Tile as distributed under license by Kinesik Engineered Products (855-364-7763). Existing engineered and field tested products, which have been in successful service for a period of three (3) years are subject to compliance with requirements, may be incorporated in the work and shall meet or exceed the specified test criteria and characteristics.

.2 Colour: Colour shall be homogeneous throughout the tile.

Colour	Federal Colour No.
Federal Yellow	33538

.5 Materials

.1 Fasteners: Colour matched (where appropriate), corrosion resistant, flat head drive anchor: ¼" diameter x 1 ½" long as supplied by Kinesik Engineered Products.

.2 Adhesive: Tactile Bond and Seal (TBS) as supplied by Kinesik Engineered Products.

.3 Sealant: Tactile Bond and Seal (TBS) as supplied by Kinesik Engineered Products.

.6 Cleaning, Protecting and Maintenance

.1 Protect tiles against damage during construction period to comply with TWSI tile manufacturer's specification.

.2 Protect tiles against damage from rolling loads following installation by covering with plywood or hardwood.

.3 Clean tiles not more than four days prior to date scheduled for inspection intended to establish date of substantial completion in each area of project. Clean tile by method specified by tile manufacturer.

.4 Comply with manufacturer's maintenance manual for cleaning and maintaining tile surface and it is recommended to perform annual inspections for safety and integrity.

**PART 3 - EXECUTION**

**3.1 DELIVERY AND**

.1 Deliver and store materials in original packages with the

**STORAGE**

manufacturer's labels and seals intact.

**3.2 PREPARATION**

- .1 The recommendations of the manufacturer of the floor covering will be considered as minimal. Remove foreign matter, grease, oil, paint, and anything that may prevent good adhesion.
- .2 Where the surface is concrete, remove loose material, grind out protrusions, patch depressions, and fill cracks and holes with latex cement.
- .3 Do not use gypsum products.

**3.3 APPLICATION:  
FLOORING**

- .1 During all surface preparation and installation procedures, ensure adequate safety guidelines are in place and that they are in accordance with the applicable industry and government standards.
- .2 The application of all tiles, adhesives, mechanical fasteners, and caulking shall be in strict accordance with the guidelines set by their respective manufacturers. Not recommended for asphalt applications.
- .3 Coordinate with the Contractor or Engineer to ensure that the surfaces being prepared and fabricated to receive the tiles are constructed correctly and adequately for tile installation. Review manufacturer and contract drawings with the Contractor prior to the construction and refer any and all discrepancies to the Engineer.
- .4 Set the tile true and square to the curb ramp area as detailed in the design drawings, so that its location can be marked on the concrete surface. A thin permanent marker works well. Remove tile when done marking its location.
- .5 The surface to receive the Surface Applied TWSI tile is to be mechanically cleaned with a diamond cup grinder or shot blaster to remove any dirt or foreign material. This cleaning and roughening of the concrete surface should include at least 4 inches around the perimeter of the area to receive the tile, and also along the cross pattern established by the corresponding areas on the backside of the tile. Those same areas should then be cleaned with a clean rag soaked in Acetone.
- .6 Immediately prior to installing the Surface Applied TWSI tile, the concrete surfaces must be inspected to ensure that they are clean, dry, free of voids, curing compounds, projections, loose material, dust, oil, grease, sealers and determined to be

- structurally sound and cured for a minimum of 30 days.
- .7 Using Acetone, wipe the backside of the tile around the perimeter and along the internal cross pattern, to remove any dirt or dust particles from the area to receive the adhesive.
  - .8 Apply TBS to the backside of the tile, following the perimeter and internal cross pattern established by the tile manufacturer. Sufficient adhesive must be placed on the prescribed areas to have full coverage across the 2" width of the adhesive locator and shall be applied to within 1/4" continuously around the perimeter edge of the tile. The entire tube of adhesive shall be applied to the back of each tile, sizes 610mm x 1220mm and greater.
  - .9 Set the tile true and square to the curb ramp area as detailed in the design drawings.
  - .10 Working from the center of the tile outwards, proceed to drill and install all fasteners in the tile's molded recesses.
  - .11 Standing with both feet applying pressure around the molded recess provided in the tile, drill a hole true and straight to a depth of 3½" using a 1/4" masonry drill bit. Drill through the tile without hammer option (on the drill) until the tile has been successfully penetrated, then with hammer option (on the drill) to drill into the concrete. Maintaining foot pressure on both sides of the hole while drilling prevents concrete dust from accumulating between the tile and concrete which can affect the tile being installed flush and may compromise installation integrity.
  - .12 Immediately after drilling each hole, before moving on to the next, and while still applying foot pressure, mechanically fasten tiles to the concrete substrate using a leather bound or hard plastic mallet to set the fasteners. Ensure the fastener has been placed to full depth in the dome, straight, and flush to the top of dome. Drive the pin of the fastener with the mallet, taking care to avoid any inadvertent blows to the truncated dome or tile surface.
  - .13 Following the installation of the fasteners, the concrete dust should be vacuumed, brushed or blown away from the tile's surface and adjacent concrete. Using Acetone on a rag, wipe the concrete around the tile's perimeter to ensure a clean, dry surface to receive perimeter sealant.
  - .14 TBS perimeter caulking sealant should be applied following the sealant manufacturer's recommendations. Tape all perimeter edges of the tile back 1/16" from the tile's perimeter edge and tape the adjacent concrete back 1/2" from the tile's perimeter edge to maintain a straight and even caulking line. Apply sealant around tile perimeter using care to work sealant into any void between the tile and concrete interface. Tool the perimeter caulking with a rounded plastic applicator or spatula to create a cove profile between the tile and adjacent concrete. Remove tape immediately after tooling perimeter

- caulking sealant.
- .15 Do not allow foot traffic on installed tiles until the perimeter caulking sealant has cured sufficiently to avoid tracking. Curing time is weather dependent (average cure time at 75° F is 30 minutes). Adhesive or caulking on the surface of the Armor-Tile can be removed with Acetone.
- .16 If installing adjacent tiles, note the orientation of each tile. Careful attention will reveal that one of the long edges of the tile is different than the other in regard to the tiny dotted texture. You may also note a larger perimeter margin before the tiny dotted texture pattern begins. Consistent orientation of each Armor-Tile is required in order that the truncated domes on adjacent tiles line up with each other.
- .17 In order to maintain proper spacing between truncated domes on adjacent tiles, the tapered edge should be trimmed off using a continuous rim diamond blade in a circular saw or mini-grinder. The use of a straightedge to guide the cut is required. All cuts should be made prior to installation of the tiles. If installing adjacent tiles, care should be taken to leave a 1/8 inch gap between each tile to allow for expansion and contraction.
- .18 If tiles are custom cut to size, if pre-molded recesses (to receive fasteners) are removed by the cut, or to maintain a tight installation to the substrate then any truncated dome can be center-drilled with a 1/4 inch masonry drill bit to create a through hole, and the through hole must be countersunk with a suitable carbide countersink bit to receive mechanical fasteners. Care should be taken to not countersink too widely or deeply. Fasteners should be flush with the top of the truncated dome when countersunk properly.

**1.3 QUALITY ASSURANCE**

- .1 Qualifications:
  - .1 Contractor: minimum of five years proven satisfactory experience. Provide list of last three comparable jobs including, job name and location, specifying authority, and project manager.
  - .2 Journeymen: qualified journeymen who have "Tradesman Qualification Certificate of Proficiency" engaged in painting work.
  - .3 Apprentices: working under direct supervision of qualified trades person in accordance with trade regulations.
- .2 Mock-Ups:
  - .1 Construct mock-ups in accordance with Section 00 10 00.
    - .1 Provide 1000 mm x 1000 mm mock-up. Prepare and

paint designated surface, area, room or item (in each colour scheme) to specified requirements, with specified paint or coating showing selected colours, gloss/sheen, textures.

.2 Mock-up will be used:

.1 To judge workmanship, substrate preparation, operation of equipment and material application and workmanship to MPI Architectural Painting Specification Manual standards.

.3 Locate where directed.

.4 Allow 24 hours for inspection of mock-up before proceeding with work.

.5 When accepted, mock-up will demonstrate minimum standard of quality required for this work. Approved mock-up may not remain as part of finished work.

.3 Health and Safety:

.1 Do construction occupational health and safety in accordance with Section 01 15 45.

#### 1.4 SCHEDULING

.1 Submit work schedule for various stages of painting to Departmental Representative for review. Submit schedule minimum of 48 hours in advance of proposed operations.

.2 Paint occupied facilities in accordance with approved schedule. Schedule operations to approval of Departmental Representative such that painted surfaces will have dried and cured sufficiently before occupants are affected.

.3 Obtain written authorization from Departmental Representative for changes in work schedule.

.4 Schedule painting operations to prevent disruption of occupants.

.5 Painting should occur before absorptive materials/furnishings have been installed in the space.

#### 1.5 WARNING

.1 **DO NOT USE SPRAY PAINT EQUIPMENT:** Only paint brush and roller will be accepted on this project.

#### 1.6 SUBMITTALS

.1 Submittals in accordance with Section 00 10 00.

.2 Product Data:

.1 Submit product data and instructions for each paint and coating product to be used.

.2 Submit product data for the use and application of paint thinner.

.3 Submit two copies of Workplace Hazardous Materials Information System (WHMIS) Material Safety Data Sheets (MSDS) in accordance with Section 00 10 00.

- .3 Samples:
  - .1 Submit full range colour sample chips to indicate where colour availability is restricted.
  - .2 Submit duplicate 200 x 300 mm sample panels of each paint, stain, clear coating, special finish with specified paint or coating in colours, gloss/sheen and textures required to MPI Architectural Painting Specification Manual standards submitted on following substrate materials:
    - .1 3 mm plate steel for finishes over metal surfaces.
    - .2 13 mm birch plywood for finishes over wood surfaces.
    - .3 50 mm concrete block for finishes over concrete or concrete masonry surfaces.
    - .4 13 mm gypsum board for finishes over gypsum board and other smooth surfaces.
  - .3 Retain reviewed samples on-site to demonstrate acceptable standard of quality for appropriate on-site surface.
  - .4 Test reports: submit certified test reports for paint from approved independent testing laboratories, indicating compliance with specifications for specified performance characteristics and physical properties.
    - .1 Lead, cadmium and chromium: presence of and amounts.
    - .2 Mercury: presence of and amounts.
    - .3 Organochlorines and PCBs: presence of and amounts.
  - .5 Certificates: submit certificates signed by manufacturer certifying that materials comply with specified performance characteristics and physical properties.
  - .6 Manufacturer's Instructions:
    - .1 Submit manufacturer's installation and application instructions.
  - .7 Closeout Submittals: submit maintenance data for incorporation into manual specified in Section 00 10 00, include following:
    - .1 Product name, type and use.
    - .2 Manufacturer's product number.
    - .3 Colour number[s].
    - .4 MPI Environmentally Friendly classification system rating.

## 1.7 MAINTENANCE

- .1 Extra Materials:
  - .1 Deliver to extra materials from same production run as products installed. Package products with protective covering and identify with descriptive labels. Comply with Section 00 10 00.
  - .2 Quantity: provide one litre can of each type and colour of primer, stain, finish coating. Identify colour and paint type in relation to established colour schedule and finish system.
  - .3 Delivery, storage and protection: comply with Departmental Representative requirements for delivery and storage of extra materials.

**1.8 DELIVERY,  
STORAGE AND  
HANDLING**

- .1 Packing, Shipping, Handling and Unloading:
  - .1 Pack, ship, handle and unload materials in accordance with Section 00 10 00.
- .2 Acceptance at Site:
  - .1 Identify products and materials with labels indicating:
    - .1 Manufacturer's name and address.
    - .2 Type of paint or coating.
    - .3 Compliance with applicable standard.
    - .4 Colour number in accordance with established colour schedule.
- .3 Remove damaged, opened and rejected materials from site.
- .4 Storage and Protection:
  - .1 Provide and maintain dry, temperature controlled, secure storage.
  - .2 Store materials and supplies away from heat generating devices.
  - .3 Store materials and equipment in well ventilated area with temperature range 7 degrees C to 30 degrees C.
- .5 Store temperature sensitive products above minimum temperature as recommended by manufacturer.
- .6 Keep areas used for storage, cleaning and preparation clean and orderly. After completion of operations, return areas to clean condition.
- .7 Remove paint materials from storage only in quantities required for same day use.
- .8 Fire Safety Requirements:
  - .1 Provide one 9 kg Type ABC fire extinguisher adjacent to storage area.
  - .2 Store oily rags, waste products, empty containers and materials subject to spontaneous combustion in ULC approved, sealed containers and remove from site on a daily basis.
  - .3 Handle, store, use and dispose of flammable and combustible materials in accordance with National Fire Code of Canada requirements.
- .9 Waste Management and Disposal:
  - .1 Separate waste materials for recycling in accordance with Section 01 74 19 - Construction/Demolition Waste Management and Disposal.
  - .2 Remove from site and dispose of packaging materials at appropriate recycling facilities.
  - .3 Collect and separate for disposal paper, plastic, polystyrene, corrugated cardboard, packaging material for recycling in accordance with Waste Management Plan (WMP).
  - .4 Separate for recycling and place in designated containers waste in accordance with Waste Management Plan (WMP).

- .5 Place materials defined as hazardous or toxic in designated containers.
- .6 Handle and dispose of hazardous materials in accordance with CEPA, TDGA, Regional and Municipal Regulations.
- .7 Ensure emptied containers are sealed and stored safely.
- .8 Unused paint materials must be disposed of at official hazardous material collections site.
- .9 Paint, stain and wood preservative finishes and related materials (thinners, and solvents) are regarded as hazardous products and are subject to regulations for disposal. Information on these controls can be obtained from Provincial Ministries of Environment and Regional levels of Government.
- .10 Material which cannot be reused must be treated as hazardous waste and disposed of in an appropriate manner.
- .11 Place materials defined as hazardous or toxic waste, including used sealant and adhesive tubes and containers, in containers or areas designated for hazardous waste.
- .12 To reduce the amount of contaminants entering waterways, sanitary/storm drain systems or into ground follow these procedures:
  - .1 Retain cleaning water for water-based materials to allow sediments to be filtered out.
  - .2 Retain cleaners, thinners, solvents and excess paint and place in designated containers and ensure proper disposal.
  - .3 Return solvent and oil soaked rags used during painting operations for contaminant recovery, proper disposal, or appropriate cleaning and laundering.
  - .4 Dispose of contaminants in approved legal manner in accordance with hazardous waste regulations.
  - .5 Empty paint cans are to be dry prior to disposal or recycling (where available).
- .13 Where paint recycling is available, collect waste paint by type and provide for delivery to recycling or collection facility.
- .14 Set aside and protect surplus and uncontaminated finish materials. Deliver to or arrange collection by employees, or organizations for verifiable re-use or re-manufacturing.

**1.9 SITE CONDITIONS**

- .1 Surface and Environmental Conditions:
  - .1 Apply paint finish in areas where dust is no longer being generated by related construction operations or when wind or ventilation conditions are such that airborne particles will not affect quality of finished surface.
  - .2 Apply paint to adequately prepared surfaces and to surfaces within moisture limits.
  - .3 Apply paint when previous coat of paint is dry or adequately cured.
- .2 Additional interior application requirements:
  - .1 Apply paint finishes when temperature at location of installation can be satisfactorily maintained within manufacturer's recommendations.
  - .2 Apply paint in occupied facilities during silent hours only.

Schedule operations to approval of Departmental Representative such that painted surfaces will have dried and cured sufficiently before occupants are affected.

## PART 2 - PRODUCTS

### 2.1 MATERIALS

- .1 Paint materials listed in the MPI Approved Products List (APL) are acceptable for use on this project.
- .2 Provide paint materials for paint systems from single manufacturer.
- .3 Only qualified products with E2 "Environmentally Friendly" rating are acceptable for use on this project.
- .4 Conform to latest MPI requirements for interior painting work including preparation and priming.
- .5 Materials (primers, paints, coatings, varnishes, stains, lacquers, fillers, thinners, solvents, etc.) in accordance with MPI Architectural Painting Specification Manual "Approved Product" listing.
- .6 Linseed oil, shellac, and turpentine: highest quality product from approved manufacturer listed in MPI Architectural Painting Specification Manual, compatible with other coating materials as required.
- .7 Provide paint products meeting MPI "Environmentally Friendly" E2 ratings based on VOC (EPA Method 24) content levels.
- .8 Use MPI listed materials having minimum E2 rating where indoor air quality (odour) requirements exist.
- .9 Paints, coatings, adhesives, solvents, cleaners, lubricants, and other fluids:
  - .1 Water-based.
  - .2 Non-flammable.
  - .3 Manufactured without compounds which contribute to ozone depletion in the upper atmosphere.
  - .4 Manufactured without compounds which contribute to smog in the lower atmosphere.
  - .5 Do not contain methylene chloride, chlorinated hydrocarbons, toxic metal pigments.
- .10 Formulate and manufacture water-borne surface coatings with no aromatic solvents, formaldehyde, halogenated solvents, mercury, lead, cadmium, hexavalent chromium or their compounds.
- .11 Flash point: 61.0 degrees C or greater for water-borne surface coatings and recycled water-borne surface coatings.

- .12 Ensure manufacture and process of both water-borne surface coatings and recycled water-borne surface coatings does not release:
  - .1 Matter in undiluted production plant effluent generating 'Biochemical Oxygen Demand' (BOD) in excess of 15mg/L to natural watercourse or sewage treatment facility lacking secondary treatment.
  - .2 Total Suspended Solids (TSS) in undiluted production plant effluent in excess of 15mg/L to natural watercourse or a sewage treatment facility lacking secondary treatment.
- .13 Water-borne paints and stains, recycled water-borne surface coatings and water borne varnishes to meet minimum "Environmentally Friendly" E2 rating.
- .14 Recycled water-borne surface coatings must not contain:
  - .1 Lead in excess of 600.0 ppm weight/weight total solids.
  - .2 Mercury in excess of 50.0 ppm weight/weight total product.
  - .3 Cadmium in excess of 1.0 ppm weight/weight total product.
  - .4 Hexavalent chromium in excess of 3.0 ppm weight/weight total product.
  - .5 Organochlorines or polychlorinated biphenyls (PCBS) in excess of 1.0 ppm weight/weight total product.

**2.2 MIXING AND TINTING**

- .1 Mix paste, powder or catalyzed paint mixes in accordance with manufacturer's written instructions.
- .2 Use and add thinner in accordance with paint manufacturer's recommendations. Do not use kerosene or similar organic solvents to thin water-based paints.
- .3 Re-mix paint in containers prior to and during application to ensure break-up of lumps, complete dispersion of settled pigment, and colour and gloss uniformity.

**2.3 GLOSS/SHEEN RATINGS**

- .1 Paint gloss is defined as sheen rating of applied paint, in accordance with following values:

Gloss Level	Description	Units @ 60 degrees	Units @ 85 degrees
G1	Matte or Flat finish	0 to 5	10 maximum
G2	Velvet finish	0 to 10	10 to 35
G3	Eggshell finish	10 to 25	10 to 35
G4	Satin finish	20 to 35	35 minimum
G5	Semi-Gloss finish	35 to 70	
G6	Gloss finish	70 to 85	
G7	High-Gloss finish	>85	

- .2 Gloss level ratings of painted surfaces as noted on Finish Schedule.

**2.4 INTERIOR  
PAINTING SYSTEMS**

- .1 Concrete vertical and horizontal (soffits) surfaces:
  - .1 INT 3. 1A – Two coats Latex over one coat of Latex primer.
    - .1 Satin Finish: Horizontal (soffits)
    - .2 Semi-Gloss Finish: Vertical
  - .2 Concrete masonry units:
    - .1 INT 4.2A – Two coats Latex finish over one coat of Latex primer.
      - .1 Semi-Gloss Finish
  - .3 Ferrous Metal Surfaces:
    - .1 INT 5.1B – Two coats Waterborne light industrial coating over one coat of Alkyd primer.
      - .1 Semi-Gloss Finish.
  - .4 Galvanized metal:
    - .1 INT 5.3C – Two coats Alkyd over one coat of galvanized primer.
      - .1 Semi-Gloss Finish.
  - .5 Plaster and gypsum board:
    - .1 INT 9.2A – Two coats Latex over one coat of Latex primer.
      - .1 Semi-Gloss finish
  - .6 Interior Unpainted Wood:
    - .1 INT 6.3B – Two coats alkyd over one coat of alkyd primer.
      - .1 Semi-Gloss finish

**2.5 SOURCE QUALITY  
CONTROL**

- .1 Perform following tests on each batch of consolidated post-consumer material before surface coating is reformulated and canned. Testing by laboratory or facility which has been accredited by Standards Council of Canada.
  - .1 Lead, cadmium and chromium are to be determined using ICP-AES (Inductively Coupled Plasma - Atomic Emission Spectroscopy) technique no. 6010 as defined in EPA SW-846.
  - .2 Mercury is to be determined by Cold Vapour Atomic Absorption Spectroscopy using Technique no. 7471 as defined in EPA SW-846.
  - .3 Organochlorines and PCBs are to be determined by Gas Chromatography using Technique no. 8081 as defined in EPA SW-846.

**PART 3 - EXECUTION**

**3.1 MANUFACTURER'S  
INSTRUCTIONS**

- .1 Compliance: comply with manufacturer's written recommendations or specifications, including product technical bulletins, handling, storage and installation instructions, and data sheet.

**3.2 GENERAL**

- .1 Perform preparation and operations for interior painting in accordance with MPI Architectural Painting Specifications Manual except where specified otherwise.
- .2 Apply paint materials in accordance with paint manufacturer's written application instructions.

**3.3 EXAMINATION**

- .1 Investigate existing substrates for problems related to proper and complete preparation of surfaces to be painted. Report to Departmental Representative, damages, defects, unsatisfactory or unfavourable conditions before proceeding with work.
- .2 Conduct moisture testing of surfaces to be painted using properly calibrated electronic moisture meter, except test concrete floors for moisture using simple "cover patch test". Do not proceed with work until conditions fall within acceptable range as recommended by manufacturer.
- .3 Maximum moisture content as follows:
  - .1 Stucco, plaster and gypsum board: 12%
  - .2 Concrete: 12%
  - .3 Clay and Concrete Block/Brick: 12%
  - .4 Wood: 15%

**3.4 PREPARATION**

- .1 Protection:
  - .1 Protect existing building surfaces and adjacent structures from paint spatters, markings and other damage by suitable non-staining covers or masking. If damaged, clean and restore surfaces as directed by Departmental Representative.
  - .2 Protect items that are permanently attached such as Fire Labels on doors and frames.
  - .3 Protect factory finished products and equipment.
  - .4 Protect building occupants and general public in and about the building.
- .2 Surface Preparation:
  - .1 Remove electrical cover plates, light fixtures, surface hardware on doors, bath accessories and other surface mounted equipment, fittings and fastenings prior to undertaking painting operations. Identify and store items in secure location and re-installed after painting is completed.
  - .2 Move and cover furniture and portable equipment as necessary to carry out painting operations. Replace as painting operations progress.
  - .3 Place "WET PAINT" signs in occupied areas as painting operations progress. Signs to approval of Departmental Representative.
- .3 Clean and prepare surfaces in accordance with MPI Architectural Painting Specification Manual requirements. Refer to MPI Manual in

regard to specific requirements and as follows:

- .1 Remove dust, dirt, and other surface debris by vacuuming, wiping with dry, clean cloths.
  - .2 Wash surfaces with a biodegradable detergent and clean warm water using a stiff bristle brush to remove dirt, oil and other surface contaminants.
  - .3 Rinse scrubbed surfaces with clean water until foreign matter is flushed from surface.
  - .4 Allow surfaces to drain completely and allow to dry thoroughly.
  - .5 Prepare surfaces for water-based painting, water-based cleaners should be used in place of organic solvents.
  - .6 Use trigger operated spray nozzles for water hoses.
  - .7 Many water-based paints cannot be removed with water once dried. Minimize use of mineral spirits or organic solvents to clean up water-based paints.
- .4 Prevent contamination of cleaned surfaces by salts, acids, alkalis, other corrosive chemicals, grease, oil and solvents before prime coat is applied and between applications of remaining coats. Apply primer, paint, or pretreatment as soon as possible after cleaning and before deterioration occurs.
  - .5 Where possible, prime non-exposed surfaces of new wood surfaces before installation. Use same primers as specified for exposed surfaces.
    - .1 Apply vinyl sealer to MPI #36 over knots, pitch, sap and resinous areas.
    - .2 Apply wood filler to nail holes and cracks.
    - .3 Tint filler to match stains for stained woodwork.
  - .6 Sand and dust between coats as required to provide adequate adhesion for next coat and to remove defects visible from a distance up to 1000 mm.
  - .7 Clean metal surfaces to be painted by removing rust, loose mill scale, welding slag, dirt, oil, grease and other foreign substances in accordance with MPI requirements. Remove traces of blast products from surfaces, pockets and corners to be painted by brushing with clean brushes or vacuum cleaning.
  - .8 Touch up of shop primers with primer as specified.

### 3.5 APPLICATION

- .1 Apply paint by brush, roller. Conform to manufacturer's application instructions unless specified otherwise.
- .2 Brush and Roller Application:
  - .1 Apply paint in uniform layer using brush and/or roller type suitable for application.
  - .2 Work paint into cracks, crevices and corners.
  - .3 Paint surfaces and corners not accessible to brush using spray, daubers and/or sheepskins. Paint surfaces and corners not accessible to roller using brush, daubers or sheepskins.

- 
- .4 Brush and/or roll out runs and sags, and over-lap marks. Rolled surfaces free of roller tracking and heavy stipple.
  - .5 Remove runs, sags and brush marks from finished work and repaint.
  - .3 Use dipping, sheepskins or daubers only when no other method is practical in places of difficult access.
  - .4 Apply coats of paint continuous film of uniform thickness. Repaint thin spots or bare areas before next coat of paint is applied.
  - .5 Allow surfaces to dry and properly cure after cleaning and between subsequent coats for minimum time period as recommended by manufacturer.
  - .6 Sand and dust between coats to remove visible defects.
  - .7 Finish surfaces both above and below sight lines as specified for surrounding surfaces, including such surfaces as tops of interior cupboards and cabinets and projecting ledges.
- 3.6 MECHANICAL/  
ELECTRICAL EQUIPMENT**
- .1 Paint finished area exposed conduits, piping, hangers, ductwork and other mechanical and electrical equipment with colour and finish to match adjacent surfaces, except as indicated.
  - .2 Touch up scratches and marks on factory painted finishes and equipment with paint as supplied by manufacturer of equipment.
  - .3 Do not paint over nameplates.
  - .4 Keep sprinkler heads free of paint.
  - .5 Paint inside of ductwork where visible behind grilles, registers and diffusers with primer and one coat of matt black paint.
- 3.7 SITE TOLERANCES**
- .1 Walls: no defects visible from a distance of 1000 mm at 90 degrees to surface.
  - .2 Ceilings: no defects visible from floor at 45 degrees to surface when viewed using final lighting source.
  - .3 Final coat to exhibit uniformity of colour and uniformity of sheen across full surface area.
- 3.8 CLEAN-UP**
- .1 Remove paint where spilled, splashed, splattered or sprayed as work progresses using means and materials that are not detrimental to affected surfaces.
  - .2 Keep work area free from an unnecessary accumulation of tools, equipment, surplus materials and debris.

- .3 Remove combustible rubbish materials and empty paint cans each day and safely dispose of same in accordance with requirements of authorities having jurisdiction.
- .4 Clean equipment and dispose of wash water used for water borne materials, solvents used for oil based materials as well as other cleaning and protective materials (e.g. rags, drop cloths, masking papers, etc.), paints, thinner, paint removers/strippers in accordance with the safety requirements of authorities having jurisdiction and as noted herein.
- .5 Painting equipment shall be cleaned in leak-proof containers that will permit particulate matter to settle out and be collected. Sediment remaining from cleaning operations shall be recycled or disposed of in a manner acceptable to authorities having jurisdiction.
- .6 Paint and coatings in excess of repainting requirements shall be recycled as noted herein.

### 3.9 RESTORATION

- .1 Clean and re-install hardware items removed before undertaken painting operations.
- .2 Remove protective coverings and warning signs as soon as practical after operations cease.
- .3 Remove paint splashings on exposed surfaces that were not painted. Remove smears and spatter immediately as operations progress, using compatible solvent.
- .4 Protect freshly completed surfaces from paint droppings and dust. Avoid scuffing newly applied paint.
- .5 Restore areas used for storage, cleaning, mixing and handling of paint to clean condition.

**1.3 SUBMITTALS**

- .1 Product Data:
  - .1 Submit manufacturer's printed product literature, specifications and data sheet in accordance with Section 00 10 00 - Submittal Procedures.
- .2 Shop Drawings:
  - .1 Submit shop drawings in accordance with Section 00 10 00 - Submittal Procedures.
  - .2 Indicate fabrication details, plans, elevations, hardware, and installation details.
- .3 Samples:
  - .1 Submit samples in accordance with Section 00 10 00 - Submittal Procedures.

- .4 Manufacturer's Instructions:
  - .1 Submit manufacturer's installation instructions.
- .5 Manufacturers' Field Reports: submit copies of manufacturers' field reports.

#### 1.4 QUALITY ASSURANCE

- .1 Test Reports: certified test reports showing compliance with specified performance characteristics and physical properties.
- .2 Certificates: product certificates signed by manufacturer certifying materials comply with specified performance characteristics and criteria and physical requirements.
- .3 Mock-ups:
  - .1 Construct mock-ups in accordance with Section 00 10 00.
    - .1 Mock-up will be used:
      - .1 To judge workmanship, substrate preparation, and material application.
    - .2 Allow 24 hours for inspection of mock-up before proceeding with work.
    - .3 When accepted, mock-up will demonstrate minimum standard of quality required for this work. Approved mock-up may remain as part of finished work.

#### PART 2 - PRODUCTS

##### 2.1 MATERIALS

- .1 Metal toilet partitions and urinal screens.
- .2 Sheet steel: commercial quality to ASTM A653 GR33 designation zinc coating.
- .3 Minimum base steel thickness:
  - .1 Panels and doors: 0.8 mm.
  - .2 Pilasters: 0.9 mm.
  - .3 Reinforcement: 3.0 mm.
- .4 Toilet Partitions:
  - .1 Doors 1460 mm high.
  - .2 Stiles 2083 mm high.
- .5 Urinal Screens:
  - .1 457 mm x 1067 mm high.
- .6 Headrails: 25 mm x 41 mm x 1.5 mm thick, clear anodized, extruded aluminum, anti grip design.
- .7 Pilaster shoe: 0.8 mm stainless steel 100 mm high.

- .8 Attachment: stainless steel tamperproof type screws and bolts.
  - .9 Acceptable Manufacturer:
    - .1 Hadrian Manufacturing Inc.
- 2.2 COMPONENTS**
- .1 Hinges:
    - .1 Heavy duty, self-lubricating sleeve, fully concealed, mounted on upper and lower pilaster hinge brackets.
    - .2 Material/finish: stainless steel.
    - .3 Swing: as indicated.
    - .4 Return movement: gravity.
    - .5 Emergency access feature.
  - .2 Latch set: surface mounted, combination latch, combination door-stop, keeper and bumper, chrome plated non-ferrous, emergency access feature.
  - .3 Wall and connecting brackets: chrome plated non-ferrous extrusion or casting.
  - .4 Coat hook: combination hook and rubber door bumper, chrome plated non-ferrous.
  - .5 Door pull: Barrier-free type, stainless steel.
- 2.3 FABRICATION**
- .1 Doors and screens: 25 mm thick, two steel sheets faces pressure bonded to honeycomb core, 1460 mm high.
  - .2 Pilasters: 32 mm thick, constructed same as door, 2083 mm high.
  - .3 Provide formed and closed edges for doors, panels and pilasters. Miter and weld corners and grind smooth.
  - .4 Provide internal reinforcement at areas of attached hardware and fittings. Temporarily mark location of reinforcement for tissue holders and grab bars.
  - .5 Provide 0.8 mm thick type 316 stainless steel protective shields on urinal side of toilet partition panels next to urinals and on urinal screens. Make protective shields 1000 mm high with top of shield 1200 mm above finished floor. Make shields to full width of partition or screen panel. Fasten with stainless steel screws.
- 2.4 FINISHES**
- .1 Clean, degrease and neutralize steel components with phosphate or chromate treatment.
  - .2 Spray apply primer to CAN/CGSB-1.81, 1 coat.

- .3 Spray apply finish enamel to CAN/CGSB-1.88, type 2 gloss, 2 coats and bake to smooth, hard finish 0.025 mm thick.
- .4 Finish: doors and pilaster/panels same colour as selected from manufacturer's standard colours: 535 Light Grey.

### PART 3 - EXECUTION

#### 3.1 MANUFACTURER'S INSTRUCTIONS

- .1 Compliance: comply with manufacturer's written data, including product technical bulletins, product catalogue installation instructions, product carton installation instructions, and data sheets.

#### 3.2 INSTALLATION

- .1 Ensure supplementary anchorage, if required, is in place.
- .2 Do work in accordance with CAN/CSA-B651.

#### 3.3 ERECTION

- .1 Partition erection.
  - .1 Install partitions secure, plumb and square.
  - .2 Leave 12 mm space between wall and panel or end pilaster.
  - .3 Anchor mounting brackets to masonry/concrete surfaces using screws and shields: blocking/backing must be provided, to hollow masonry walls using bolts and toggle type anchors.
  - .4 Attach panel and pilaster to brackets with through type sleeve bolt and nut.
  - .5 Provide for adjustment of floor-braced pilasters variations with screw jack through steel saddles made integral with pilaster. Conceal floor fixings with stainless steel shoes.
  - .6 Equip doors with hinges, latch set, and each stall with coat hook mounted on partition wall, mounting heights 1200 mm. Adjust and align hardware for easy, proper function. Set door open position at 30 degrees to front. Install door bumper door mounting.
  - .7 Equip outswinging doors with door pulls on inside and outside of door in accordance with CAN/CSA-B651.
  - .8 Install hardware grab bars in barrier-free stalls..
- .2 Floor supported and overhead braced partition erection.
  - .1 Attach pilasters to floor with pilaster supports and level, plumb, and tighten installation with levelling device.
    - .1 Secure pilaster shoes in position.
    - .2 Secure headrail to pilaster face with not less than two fasteners per face.
    - .3 Set tops of doors parallel with overhead brace when doors are in closed position.
  - .2 Floor supported partition erection.
    - .1 Secure pilasters to floor with pilaster supports anchored with minimum 50 mm penetration in structural floor.
    - .2 Level, plumb and tighten installation with levelling

- device.
- .3 Secure pilaster shoes in position.
- .4 Set tops of doors level with tops of pilasters when doors are in closed position.
- .3 Screens erection:
  - .1 Provide urinal stall screens consisting of panel and post.
  - .2 Anchor wall-hung screen panels to walls with 3 panel brackets and wing brackets and vertical upright consisting of tubular headrail stock and end sockets anchored to floor.
  
- 3.4 FIELD QUALITY CONTROL**
  - .1 Have manufacturer of products supplied under this Section review Work involved in handling, installation/application, protection and cleaning of its product, and submit written reports in acceptable format to verify compliance of Work with Contract.
  - .2 Manufacturer's field services: provide manufacturer's field services consisting of product use recommendations and periodic site visits for inspection of product installation in accordance with manufacturer's instructions.
  
- 3.5 ADJUSTING**
  - .1 Adjust doors and locks for optimum, smooth operating condition.
  - .2 Lubricate hardware and other moving parts.
  
- 3.6 CLEANING**
  - .1 Perform cleaning after installation to remove construction and accumulated environmental dirt.
  - .2 Clean surfaces after installation using manufacturer's recommended cleaning procedures.
  - .3 Clean aluminum with damp rag and approved non-abrasive cleaner.
  - .4 Clean and polish hardware and stainless components.
  - .5 Upon completion of installation, remove surplus materials, rubbish, tools and equipment barriers.

### 1.3 SUBMITTALS

- .1 Product Data:
  - .1 Submit manufacturer's printed product literature, specifications and data sheet in accordance with Section 00 10 00 - Submittal Procedures.
- .2 Shop Drawings:
  - .1 Submit shop drawings in accordance with Section 00 10 00 - Submittal Procedures.
  - .2 Indicate fabrication details, plans, elevations, hardware, and

installation details.

- .3 Samples:
  - .1 Submit samples in accordance with Section 00 10 00 - Submittal Procedures.
  - .2 Submit duplicate 300 x 300 mm samples of panel showing finishes, edge and corner construction and core construction.
- .4 Manufacturer's Instructions:
  - .1 Submit manufacturer's installation instructions.
- .5 Manufacturers' Field Reports: submit copies of manufacturers field reports.

#### 1.4 QUALITY ASSURANCE

- .1 Test Reports: certified test reports showing compliance with specified performance characteristics and physical properties.
- .2 Certificates: product certificates signed by manufacturer certifying materials comply with specified performance characteristics and criteria and physical requirements.

### PART 2 - PRODUCTS

#### 2.1 MATERIALS

- .1 Shower and dressing compartments.
- .2 Acceptable Manufacturer: Bobrick Duraline Series.
- .3 Compact Laminate (Solid Phenolic) Dressing Compartments and Shower Dividers:
  - .1 Doors:
    - .1 Height
      - .1 Door/Panel Height: 1830 mm
      - .2 Floor Clearance: 110 mm
    - .2 Gap-Free interlocking design.
  - .3 Stiles Mounting Configuration:
    - .1 Floor-mounted, overhead-braced with satin finish, extruded anodized aluminum headrails, 1.65 mm thick with anti-grip profile.
      - .1 Stile Height: 2110 mm
- .4 Materials: Solidly fused plastic laminate with matte-finish melamine surfaces; integrally bonded coloured face sheets and black phenolic-resin core.
- .5 Edges: Black; brown edges not acceptable.

- .6 Colour: 949-58 White
- .7 Fire Resistance:
  - .1 National Fire Protection Association/International Building Code Interior Wall and Ceiling Finish: Class B / Uniform Building Code: Class II.
- .8 Finished Thickness:
  - .1 Stiles and Doors: ¾ inch (19 mm).
  - .2 Panels 13 mm.
- .9 Stiles: Floor-anchored stiles furnished with expansion shields and threaded rods.
  - .1 Levelling Devices: 7 gauge, 5 mm thick, corrosion-resistant, chromate-treated, double zinc-plated steel angle leveling bar bolted to stile; furnished with 10 mm diameter threaded rods, hex nuts, lock washers, flat washers, spacer sleeves, expansion anchors, and shoe retainers.
  - .2 Stile Shoes: One-piece, 22 gauge (0.8 mm), 18-8, Type 304 stainless steel, 102 mm height; tops with 90 degrees return to stile. One-piece shoe capable of adapting to 19 mm or 1 inch (25 mm) stile thickness and capable of being fastened (by clip) to stiles starting at wall line.
- .10 Wall Posts: Pre-drilled for door hardware, 18-8, Type 304, 16 gauge (1.6 mm) stainless steel with satin finish; 25 mm x 38 mm.
- .11 Anchors: Expansion shields and threaded rods at floor connections as applicable.
- .12 Hardware:
  - .1 Compliance: Operating force of less than 2.25 kg.
  - .2 Emergency Access: Hinges, latch allow door to be lifted over keeper from outside compartment on inswing doors.
  - .3 Materials: 18-8, Type 304, heavy-gauge stainless steel with satin finish.
  - .4 Doorstops: Prevents inswinging doors from swinging in beyond stile.
  - .5 Fastening: Hardware secured to door and stile by through-bolted, theft-resistant, pin-in-head Torx stainless steel machine screws into factory installed, threaded brass inserts. Fasteners secured directly into core not acceptable.
    - .1 Threaded Brass Inserts: Factory-installed; withstand direct pull force exceeding 680 kg per insert.
  - .6 Clothes Hooks: Projecting no more than 29 mm from face of door.
  - .7 Door Hardware Type:
    - .1 Institutional Hardware
      - .1 Latching: 14 gauge (2 mm) sliding door latch, 11 gauge (3.2 mm) keeper; latch slides on a shock-resistant nylon track.
      - .2 Hinges: 16 gauge (1.6 mm) stainless steel, self-closing, 3 section hinges.

- .8 Fittings:
  - .1 Standard, commercial hardware.
    - .1 Mounting Brackets: Mounted inside compartment; exposed brackets on exterior of compartment not acceptable with the exception of outswing doors.
  - .2 Institutional Hardware
    - .1 Mounting Brackets: 16 gauge (1.2 mm) stainless steel and extend full height of panel.
    - .2 U-Channels: Secure panels to stiles.
    - .3 Angle Brackets: Secure stiles-to-walls and panels to walls.

**2.2 COMPONENTS** .1 Door pull Barrier-free: type suited for stainless steel.

- 2.3 FINISHES**
- .1 Clean, degrease and neutralize steel components with phosphate or chromate treatment.
  - .2 Finish: doors and pilaster/panels same colour.

### PART 3 - EXECUTION

**3.1 MANUFACTURER'S INSTRUCTIONS** .1 Compliance: comply with manufacturer's written data, including product technical bulletins, product catalogue installation instructions, product carton installation instructions, and data sheets.

- 3.2 INSTALLATION**
- .1 Ensure supplementary anchorage, is in place.
  - .2 Do work in accordance with Manufacturer's written instructions.

- 3.3 ERECTION**
- .1 Partition erection.
    - .1 Install partitions secure, plumb and square.
    - .2 Gap-free Installation between wall and panel or end pilaster.
    - .3 Anchor mounting brackets to masonry-concrete surfaces using screws and shields, to blocking/backing must be provided hollow walls using bolts and toggle type anchors.
    - .4 Attach panel and pilaster to mounting brackets.
    - .5 Provide templates, drilling dimensions for locating threaded studs through finished ceilings.
    - .6 Equip doors with hinges, latch set, and each stall with coat hook mounted on partition wall mounting heights 1200 mm. Adjust and align hardware for easy, proper function. Set door open position at 30 degrees to front. Install door bumper door mounted.

- .7 Equip doors with door pulls on inside and outside of door in accordance with CAN/CSA-B651.
- .8 Install hardware, grab bars.
- .2 Floor supported and overhead braced partition erection.
  - .1 Attach pilasters to floor with floor channel and level, plumb, and tighten installation with secure to floor channel.
  - .2 Secure pilaster shoes in position.
  - .3 Secure headrail to pilaster face with not less than two fasteners per face.
  - .4 Set tops of doors parallel with overhead brace when doors are in closed position.
- .3 Floor supported partition erection:
  - .1 Secure pilasters to floor with pilaster supports anchored with minimum 50 mm penetration in structural floor.
  - .2 Level, plumb and tighten installation with levelling device.
  - .3 Secure pilaster shoes in position.
  - .4 Set tops of doors level with tops of pilasters when doors are in closed position.
- 3.4 FIELD QUALITY CONTROL**
  - .1 Have manufacturer of products supplied under this Section review Work involved in handling, installation/application, protection and cleaning of its product, and submit written reports in acceptable format to verify compliance of Work with Contract.
  - .2 Manufacturer's field services: provide manufacturer's field services consisting of product use recommendations and periodic site visits for inspection of product installation in accordance with manufacturer's instructions.
- 3.5 ADJUSTING**
  - .1 Adjust doors and locks for optimum, smooth operating condition.
  - .2 Lubricate hardware and other moving parts.
- 3.6 CLEANING**
  - .1 Perform cleaning after installation to remove construction and accumulated environmental dirt.
  - .2 Clean surfaces after installation using manufacturer's recommended cleaning procedures.
  - .3 Clean aluminum with damp rag and approved non-abrasive cleaner.
  - .4 Clean and polish hardware and stainless components.
  - .5 Upon completion of installation, remove surplus materials, rubbish, tools and equipment barriers.

- .1 Submit shop drawings in accordance with Section 00 10 00 - Submittal Procedures.
- .2 Indicate size and description of components, base material, surface finish inside and out, hardware and locks, attachment devices, description of rough-in-frame, building-in details of anchors for grab bars.

**1.4 CLOSEOUT SUBMITTALS**

- .1 Provide maintenance data for toilet and bath accessories for incorporation into manual specified in Section 00 10 00 - Closeout Submittals.

## PART 2 - PRODUCTS

### 2.1 MATERIALS

- .1 Sheet steel: to ASTM A 653/A653M with ZF001 designation zinc coating.
- .2 Stainless steel sheet metal: to ASTM A 167, Type 304, with No. 4 finish.
- .3 Stainless steel tubing: Type 304 peened finish..
- .4 Fasteners: concealed screws and bolts hot dip galvanized, exposed fasteners to match face of unit. Expansion shields fibre, lead or rubber as recommended by accessory manufacturer for component and its intended use.

### 2.2 COMPONENTS

- .1 Shower curtain: 0.2 mm thick translucent vinyl anti-bacterial shower curtain. Provide curtain hold-back hook and chain at each curtain.
  - .1 Acceptable Material:
    - .1 Hold back hook and chain: Frost Code 1144-500.
    - .2 Shower Curtain: Frost Code 1144-502.
    - .3 Stainless steel Curtain Hooks (Pack of 12): Frost Code 1144-501L.
- .2 Shower rods: 25 mm dia stainless steel tubing of required length with satin chrome finished flanges. Shower rod material and anchorage to withstand downward pull of 0.9 kN.
  - .1 Acceptable material:
    - .1 Shower Rod: Bobrick B-207.
- .3 Shower seat: wall mounted folding, hinged, phenolic top with stainless steel assembly.
  - .1 Acceptable material:
    - .1 Frost Code 972.
- .4 Grab bars: 38 mm dia tubing of stainless steel with peened finish, 76 mm diameter wall flanges, concealed screw attachment, flanges provided with steel back plates and all accessories. Grab bar material and anchorage to withstand downward pull of 2.2 kN.
  - .1 Acceptable material:
    - .1 Frost Code 1001NP2 24".
    - .2 Frost Code 1001NP 36".
    - .3 Frost Code 1001NP 48"
- .5 Soap holder: surface mounted, stainless steel dished tray, self draining, concealed fasteners.
  - .1 Acceptable material:
    - .1 Frost Code 1136S.

- .6 Robe hook: stainless steel with concealed fasteners.
  - .1 Acceptable material:
    - .1 Frost Code 1138S.
- .7 Waste receptacle: Type surface mounted, size 384 mm x 216 mm x 584 mm high, stainless steel.
  - .1 Acceptable Manufacturer: American Specialties Model No. 20826.
- .8 Tilt mirror: wall mounted unit, fixed framed mirror 6 mm to CAN/CGSB-12.5, stainless steel frame with shelf.
  - .1 Acceptable material:
    - .1 Frost Stock Series Mirror, Fixed Tilt: Frost Code 941-1630 FT.
    - .2 Heavy Duty Shelf 18" long x 4" deep: Frost Code 950-4.
- .9 Corner Shelf surface mounted, 204 x 204 triangle, stainless steel.
  - .1 Acceptable material:
    - .1 Frost Code 950-8 x 8.
- .10 Utility hook rack, white finish, five (5) double hooks"
  - .1 Acceptable Manufacturer: Nystrom, Product Number NH02021030

### 2.3 FABRICATION

- .1 Weld and grind joints of fabricated components flush and smooth. Use mechanical fasteners only where approved.
- .2 Wherever possible form exposed surfaces from one sheet of stock, free of joints.
- .3 Brake form sheet metal work with 1.5 mm radius bends.
- .4 Form surfaces flat without distortion. Maintain flat surfaces without scratches or dents.
- .5 Back paint components where contact is made with building finishes to prevent electrolysis.
- .6 Hot dip galvanize concealed ferrous metal anchors and fastening devices to CSA G164.
- .7 Shop assemble components and package complete with anchors and fittings.
- .8 Deliver inserts and rough-in frames to job site at appropriate time for building-in. Provide templates, details and instructions for building in anchors and inserts.
- .9 Provide steel anchor plates and components for installation on studding and building framing.

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION**

- .1 Install and secure accessories rigidly in place as follows:
  - .1 Stud walls: install steel back-plate to stud prior to plaster or drywall finish. Provide plate with threaded studs or plugs.
  - .2 Hollow masonry units or existing plaster/drywall: use toggle bolts drilled into cell/wall cavity.
  - .3 Solid masonry, marble, stone or concrete: use bolt with lead expansion sleeve set into drilled hole.
  - .4 Toilet/shower compartments: use male/female through bolts.
- .2 Install grab bars on built-in anchors provided by bar manufacturer.
- .3 Use tamper proof screws/bolts for fasteners.
- .4 Fill units with necessary supplies shortly before final acceptance of building.
- .5 Install accessories supplied by Owner.

**END OF SECTION**

**PART 1 - GENERAL**

- 1.1 RELATED SECTIONS** .1 Section 00 10 00 - Submittal Procedures.
- 1.2 REFERENCES** .1 CAN/CGSB-44.40--2001, Steel Clothing Locker.
- 1.3 SHOP DRAWINGS** .1 Submit shop drawings in accordance with Section 00 10 00 - Submittal Procedures.
- .2 Indicate type and class of locker, thicknesses of metal, fabricating and assembly methods, assembled banks of lockers, hooks, shelves, bases, trim, numbering, filler panels, end/back panels, doors, handles, locking method, finishes.
- 1.4 SAMPLES** .1 Submit samples in accordance with Section 00 10 00 - Submittal Procedures.

**PART 2 - PRODUCTS**

- 2.1 MANUFACTURED UNITS** .1 Lockers: to CAN/CGSB-44.40, Type 2 - Double tier locker, freestanding.
- .1 Size: 305 mm wide x 305 mm deep x 1829 mm high, steel thickness No.18 MSG and 305 mm wide x 455 mm x 1829 mm high.
- .2 Assembly: pop-riveted construction.
- .3 Top: flat.
- .4 Doors: one-piece perforated double-wall envelope construction, steel thickness No.16 MSG, welded to No. 18 MSG inner panel.
- .5 Door Frames: Both vertical members shall be not less than 16 gauge and formed into a rigid channel 6 mm wide exposed frame and 62 mm side depth. The frame shall be completed by 76 mm high top and bottom cross members of not less than 18 gauge formed as an open box channel and welded to the verticals. The bottom frames' full width lintel extends back and down to form a rigid box to support the bottom shelf. Both vertical frame members shall be formed to offer a full length 11 mm wide continuous door strike. The latch vertical member shall include a welded 11 gauge padlock hasp together with 11 mm o.d. air-cushioned rubber bumper. No fasteners shall be exposed on fronts of locker doors and frames.
- .6 Door handle: recessed handle aluminum.
- .7 Colour: #500 White.

- .8 Acceptable Manufacturer:
  - .1 Gladiator (Athletic) as manufactured by Hadrian Manufacturing Inc.

## 2.2 ACCESSORIES

- .1 Latching/Locking Device – Single Point
  - .1 An 11 gauge 51 mm x 9 mm padlock hasp shall be securely welded to the continuous strike midway up on the frame and centered at the handle location. The hasp shall be formed to protrude through an extruded aluminum recessed handle which is chiplocked and bonded to the door. The handle's inner surface shall be concave and grooved for finger-tip door control. To keep the door closed when not in use, 13 mm o.d. nylon friction catch shall be installed on the door to engage the frame in four (4) locations. Provide padlock.
- .2 Hinge Continuous
  - .1 A full length heavy-duty 16 gauge continuous steel piano hinge shall be securely welded to the frame and fastened to the door with screws or rivets. Hinge shall maximize security and enhance resistance to abuse and vandalism.
- .3 Ventilation
  - .1 The door shall be ventilated at upper and lower sections with staggered 13 mm wide by 25 mm high oval perforations.
- .4 Number Plate
  - .1 Doors shall have a high strength black laminated plastic number plate 64 mm wide x 25 mm high with numbers not less than 11 mm high. Plates shall accommodate up to four digits, be nestled in a recess flush with door surface and shall be fastened to the door with two rivets. Lockers will be numbered by Departmental Representative.
- .5 Interior Equipment
  - .1 In the single tier locker shall be one hat shelf and three single prong coat hooks. Double tier lockers shall have three single prong coat hooks per compartment. Two side hooks shall be provided. All hooks zinc plated steel with ball point heads and are attached with two fasteners.

**2.3 BENCHES**

- .1 Seats: Hardwood laminate 32 mm thick x 241 mm wide x 1829 mm long.
- .2 Bench Pedestals: 6 mm x 64 mm aluminum with high grade hybrid epoxy polyester powder finish. Colour to be selected by Departmental Representative.
- .3 Acceptable Manufacturer: Hadrian

**PART 3 - EXECUTION**

**3.1 INSTALLATION**

- .1 Assemble and install lockers in accordance with manufacturer's written instructions.
- .2 Securely fasten lockers to grounds and nailing strips.
- .3 Install wall trim around recessed locker banks.
- .4 Install filler panels (false fronts) where required and where obstructions occur.
- .5 Install finished end panels to exposed ends of locker banks.
- .6 Install locker numbers.

**END OF SECTION**

## **PART 1 - GENERAL**

- 1.1 References
- .1 American Society of Heating, Refrigerating and Air Conditioning Engineers (ASHRAE)
    - .1 ASHRAE 90.1-2016, Energy Standard for Buildings Except Low-Rise Residential Buildings.
  - .2 Ontario Regulation
    - .1 ONTARIO OBC-2012, 2012 Ontario Building Code Compendium.
  - .3 National Research Council Canada, 2015
    - .1 NRC Canadian Building Code, National Building Code of Canada 2015.
  - .4 National Fire Protection Association (NFPA)
    - .1 NFPA (Fire) 13, Installation of Sprinkler Systems, 2016 edition.
- 1.2 General
- .1 This section covers items common to all sections of Divisions 20, 21, 22, 23 & 25.
  - .2 Coordinate location & installation of all equipment with all trades to ensure the equipment is serviceable.
  - .3 Contractor shall be responsible to ensure that all requirements of Divisions 20, 21, 22, 23 & 25 are met and comply with all other divisions and contract documents.
  - .4 The word "provide" shall mean "supply and install".
- 1.3 Equipment
- .1 General:
    - .1 Mechanical equipment that is not regulated by the Green Energy Act, shall carry a permanent label installed by the manufacturers stating the equipment complies with the requirement of ANSI/ASHRAE/IESNA 90.1.
    - .2 The minimum equipment efficiency, standard rating and operating conditions shall be as per ANSI/ASHRAE/IESNA 90.1, superceded by Ontario Building Code (OBC) Supplementary Standard SB -10, unless indicated otherwise on contract documents. The higher of the energy efficiencies of the listed equipment shall prevail.
    - .3 Provide new materials and equipment of proven design, quality and of current models with published ratings for which replacement parts are readily available.
    - .4 Uniformity: Use product of one manufacturer unless otherwise specified, for equipment or material of the same type of classification.
  - .2 Installation:
    - .1 Unions, flanges and/or couplings: provide for ease of maintenance and disassembly.
    - .2 Space for servicing, disassembly and removal of equipment and components: provide as recommended by manufacturer, Code or as indicated; whichever is the more stringent.
    - .3 Equipment drains: pipe to floor drains in a manner which is non-obstructing.
    - .4 Install equipment, rectangular cleanouts and similar items parallel to or perpendicular to building lines.

<u>1.3 Equipment (Cont'd)</u>	.2	(Cont'd) .5 Unless otherwise specified, follow manufacturer's recommendations for safety, adequate access for inspection, maintenance and repairs. .6 Permit equipment maintenance and disassembly with minimum disturbance to connecting piping and duct systems without interference with building structure or other equipment. .7 Lubrication: Provide accessible lubricating means for bearings, including permanent lubrication "Lifetime" bearings. Extended grease nipples to be supplied.
<u>1.4 Anchor Bolts and Templates</u>	.1	Supply anchor bolts and templates for installation by other divisions.
<u>1.5 Trial Usage</u>	.1	Engineer may use equipment and systems for test purposes or for continuity of operation prior to acceptance. Supply labour, material, and instruments required for testing & operation.
<u>1.6 Protection of Openings</u>	.1	Protect equipment and systems openings from dirt, dust, and other foreign materials with materials appropriate to system.
<u>1.7 Electrical</u>	.1	Electrical work to conform to Division 26 including the following: .1 Control wiring and conduit is specified in Division 26 except for conduit, wiring and connections below 50 V which are related to control systems. Refer to Division 26 for quality of materials and workmanship. .2 Any costs associated with deviation of mechanical equipment rating affecting electrical Division 26 shall be carried by the mechanical contractor. .3 All control wiring & conduit associated with Building Automation System & HVAC controls shall be provided by Divisions 20, 21, 22, 23 & 25 including power wiring to all control panels & other field mounted control devices. Emergency power circuits are provided by Division 26 in the vicinity of the power source.
<u>1.8 Painting</u>	.1	To Section 09 91 23 - Interior Painting. .2 Apply at least one coat of corrosion resistant primer paint to ferrous supports and site fabricated work. .3 Prime and touch up marred finished paintwork to match original. Use primer or enamel to match original. Do not paint over nameplates. .4 Restore to new condition, finishes which have been damaged too extensively to be merely primed and touched up.

- 
- 1.8 Painting (Cont'd)
- .5 Hangers, supports and equipment fabricated from ferrous metals shall be given at least one coat of corrosion resistant primer paint before shipment to job site.
  - .6 Touch-up damaged surfaces of all mechanical equipment and materials, to the satisfaction of Engineer. Use primer or enamel to match original. Do not paint over nameplates.
- 1.9 Waste Management and Disposal
- .1 Waste Reduction Workplan (WRW):
    - .1 Perform work in accordance with project's WRW. If one does not exist, provide the following:
      - .1 Identify opportunities for reduction, re-use and/or recycling of materials.
      - .2 Post workplan or summary where workers on site are able to review it's content.
    - .2 Materials Source Separation Program (MSSP):
      - .1 Perform all work in accordance with project's MSSP. If one does not exist, provide the following:
        - .1 Provide containers for collection of re-usable and/or recyclable materials.
        - .2 Transport off-site salvaged materials to authorized recycling facility or to users of material for re-use.
    - .3 Disposal of Waste:
      - .1 Disposal of waste, volatile materials, mineral spirits, oil, paint thinner, etc. into waterways, storm or sanitary sewers is prohibited.
    - .4 Storage, Handling and Protection:
      - .1 Store materials for re-use in a secure area as directed by project manager, where they will not be damaged. Provide protection of materials as necessary.
      - .2 Unless otherwise specified, removed materials become the Contractor's property. Contractor shall be responsible for transport & delivery of non-salvageable items to a licensed disposal facility.
- 1.10 Demonstration and Operating and Maintenance Instructions
- .1 Supply tools, equipment and personnel to demonstrate and instruct operating and maintenance personnel in operating, controlling, adjusting, trouble-shooting and servicing of all systems and equipment during regular work hours, prior to acceptance.
  - .2 Where specified elsewhere in Divisions 20, 21, 22, 23 & 25, manufacturers to provide demonstrations and instructions.
  - .3 Use operation and maintenance manual, as-built drawings, audio visual aids, etc. as part of instruction materials.
  - .4 Instruction duration time requirements as specified in appropriate sections.
  - .5 Where deemed necessary, Owner may record these demonstrations on video tape for future reference.
  - .6 Furnish trained instructors to instruct Owner's operating staff in the operation, maintenance and adjustment of all mechanical equipment; and, instruct personnel on any changes to or modifications of any equipment made under terms of the guarantee.

- 1.10 Demonstration and Operating and Maintenance Instructions (Cont'd)
- .7 The instructions shall take place during regular working hours before systems are accepted and turned over to Owner's staff.
- .8 Ensure that the Owner's operating personnel have received and been given opportunity to review the Operating and Maintenance Manuals prior to commencing instruction. Allow two full days on site for review of these manuals with Owner's personnel and for their instruction in operation and maintenance of all mechanical equipment.
- 1.11 Closeout Submittals
- .1 Submit operation and maintenance data for incorporation into manual.
- .2 Operation and maintenance manual (O&M) to be approved by, and final copies deposited with, Engineer before final inspection.
- .3 For all equipment listed in O&M manuals provide a schedule detailing the supplied component, name, address & phone no. of equipment vendor, parts supplier and warranty agent.
- .4 Operation data to include:
- .1 Control schematics for each system including environmental controls.
  - .2 Description of each system and its controls.
  - .3 Description of operation of each system at various loads together with reset schedules and seasonal variances.
  - .4 Operation instruction for each system and each component.
  - .5 Description of actions to be taken in event of equipment failure.
  - .6 Valves schedule and flow diagram.
- .5 Maintenance data shall include:
- .1 Servicing, maintenance, operation and trouble-shooting instructions for each item of equipment.
  - .2 Data to include schedules of tasks, frequency, tools required and task time.
- .6 Performance data to include:
- .1 Equipment manufacturer's performance data sheets with point of operation as left after commissioning is complete.
  - .2 Equipment performance verification test results.
  - .3 Special performance data as specified elsewhere.
  - .4 Testing, adjusting and balancing reports as specified in Section 23 05 93 - Testing, Adjusting and Balancing.
- .7 Approvals:
- .1 Submit electronic format (pdf) copy of draft Operation and Maintenance Manual to Engineer for approval. Submission of individual data will not be accepted unless so directed by Engineer. PDF file to include tabs to allow navigation to each section of the manual.
  - .2 Make changes as required and re-submit as directed by Engineer.
  - .3 Upon acceptance by Engineer submit one (1) electronic format (pdf) and three (3) hardcopies of O&M manuals to Owner.
- .8 Additional data:

- 
- 1.11 Closeout Submittals (Cont'd) .8 (Cont'd)
- .1 Prepare and insert additional data into operation and maintenance manual when the need becomes apparent during demonstrations and instructions specified above.
- 1.12 Acceptable Products .1 Design is based on first manufacturer's name under acceptable products. Subsequent manufacturer's names indicate that those named are acceptable providing they meet specifications and space limitations and are subject to acceptance by Shop Drawing Review.
- 1.13 Shop Drawings and Product Data .1 Submit single electronic (pdf) copy of shop drawings and product data along with transmittal, in accordance with project requirements. Hard copy shop drawings shall not be accepted.
- .2 Shop drawings and product data shall show:
    - .1 Mounting arrangements.
    - .2 Operating and maintenance clearances. eg. access door swing spaces.
  - .3 Shop drawings and product data shall be accompanied by:
    - .1 Detailed drawings of bases, supports, and anchor bolts.
    - .2 Acoustical sound power data, where applicable.
    - .3 Points of operation on full equipment performance curves.
    - .4 Manufacturer to certify as to current model production.
    - .5 Certification of compliance to applicable codes.
  - .4 The information to be indicated on manufacturers' shop drawings submitted for review shall include the following:
    - .1 General arrangement drawings showing component parts. Where the equipment proposed, or a component part thereof, includes modifications to a manufacturers' standard to meet the requirements of a specification, a complete assembly drawing must be submitted.
    - .2 Overall dimensions, roughing-in dimensions and clearance dimensions of all major components.
    - .3 Mounting details and dimensions.
    - .4 Complete certified performance data for the specified application with particular reference to rate of flow, operating pressure and temperatures, entering and leaving conditions of air or fluid, operating weights, operating limitation, electrical characteristics and BHP requirements.
    - .5 Gauge of fabricated material and finish specification.
    - .6 Vibration isolators and resilient hangers stating locations and weight distribution.
    - .7 Electrical wiring diagrams, control panel boards, motor test data, motor starters and controls for electrically-operated equipment furnished by mechanical trades.
  - .5 Review of shop drawings or detail drawings will not relieve the obligation of ensuring that the equipment, materials, or layouts meet the functional requirements of the specifications, and that all necessary mounting space and clearance requirements are met. Thus, the Engineer's review is for assistance only.

- 
- 1.13 Shop Drawings and Product Data (Cont'd) .6 No equipment will be accepted on the job site without shop drawings having been reviewed by the Engineer.
- 1.14 Cleaning .1 Prior to turnover to client, clean interior and exterior of all new systems. Replace all air & hydronic filters on new & modified systems. Vacuum interior of new and modified ductwork and air handling units.
- 1.15 As-built Drawings .1 Site records:
- .1 Mechanical sub-contractor shall mark all changes as work progresses and as changes occur.
  - .2 On a weekly basis, transfer information to record set of documents, revising to show all work as actually installed.
  - .3 Use different colour waterproof ink for each service.
  - .4 Make available for reference purposes and inspection at all times.
- .2 As-built drawings:
- .1 Prior to start of Testing, Adjusting and Balancing (TAB), finalize production of as-built drawings.
  - .2 Identify each drawing in lower right hand corner in letters at least 12 mm high as follows: - "AS BUILT DRAWINGS: THIS DRAWING HAS BEEN REVISED TO SHOW MECHANICAL SYSTEMS AS INSTALLED" (Signature of Contractor) (date).
  - .3 Submit hard copy to Engineer for approval and make corrections as directed.
  - .4 TAB to be performed using as-built drawings.
  - .5 Following approval, submit completed hard copy as-built drawings scanned soft copy with Operating and Maintenance Manuals.
- .3 Submit copies of as-built drawings for inclusion in final TAB report.
- 1.16 Conflict/ Co-ordination Drawings .1 For congested areas, prior to installation the contractor shall prepare interference drawings indicating proposed location of all systems & equipment including ductwork, piping, fans, diffusers, VAV boxes, conduits, lighting fixtures, etc. Prior to installation the contractor shall submit the drawings to the Engineer for review.
- .2 Architectural, structural and electrical outlines may be shown to assist in coordination of work; confirm final arrangements before layout of mechanical work.
- .3 Do not scale.
- .4 Except where dimensioned, drawings indicate general mechanical layouts only.
- .5 Provide field drawings to show relative positions of various services. Obtain approval before beginning work. As a minimum provide layout/coordination drawings for mechanical rooms & corridor ceilings. Drawings must show coordination between all equipment and systems within the given space. All sub-trades to coordinate their work in conjunction with others.

- 1.16 Conflict/  
Co-ordination Drawings  
(Cont'd) .6 Within six (6) weeks of Letter of Intent, mechanical & electrical trades to verify that proposed rooms, shafts, chases, reflected ceiling elevations, etc. provide adequate space for the installation of mechanical & electrical systems. This is to identify if there are any spatial shortcomings and to give adequate time for construction manager, consultants and trades to make any dimensional changes and to make clear to all trades where items are to be installed. Installation and layout will not be on a first come first layout basis.
- .7 If this procedure is not followed the contractor shall be responsible for all modifications required to integrate the systems & equipment.
- .8 When requested by the City, contractor shall provide a single line isometric drawing of the proposed plumbing vent system.
- 1.17 Fees and Permits .1 Pay all fees and obtain all permits, taxes relating to the mechanical scope of work.
- 1.18 Warranty .1 Unless indicated otherwise provide one (1) year warranty starting at substantial completion for all new systems including materials, equipment & labour.
- 1.19 Location of  
Mechanical Equipment .1 Allow for 1500 mm of adjustment for exact location of air handling units, pumps, ducts, piping, etc. at no extra cost or credit.
- 1.20 Electronic Drawings .1 Goodkey, Weedmark & Associates Limited will agree to supply the mechanical drawings in the form of electronic documents for the project to the User for the convenience of the User in carrying out it's work. The User shall sign a License Agreement before drawings will be released.
- 1.21 Cutting, Patching &  
Coring .1 Provide cutting, patching and coring of all walls, ceiling & concrete slabs and other surfaces as required for mechanical work. Check with Owner or Building Management prior to core drilling and cutting of structure regarding building requirements and policies. Provide notification, clearance & protection.
- .2 The following procedure shall be followed for cutting & core drilling:
- .1 Contractor to coordinate and summarize all new cores and openings in building structure. Contractor to investigate on site and locate any existing available hole which may be re-used for new systems.
- .2 Contractor to prepare a layout sketch showing all existing openings & holes and required new openings & holes, with size and locations to the closest grid line in both directions, and submit for review and approval by the architect & structural engineer.
- .3 Structural engineer to provide written report outlining acceptance of the openings, as well as specific requirements for reinforcing at each location.

- 
- 1.21 Cutting, Patching & Coring  
(Cont'd)
- .2 (Cont'd)
- .4 Contractor to proceed with reinforcing tracing as per report and scanning for electrical conduit. Scanning to be completed using ground penetrating Radar (GPR) technology.
- .5 Contractor shall identify at each location prior to coring and cutting the location, direction and layer of each reinforcing bar and conduit.
- .6 Any core or opening where reinforcing steel was cut during the cutting & coring process must be retained on site, and the Contractor must inform the engineer with the following information: size of the reinforcing bar, reinforcing layer location (top steel or bottom slab steel) and direction of the bar (east - west or north - south).
- .3 Patch and make good surfaces cut, damaged or disturbed, to Engineer's approval. Match existing material, colour, finish and texture or as indicated otherwise.
- .4 Provide dust tight screens or partitions to localize dust generating activities and for protection of finished areas of work, workers and public.
- 1.22 Mechanical Cost Breakdown
- .1 Upon award of contract, provide mechanical cost breakdown as per attached schedules for engineer's review and for progress billing purposes.
- .2 Costs such as site trailers, mobilization, shop drawings, engineering, etc. to be included as part of material and labour for each piece of equipment.
- .3 Controls programming and commissioning to be billed upon completion of commissioning.
- .4 Fire protection engineering costs to be included as part of material and labour costs.
- .5 Closeout documents including O&M manuals, as-built drawings, approved air & hydronic TAB reports, seismic letters, NFPA letters, etc. shall constitute 5% of the total mechanical construction cost and shall be approved as a single lump sum line item after submission to and final acceptance by Engineer. Contractor to indicate cost as a separate line item in Progress Billing.
- .6 Proposed billings to be submitted a minimum of fourteen (14) calendar days prior to submission of first billing, for review and approval by Engineer.
- .7 Equipment costs are to be broken down into specific equipment grouping and submitted with proposed billing submittal.
- 1.23 Final Inspection
- .1 Do not request final inspection until:
- .1 Deficiencies are less than 5 items.
- .2 All systems have been tested and are ready for operation.
- .3 All air & water balancing has been completed as applicable.
- .4 The Owner's operating personnel have been instructed in the operation of all systems and equipment.
- .5 The complete operation and maintenance data books have been delivered to the Engineer.

1.23 Final Inspection .1  
(Cont'd)

(Cont'd)

- .6 All inspection certificates have been furnished including but not limited to seismic certification, NFPA (Fire) 13 certification, City's final plumbing inspection.
  - .7 All record drawings have been completed and approved.
  - .8 All fire extinguishers have been installed.
  - .9 The cleaning up is finished in all respects.
  - .10 Upon completion of above, contractor to request in writing for final site review with a minimal 72 hour notification.
- .2 Final installation shall be subject to the approval of the Engineer.

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 20 05 01 - Mechanical General Requirements, all mechanical sections, and all other disciplines related to the project.
- 1.2 Related Documents .1 Drawings and general provisions of Contract, including General and Supplementary Conditions and Division-1 Specification Section, apply to work specified in this section.
- 1.3 Definitions .1 Firestopping: Material or combination of materials used to retain integrity of fire-rated construction by maintaining an effective barrier against the spread of flame, smoke, water and hot gases through penetrations in fire rated wall and floor assemblies.
- 1.4 General Description of the Work of this Section .1 Only tested firestop systems shall be used in specific locations as follows:  
.1 Penetrations for the passage of duct, piping, and other mechanical equipment through fire-rated vertical barriers (walls and partitions), horizontal barriers (floor/ceiling assemblies), and vertical service shaft walls and partitions  
.2 Repetitive plumbing penetrations in fire-rated floor assemblies. Penetrations exist for the installation of tubs, showers, aerators and other plumbing fixtures.  
.2 All penetrations through walls as a result of this work shall be assumed to be 1 hour rated unless otherwise indicated.
- 1.5 Related Work of Other Sections .1 Coordinate work of this section with work of other sections as required to properly execute the work and as necessary to maintain satisfactory progress of the work of other sections, including:  
.1 Section 04 04 99 - Masonry for Minor Works  
.2 Section 07 84 00 - Firestopping  
.3 Section 09 21 16 - Gypsum Board Assemblies
- 1.6 References .1 Test Requirements: ULC-S115-M, "Standard Method of Fire Tests of Through Penetration Fire Stops".  
.2 International Firestop Council Guidelines for Evaluating Firestop Systems Engineering Judgements.  
.3 Inspection Requirements: ASTM E2174-14b, "Standard Practice for On-site Inspection of Installed Fire Stops."  
.4 CAN/ULC-S102-M, Standard Test Method for Surface Burning Characteristics of Building Materials.

- 
- 1.6 References (Cont'd)
- .5 All major building codes: NBC, OBC.
  - .6 NFPA (Fire) 101 - Life Safety Code, 2015 Edition
  - .7 ASTM G21-15, Standard Practice for Determining Resistance of Synthetic Polymeric
- 1.7 Quality Assurance
- .1 Proposed firestop materials and methods shall conform to applicable governing codes having local jurisdiction.
  - .2 Firestop Systems do not reestablish the structural integrity of load bearing partitions/assemblies, or support live loads and traffic. Installer shall consult the structural engineer prior to penetrating any load bearing assembly.
  - .3 For those firestop applications that exist for which no ULC or cUL tested system is available through a manufacturer, a manufacturer's engineering judgement derived from similar ULC or cUL system designs or other tests will be submitted to local authorities having jurisdiction for their review and approval prior to installation. Engineer judgement drawings must follow requirements set forth by the International Firestop Council.
- 1.8 Submittals
- .1 Submit Product Data: Manufacturer's specifications and technical data for each material including the composition and limitations, documentation of ULC or cUL firestop systems to be used and manufacturer's installation instructions to comply with Division 01.
  - .2 Manufacturer's engineering judgement identification number and drawing details when no ULC or cUL system is available for an application. Engineer judgement must include both project name and contractor's name who will install firestop system as described in drawing.
  - .3 Submit material safety data sheets provided with product delivered to job-site.
  - .4 Submit a complete firestopping and smoke seal schedule. Schedule is to include complete details, cut sheets, system descriptions and location of each proposed firestopping & smoke seal application.
- 1.9 Installer Qualifications
- .1 Engage an experienced Installer who is certified, licensed, or otherwise qualified by the firestopping manufacturer as having been provided the necessary training to install manufacturer's products per specified requirements. A manufacturer's willingness to sell its firestopping products to the Contractor or to an Installer engaged by the Contractor does not in itself confer qualification on the buyer.
- 1.10 Delivery, Storage, and Handling
- .1 Deliver materials undamaged in manufacturer's clearly labelled, unopened containers, identified with brand, type, and ULC or cUL label where applicable.

- 1.10 Delivery, Storage, and Handling (Cont'd)
- .2 Coordinate delivery of materials with scheduled installation date to allow minimum storage time at job-site.
  - .3 Store materials under cover and protect from weather and damage in compliance with manufacturer's requirements.
  - .4 Comply with recommended procedures, precautions or remedies described in material safety data sheets as applicable.
  - .5 Do not use damaged or expired materials.
- 1.11 Project Conditions
- .1 Do not use materials that contain flammable solvents.
  - .2 Scheduling:
    - .1 Schedule installation of CAST IN PLACE firestop devices after completion of floor formwork, metal form deck, or composite deck but before placement of concrete.
    - .2 Schedule installation of Drop-In firestop devices after placement of concrete but before installation of the pipe penetration. Diameter of sleeved or cored hole to match the listed system for the device.
    - .3 Schedule installation of other firestopping materials after completion of penetrating item installation but prior to covering or concealing of openings.
  - .3 Verify existing conditions and substrates before starting work. Correct unsatisfactory conditions before proceeding.
  - .4 Weather conditions: Do not proceed with installation of firestop materials when temperatures exceed the manufacturer's recommended limitations for installation printed on product label and product data sheet.
  - .5 During installation, provide masking and drop cloths to prevent firestopping materials from contaminating any adjacent surfaces.

## **PART 2 - PRODUCTS**

- 2.1 Firestopping, General
- .1 Provide firestopping composed of components that are compatible with each other, the substrates forming openings, and the items, if any, penetrating the firestopping under conditions of service and application, as demonstrated by the firestopping manufacturer based on testing and field experience.
  - .2 Provide components for each firestopping system that are needed to install fill material. Use only components specified by the firestopping manufacturer and approved by the qualified testing agency for the designated fire-resistance-rated systems.
  - .3 Firestopping Materials are either "cast-in-place" (integral with concrete placement) or "post installed." Provide cast-in-place firestop devices prior to concrete placement.

- 2.1 Firestopping, General (Cont'd) .4 Penetrations in Smoke Barriers: Provide firestopping with ratings determined in accordance with ULC S-115.
- .1 L-Rating: Not exceeding 25.4 L/s/sq.m (5.0 cfm/sq.ft.) of penetration opening at both ambient and elevated temperatures.
- .5 Mold Resistance: Provide penetration firestopping with mold and mildew resistance rating of 0 as determined by ASTM G21.
- 2.2 Acceptable Materials .1 Hilti (Canada) Corporation (1-800-363-4458), 3M (1-800-328-1687), or as alternative materials approved by addendum in accordance with Instructions to Tenderers.
- 2.3 Materials .1 Use only firestop products that have been ULC or cUL tested for specific fire-rated construction conditions conforming to construction assembly type, penetrating item type, annular space requirements, and fire-rating involved for each separate instance.
- .2 Pre-Installed firestop devices for use with non-combustible and combustible pipes (closed and open systems) penetrating concrete floors and/or gypsum walls.
- .3 Sealants or caulking materials for use with non-combustible items including steel pipe, copper pipe, rigid steel conduit and electrical metallic tubing (EMT).
- .4 Sealants or caulking materials for use with sheet metal ducts.
- .5 Intumescent sealants or caulking materials for use with combustible items (penetrates consumed by high heat and flame) including insulated metal pipe, PVC jacketed, flexible cable or cable bundles and plastic pipe.
- .6 Firestop collar or wrap devices attached to assembly around combustible plastic pipe (closed and open piping systems) tested to 50 Pa. differential.
- .7 Materials used for large size/complex penetrations made to accommodate cable trays, multiple steel and copper pipes, electrical busways in raceways.
- .8 Non curing, re-penetrable materials used for large size/complex penetrations made to accommodate cable trays, multiple steel and copper pipes, electrical busways in raceways.
- .9 For blank openings made in fire-rated wall or floor assemblies, where future penetration of pipes, conduits, or cables is expected.

2.3 Materials  
(Cont'd)

- .10 For penetrations through a Fire Separation wall provide a firestop system with a "F" Rating as determined by ULC or cUL as indicated below:

Fire Resistance Rating of Separation	Required ULC or cUL "F" Rating of Firestopping Assembly
30 minutes	20 minutes
45 minutes	45 minutes
1 hour	45 minutes
1.5 hours	1 hour
2 hours	1.5 hours
3 hours	2 hours
4 hours	3 hours

For combustible pipe penetrations through a Fire Separation provide a firestop system with a "F" Rating as determined by ULC or cUL which is equal to the fire resistance rating of the construction being penetrated.

- .11 For penetrations through a Fire Wall or horizontal Fire Separation provide a firestop system with a "FT" Rating as determined by ULC or cUL which is equal to the fire resistance rating of the construction being penetrated.

**PART 3 - EXECUTION**

3.1 Preparation

- .1 Verification of Conditions: Examine areas and conditions under which work is to be performed and identify conditions detrimental to proper or timely completion.
- .1 Verify penetrations are properly sized and in suitable condition for application of materials.
  - .2 Surfaces to which firestop materials will be applied shall be free of dirt, grease, oil, rust, laitance, release agents, water repellents, and any other substances that may affect proper adhesion.
  - .3 Ensure all service lines are in place, tested and acceptable to the authority having jurisdiction, prior to application of fire stopping and smoke seal.
  - .4 Provide masking and temporary covering to prevent soiling of adjacent surfaces by firestopping materials.
  - .5 Comply with manufacturer's recommendations for temperature and humidity conditions before, during and after installation of firestopping.
  - .6 Do not proceed until unsatisfactory conditions have been corrected.

3.2 Coordination

- .1 Coordinate construction of openings and penetrations to ensure that the fire stop systems are installed according to specified requirements.
- .2 Coordinate sizing of sleeves, openings, core-drilled holes, or cut openings to accommodate through-penetration fire stop systems.
- .3 Coordinate fire stopping with other trades so that obstructions are not placed in the way prior to the installation of the fire stop systems.

- 3.3 Installation
- .1 Regulatory Requirements: Install firestop materials in accordance with ULC Fire Resistance Directory or UL Products Certified for Canada (cUL) Directory or Omega Point Laboratories Directory.
  - .2 Manufacturer's Instructions: Comply with manufacturer's instructions for installation of through-penetration and construction joint materials.
    - .1 Seal all holes or voids made by penetrations to ensure an air and water resistant seal.
    - .2 Consult with mechanical engineer, project manager, and damper manufacturer prior to installation of ULC or cUL firestop systems that might hamper the performance of fire dampers as it pertains to duct work.
    - .3 Protect materials from damage on surfaces subjected to traffic.
- 3.4 Field Quality Control
- .1 Examine sealed penetration areas to ensure proper installation before concealing or enclosing areas.
  - .2 Keep areas of work accessible until inspection by applicable code authorities.
  - .3 Inspection of through-penetration firestopping shall be performed in accordance with ASTM E2174, "Standard Practice for On-Site Inspection of Installed Fire Stops" or other recognized standard.
  - .4 Perform under this section patching and repairing of firestopping caused by cutting or penetrating of existing firestop systems already installed by other trades.
- 3.5 Identification & Documentation
- .1 The firestop contractor is to supply documentation for each single application addressed. This documentation shall identify each penetration and joint location on the entire project.
  - .2 The Documentation Form for through penetrations is to include:
    - .1 A Sequential Location Number
    - .2 The Project Name
    - .3 Date of Installation
    - .4 Detailed description of the penetrations location
    - .5 Tested System or Engineered Judgement Number
    - .6 Type of assembly penetrated
    - .7 A detailed description of the size and type of penetrating item
    - .8 Size of opening
    - .9 Number of sides of assemblies addressed
    - .10 Hourly rating to be achieved
    - .11 Installers Name
  - .3 Submit the record document to the Engineer at the completion of the project.
  - .4 Identify through-penetration firestop systems with pressure-sensitive, self-adhesive, preprinted vinyl labels. Attach labels permanently to surfaces of penetrated construction on both sides of each firestop system installation where labels will be visible to anyone seeking to remove penetrating items or firestop systems. Include the following information on labels:

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 20 05 01 - Mechanical General Requirements, all mechanical sections, and all other disciplines related to the project.
- 1.2 Shop Drawings .1 Submit shop drawings in accordance with Section 20 05 01 - Mechanical General Requirements.
- .2 Submit catalogue details for each type of door illustrating profiles, dimensions and methods of assembly.

## **PART 2 - PRODUCTS**

- 2.1 Access Doors .1 Supply and install as necessary to gain access to all concealed mechanical equipment for operating, inspecting, adjusting, servicing.
- .2 Sizes: Except as indicated otherwise, to be minimum sizes as follows:  
.1 For body entry: 600 x 600 mm (24" x 24").  
.2 For hand entry: 300 x 300 mm (12" x 12").
- .3 Construction: Rounded safety corners, concealed hinges, screwdriver latch, anchor straps, able to open 180°.
- .4 Materials  
.1 Tiled or marble surfaces and other special areas: Stainless steel with brushed satin or polished finish as directed by Consultant.  
.2 All other areas: Prime coated steel.
- .5 Fire Rating  
.1 Access doors fire rating to match that of wall, ceiling or floor the access door is installed in. Coordinate with architectural drawings.
- 2.2 Exclusions .1 Lay-in tile ceilings. In this instance, use unobtrusive identification locators.

## **PART 3 - EXECUTION**

- 3.1 Installation .1 Installation in accordance with Manufacturer's installation instructions for particular surface.

3.2 Location .1 Location: Ensure that equipment is clearly within view and accessible for operating, inspecting, adjusting, servicing without the need for special tools.

- END OF SECTION -

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 20 05 01 - Mechanical General Requirements, all mechanical sections, and all other disciplines related to the project.
- 1.2 References .1 American Society of Mechanical Engineers (ASME)  
.1 ASME B16.15-2013, Cast Bronze Threaded Fittings, Classes 125 and 250.  
.2 ASME B16.18-2012, Cast Copper Alloy Solder Joint Pressure Fittings.  
.3 ASME B16.22-2013, Wrought Copper and Copper Alloy Solder-Joint Pressure Fittings.  
.4 ASME B16.24-2016, Cast Copper Alloy Pipe Flanges and Flanged Fittings, Class 150 and 300.
- .2 American Society for Testing and Materials (ASTM)  
.1 ASTM A307-14e1, Standard Specification for Carbon Steel Bolts and Studs, 60 000 PSI Tensile Strength.  
.2 ASTM B88M-16, Specification for Seamless Copper Water Tube (Metric).
- .3 American Water Works Association (AWWA)  
.1 AWWA C111/A21.11-17, Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.
- .4 Canadian Standards Association (CSA)  
.1 CSA B242-05 (R2016), Groove- and Shoulder-Type Mechanical Pipe Couplings.
- 1.3 Product Data .1 Submit product data in accordance with Section 20 05 01 - Mechanical General Requirements.

## **PART 2 - PRODUCTS**

- 2.1 Piping .1 Domestic hot, cold and recirculation systems, within building.  
.1 Above ground: copper tube, hard drawn, type L: to ASTM B88M.  
.2 Buried or embedded: copper tube, soft annealed, type K: to ASTM B88M, in long lengths and with no buried joints.
- .2 Piping to be of all North American manufacturer.
- 2.2 Fittings .1 Bronze pipe flanges and flanged fittings, Class 150 and 300: to ASME B16.24.
- .2 Cast bronze threaded fittings, Class 125 and 250: to ASME B16.15.

<u>2.2 Fittings (Cont'd)</u>	.3	Cast copper, solder type: to ASME B16.18.
	.4	Wrought copper and copper alloy, solder type: to ASME B16.22.
	.5	Fittings to be of all North American manufacturer.
<u>2.3 Joints</u>	.1	Rubber gaskets, 1.6 mm thick: to AWWA C111/A21.11.
	.2	Bolts, nuts, hex head and washers: to ASTM A307, heavy series.
	.3	Solder: 95/5 lead free solder. No lead content in excess of 0.2%.
	.4	Teflon tape: for threaded joints.
	.5	Dielectric connections between dissimilar metals: dielectric fitting to ASTM F492, complete with thermoplastic liner. Bronze or brass ball valves are an acceptable dielectric fitting where applicable.
<u>2.4 Valves</u>	.1	Refer to Section 23 05 23 - Valves.
<b><u>PART 3 - EXECUTION</u></b>		
<u>3.1 Installation</u>	.1	Install in accordance with Canadian Plumbing Code, Provincial Plumbing Code and local authority having jurisdiction.
	.2	Cut square, ream and clean tubing and tube ends, clean recesses of fittings and assemble without binding.
	.3	Install pipe work in accordance with Section 23 05 05 - Installation of Pipe Work, supplemented as specified herein.
	.4	Assemble piping using fittings manufactured to ANSI standards.
	.5	Install DCW piping below and away from DHW and DHWR and other hot piping so as to maintain temperature of cold water as low as possible.
	.6	Connect to fixtures and equipment in accordance with manufacturer's written instructions unless otherwise indicated.
	.7	Buried tubing: .1 Lay in well compacted washed sand in accordance with AWWA Class B bedding. .2 Bend tubing without crimping or constriction. No fittings permitted below grade.
	.8	Install isolation valves at all branch take-offs and to isolate each piece of equipment, and as indicated.

- 
- 3.2 Pressure Tests .1 Refer to Section 23 05 05 - Installation of Pipework.  
.2 Test pressure: greater of 1½ times maximum system operating pressure or 860 kPa.
- 3.3 Flushing and Cleaning .1 Flush entire system for 8 h. Ensure outlets flushed for 2 h. Let stand for 24 h, then draw one sample off longest run. Submit to testing laboratory to verify that system is clean. Let system flush for additional 2 h, then draw off another sample for testing. Submit test results to Engineer.
- 3.4 Pre-Start-up Inspections .1 Systems to be complete, prior to flushing, testing and start-up.  
.2 Verify that system can be completely drained.  
.3 Ensure that pressure booster systems are operating properly.  
.4 Ensure that air chambers, expansion compensators are installed properly.
- 3.5 Disinfection .1 Flush out, disinfect and rinse system to requirements of authority having jurisdiction and to the approval of Engineer.  
.2 Upon completion, provide laboratory test reports on water quality for Engineer approval.
- 3.6 Start-up .1 Timing: Start up after:  
.1 Pressure tests have been completed.  
.2 Disinfection procedures have been completed.  
.3 Certificate of static completion has been issued.  
.2 Provide continuous supervision during start-up.  
.3 Start-up procedures:  
.1 Establish circulation and ensure that air is eliminated.  
.2 Check pressurization to ensure proper operation and to prevent water hammer, flashing and/or cavitation.  
.4 Rectify start-up deficiencies.
- 3.7 Performance Verification .1 Timing:  
.1 After pressure and leakage tests and disinfection completed, and certificate of completion has been issued by authority having jurisdiction.  
.2 Procedures:  
.1 Verify that flow rate and pressure meet Design Criteria.

- 3.7 Performance Verification (Cont'd)
- .2 (Cont'd)
    - .2 TAB DHWR in accordance with Section 23 05 93 - Testing Adjusting and Balancing (TAB) of Mechanical Systems.
    - .3 Adjust pressure regulating valves while withdrawal is maximum and inlet pressure is minimum.
    - .4 Verify performance of temperature controls.
    - .5 Verify compliance with safety and health requirements.
    - .6 Check for proper operation of water hammer arrestors. Run 10% of outlets for 10 seconds, then shut off water immediately. If water hammer occurs, replace water hammer arrestor or re-charge air chambers. Repeat for outlets and flush valves.
    - .7 Confirm water quality consistent with supply standards, verifying that no residuals remain as a result of flushing and/or cleaning.
  - .3 Reports:
    - .1 In accordance with Section 20 05 01 - Mechanical General Requirements: Reports, using report forms as specified in Section 20 05 01 - Mechanical General Requirements: Report Forms and Schematics.
    - .2 Include certificate of water flow and pressure tests conducted on incoming water service, demonstrating adequacy of flow and pressure.

- END OF SECTION -

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 20 05 01 - Mechanical General Requirements, all mechanical sections, and all other disciplines related to the project.
- 1.2 References .1 American Society for Testing and Materials (ASTM)
- .1 ASTM B32-08 (R2014), Specification for Solder Metal.
  - .2 ASTM B306-13, Specification for Copper Drainage Tube (DWV).
  - .3 ASTM C564-14, Specification for Rubber Gaskets for Cast Iron Soil Pipe and Fittings.
  - .4 ASTM C1540-15, Standard Specification for Heavy Duty Shielded Couplings Joining Hubless Cast Iron Soil Pipe and Fittings.
- .2 Canadian Standards Association (CSA)
- .1 CSA B70-12 (R2016), Cast Iron Soil Pipe, Fittings and Means of Joining.
  - .2 CSA B125-01, Plumbing Fittings.
- .3 Cast Iron Soil Pipe Institute (CISPI)
- .1 CISPI 310-04, Specification for coupling for use in connection with hubless cast iron soil pipe and fittings for sanitary and storm drain, waste, and vent piping applications.

## **PART 2 - PRODUCTS**

- 2.1 Copper Tube and Fittings .1 Above ground sanitary, storm and vent Type DWV to: ASTM B306.
- .1 Fittings.
    - .1 Cast brass: to CSA B125.
    - .2 Wrought copper: to CSA B125.
  - .2 Solder: 95/5, lead free, to ASTM B32, type 50A.
- 2.2 Cast Iron Piping and Fittings .1 Buried sanitary and vent minimum NPS 3, to: CSA B70.
- .1 Mechanical joints.
    - .1 Provide hubless soil pipe couplings designated as Heavyweight, constructed of extra wide 4 to 6 band corrugated type 304 stainless steel bands, with heavy duty worm drive clamps.
    - .2 Flanged gasket to be made of neoprene rubber, meeting ASTM C564 and unit to meet CISPI 310 and ASTM C1540 standards.
    - .3 Tightened to 80 in. lbs. torque.
    - .4 Acceptable materials: Mission Rubber Company.
  - .2 Provide proper transition fittings to tie into existing hub and spigot type pipe when found on site.

- 2.2 Cast Iron Piping and Fittings  
(Cont'd)
- .2 Above ground sanitary, storm and vent: to CSA B70.
- .1 Mechanical joints.
- .1 Provide hubless soil pipe couplings designated as Heavyweight, constructed of extra wide 4 to 6 band corrugated type 304 stainless steel bands, with heavy duty worm drive clamps.
- .2 Flanged gasket to be made of neoprene rubber, meeting ASTM C564 and unit to meet CISPI 310 and ASTM C1540 standards.
- .3 Tightened to 80 in. lbs. torque.
- .4 Acceptable materials: Mission Rubber Company.

### **PART 3 - EXECUTION**

- 3.1 Installation
- .1 Install in accordance with Canadian Plumbing Code, Provincial Plumbing Code and local authority having jurisdiction.
- .2 Allow for locating of existing buried sanitary piping prior to excavating for connection of new services.
- .3 Bedding and backfilling should be in accordance with [City of Ottawa] standards and specifications. Install buried pipe on 150 mm (6") bed of compacted clean Granular A bedding compacted to 95% (min.) dry proctor density, shaped to accommodate hubs and fittings, to line and grade as indicated. The material should be placed in maximum 300 mm thick lifts. (If trench bottom is unstable, bring to Engineers attention before bedding is laid). Limit vertical deflection and increase pipe support by compacting soil in both directions away from the pipe toward trench walls. Initial backfill to begin at springline of pipe to 300 mm (12") above pipe using compacted clean Granular A bedding compacted to 95% (min.) dry proctor density. Final backfill shall be in accordance with Geotechnical Report and as minimum utilize clean Granular A compacted to 95% dry proctor density in 300 mm thick lifts. Bedding and backfill shall be provided by this division and in accordance with Div. 02 - Site Work.
- .4 Install above ground piping parallel and close to walls and ceilings to conserve headroom and space, and to grade as indicated.
- .5 Urinal waste pipe & fittings shall be DWV PVC equivalent to IPEX System 15 in accordance with specification Section 22 13 18 - Drainage Waste and Vent - Plastic. Extend plastic piping up to combined waste from adjacent lavatory or other plumbing fixtures allowing dilution of waste.
- .6 On pumped discharge, cast iron with mechanical joint shall not be allowed. (Use Type L copper with DWV fittings or galvanized steel above ground only.)
- 3.2 Testing
- .1 Test in accordance with OBC Part 7 requirements.
- .2 Hydraulically test to verify grades and freedom from obstructions.

3.3 Performance  
Verification

- .1 Cleanouts:
  - .1 Ensure accessible and that access doors are correctly located.
  - .2 Open, cover with linseed oil and re-seal.
  - .3 Verify that cleanout rods can probe as far as the next cleanout, at least.
- .2 Test to ensure traps are fully and permanently primed.
- .3 Storm water drainage:
  - .1 Verify domes are secure.
  - .2 Ensure weirs are correctly sized and installed correctly.
  - .3 Verify provisions for movement of roof system.
- .4 Ensure that fixtures are properly anchored, connected to system and effectively vented.
- .5 Affix applicable label (storm, sanitary, vent, pump discharge etc.) c/w directional arrows every floor or 4.5 m (whichever is less).

- END OF SECTION -

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 20 05 01 - Mechanical General Requirements, all mechanical sections, and all other disciplines related to the project.
- 1.2 References .1 American Society for Testing and Materials (ASTM)
- .1 ASTM D2564-12, Specification for Solvent Cements for Poly (Vinyl-Chloride) (PVC) Plastic Piping Systems.
  - .2 Canadian Standards Association (CSA)
    - .1 CSA B1800-15, Thermoplastic Nonpressure Piping Compendium.
  - .3 Underwriters Laboratories of Canada (ULC)
    - .1 CAN/ULC S102.2-10, Method of Test for Surface Burning Characteristics of Flooring, Floor Coverings, and Miscellaneous Materials and Assemblies.
    - .2 CAN/ULC S115-11, Standard Method of Fire Tests of Firestop Systems.

## **PART 2 - PRODUCTS**

- 2.1 Piping and Fittings .1 DWV PVC (Polyvinyl Chloride):
- .1 Application: below grade sanitary, storm & vent piping & fittings and above grade where combustible piping is permitted excluding OBC 3.2.6 (High-rise) applications and ceiling plenums.
  - .2 Pipe and Fittings: Drain, waste and vent pipe and fittings shall be certified to CSA B181.2. When combustible pipe and fittings are used in buildings required to be of noncombustible construction, they shall be listed by ULC to the Standard CAN/ULC S102.2 and clearly marked with the certification logo indicating a flame-spread rating not exceeding 25.
  - .3 Acceptable material: IPEX System 15 DWV.
- .2 Fire & smoke resistant coated DWV PVC (Polyvinyl Chloride) piping & fittings:
- .1 Application: Above grade sanitary, storm & vent piping & fittings where combustible piping is permitted including OBC 3.2.6 High-rise applications and within ceiling plenums.
  - .2 Pipe and Fittings: Drain, waste and vent pipe and fittings shall be certified to CSA B181.2 and when used in noncombustible construction, high-rise buildings and air plenums, they shall be tested and listed in accordance with CAN/ULC S102.2 and clearly marked with the certification logo indicating a flame-spread rating not exceeding 25 and a smoke-developed classification not exceeding 50.
  - .3 Acceptable material: IPEX System XFR 15/50 PVC-DWV.

- 2.1 Piping and Fittings  
(Cont'd)
- .3 Firestopping Devices:
- .1 All combustible pipe penetrations shall comply with the requirements described in the O.B.C. 3.1.9.4.(1) through (8) and provide a firestop system that has been Tested and Listed to the test Standard CAN/ULC S115 with a pressure differential of 50 Pa. In addition, the manufacturer shall provide a documentation confirming compliance with the Listed system.
- .4 Solvent Welding:
- .1 Solvent cements shall be CSA certified and meet the requirements of ASTM D2564. One-step cement may be used for sizes from NPS 40 to 150. Two-step cement must be used in conjunction with primer on larger pipe sizes. Proper solvent cementing procedures must be followed at all times.
- .2 The manufacturer, shall be consulted prior to installation for proper solvent welding procedures and proper solvent cement requirements.
- .5 Expansion/Contraction:
- .1 Compensation shall be made to accommodate expansion/contraction on the drainage system. It is recommended that there be compensation on every second floor for the vertical piping system. Consult pipe system manufacturer for specific details regarding approved compensation methods.
- .6 Compatibility:
- .1 To ensure compatibility, performance and material quality, all pipe and fitting drainage system shall be produced by the same manufacturer.
- .7 Quality Control:
- .1 The manufacturer of the pipe and fitting system shall be contacted prior to the installation to obtain precise installation instructions. Site meetings shall be arranged and include, the Contractor, Manufacturer and Building Inspector.

### **PART 3 - EXECUTION**

- 3.1 Installation
- .1 Install in accordance with Canadian Plumbing Code, Provincial Plumbing Code and local authority having jurisdiction.
- .2 Allow for locating of existing buried sanitary piping prior to excavating for connection of new services.
- .3 Bedding and backfilling should be in accordance with City of Ottawa standards and specifications. Install buried pipe on 150 mm (6") bed of compacted clean Granular A bedding compacted to 95% (min.) dry proctor density, shaped to accommodate hubs and fittings, to line and grade as indicated. The material should be placed in maximum 300 mm thick lifts. (If trench bottom is unstable, bring to Engineers attention before bedding is laid). Limit vertical deflection and increase pipe support by compacting soil in both directions away from the pipe toward trench walls. Initial backfill to begin at springline of pipe to 300 mm (12") above pipe using compacted clean Granular A bedding compacted to 95% (min.) dry proctor density. Final backfill shall be in accordance with Geotechnical Report (if available) and as minimum utilize clean Granular A compacted to 95% dry proctor density in 300 mm thick lifts. Bedding and backfill shall be provided by this division.

- 3.1 Installation (Cont'd) .4 Plastic pipe shall not be used on pumped sanitary & storm discharge.
- 3.2 Testing .1 Test in accordance with OBC Part 7 requirements.
- .2 Pressure test buried systems before backfilling.
- .3 Hydraulically test to verify grades and freedom from obstructions.
- .4 Video Testing:
- .1 Provide video scanning of underground sanitary and storm piping for contractor's review and approval prior to pouring of concrete. Repair deficiencies and re-scan as required. Submit final video to Engineer for record.
- .2 Flush & video scan sanitary and storm piping for contractor's review and approval prior to building turnover. Repair deficiencies and re-scan as required. Submit final video to Engineer for record.
- 3.3 Performance Verification .1 Cleanouts:
- .1 Ensure accessible and that access doors are correctly located.
- .2 Open, cover with linseed oil and re-seal.
- .3 Verify cleanout rods can probe as far as the next cleanout, at least.
- .2 Test to ensure traps are fully and permanently primed.
- .3 Storm water drainage:
- .1 Verify domes are secure.
- .2 Ensure weirs are correctly sized and installed correctly.
- .3 Verify provisions for movement of roof system.
- .4 Ensure that fixtures are properly anchored, connected to system and effectively vented.
- .5 Affix applicable label (storm, sanitary, vent, pump discharge etc.) c/w directional arrows every floor or 4.5 m (whichever is less).

- END OF SECTION -

- 1.3 Submittals .1 Submit shop drawings and product data in accordance with Section 20 05 01 - Mechanical General Requirements.  
.2 For shop drawings, indicate dimensions, construction details and materials.  
.3 For product data, indicate dimensions, construction details and materials for items specified herein.
- 1.4 Closeout Submittals .1 Provide maintenance data for incorporation into manual specified in Section 20 05 01 - Mechanical General Requirements.  
.2 Data to include:  
.1 Description of plumbing specialties and accessories, giving manufacturers name, type, model, year and capacity.  
.2 Details of operation, servicing and maintenance.  
.3 Recommended spare parts list.

## **PART 2 - PRODUCTS**

- 2.1 Floor Drains .1 Floor drains: to CSA B79. Refer to schedule on drawings.

- 2.2 Cleanouts .1 Cleanout plugs: heavy cast iron male ferrule with brass screws and threaded brass or bronze plug. Sealing-caulked lead seat or neoprene gasket.  
.1 Acceptable material: Watts, J.R. Smith & Zurn Z-1449.
- .2 Access covers:  
.1 Wall access: face or wall type, stainless steel round cover with flush head securing screws, bevelled edge frame complete with anchoring lugs.  
Acceptable material: Watts, Zurn ZANB-1463 (wall), ZANB-1460 (floor).  
.2 Floor access: round cast iron body and frame with adjustable secured nickel bronze top, and.  
.1 Plugs: bolted bronze with neoprene gasket.  
.2 Cover for unfinished concrete floors: nickel bronze round, gasket, vandal-proof screws. Acceptable material: Watts, Zurn ZX-1612-BP.  
.3 Cover for terrazzo finish: polished nickel bronze with recessed cover for filling with terrazzo, vandal-proof locking screws. Acceptable material: Watts, Zurn ZX-1400-BP-Z.  
.4 Cover for tile and linoleum floors: polished nickel bronze with recessed cover for linoleum or tile infill, complete with vandal-proof locking screws. Acceptable material: Watts, Zurn ZN-1602-BP-VP light traffic.
- 2.3 Trap Seal Primers .1 Type 1: for use on urinal or water closet cold water line.  
.1 Pressure drop activated type, all brass construction with "O" ring seals, 12 mm (NPT ½) male inlet & 12 mm (NPT ½) female outlet drip line connection with viewing holes, and removable fitter screen. Trap primer shall have no adjustment. Operating range shall be 138 kPa (20 psi) to 861 kPa (125 psi). Operates on pressure drop of Minimum 20 kPa (3 psi). One (1) to six (6) drain taps per unit.  
.2 Identify on as-built drawings the location of each trap seal primer.  
.3 Ensure all trap seal primers are accessible for maintenance purposes and are connected to urinal or water closet cold water line. Trap line shall be from top of cold water line and include a service valve. All to be serviceable from access doors.  
.4 Acceptable materials: Mifab M-500, Watts, Zurn Z-1022.
- .2 Type 2: for use on lavatory cold water line.  
.1 Brass trap seal primer with removable poppet, integral vacuum breaker, gasketed access cover 13 NPT (½") threaded inlet and outlet connections, complete with 13 NPT (½") sweat connection adapters and 13 NPT (½") drip line connection.  
.2 Trap seal primers are listed with I.A.P.M.O. and CSA and are tested and certified to the ASSE 1018.  
.3 Trap seal primers shall be installed minimum 305 mm (12") above the grid of a floor drain or flood level rim of equipment served.  
.4 Operating range for trap seal primers is 138 kPa (20 psi) to 861 kPa (125 psi). Operates on pressure drop of Minimum 14 kPa (2 psi).  
.5 Acceptable material: PPP Prime-pro, Mifab MI-TSP-3, Watts, Zurn.
- 2.4 Water Hammer Arrestors .1 Copper construction, bellows or piston type: to PDI-WH201.

<u>2.4 Water Hammer Arrestors (Cont'd)</u>	.2	Acceptable material: Watts, J.R. Smith & Zurn Z-1700.
<u>2.5 Vacuum Breakers</u>	.1	To CSA B64.
	.2	Atmospheric vacuum breaker: .1 Acceptable material: Zurn Model 35 (chrome finish), Watts.
	.3	Hose connection vacuum breaker: .1 Acceptable material: Zurn Model BFP-9, Watts.
	.4	Laboratory faucet intermediate vacuum breaker: .1 Acceptable material: Zurn Model 730 to be installed at end of spout, Watts.
<u>2.6 Hose Bibbs and Sediment Faucet</u>	.1	Bronze construction complete with integral back flow preventer, hose thread spout, cap chain, replaceable composition disc, and chrome plated in finished areas.
	.2	Acceptable material: Watts.
<u>2.7 Strainers</u>	.1	860 kPa (125 psi), Y type with 20 mesh, monel, bronze or stainless steel removable screen.
	.2	NPS 2 and under, bronze body, screwed ends, with brass cap. .1 Acceptable material: Watts, Wilkins S-XL.
<u>2.8 Under Sink Thermostatic Mixing Valve</u>	.1	Thermostatic Mixing Valve: .1 The valve shall be ASSE standard 1070 and IAPMO CUPC listed and control the temperature of the hot water. It shall have a lead free brass 4-port, "H" pattern body. Lead free* under counter thermostatic valves shall comply with codes and standards, where applicable, requiring reduced lead content. The valve shall include integral check valves, integral screens and an adjustment nut with locking feature. The valve shall be provided with 10 mm (3/8"), male compression or quick-connect fittings. .2 Acceptable material: Watts series LFUSG-B or as scheduled.

### **PART 3 - EXECUTION**

<u>3.1 Installation</u>	.1	Install in accordance with Canadian Plumbing Code, and local authority having jurisdiction.
	.2	Install in accordance with manufacturer's instructions and as specified.

- 3.2 Floor Drains .1 Floor drains to be installed at lowest point in floor and placed to ensure floor finishing is flush/slightly higher than strainer. Contractor to chip concrete around drains, lower assembly, patch concrete and provide floor finish should the installed elevation be unacceptable to Engineer.
- .2 Contractor to provide suitable means of protecting floor drains and cleanouts from damage during construction. Contractor to be responsible for turning over facility to Owner with floor drains and strainers in new condition. Damaged material shall be replaced with new at contractor's expense.
- 3.3 Cleanouts .1 In addition to those required by code, and as indicated, install at base of soil and waste stacks, and rainwater leaders.
- .2 Bring cleanouts to wall or finished floor unless serviceable from below floor.
- .3 Building drain cleanout and stack base cleanouts: line size to maximum NPS4.
- 3.4 Water Hammer Arrestors .1 Install on branch supplies to fixtures or group of fixtures.
- 3.5 Hose Bibbs and Sediment Faucets .1 Install at bottom of risers, at low points to drain systems, and as indicated.
- 3.6 Trap Seal Primers .1 Install for floor drains and elsewhere, as indicated.
- .2 Install on cold water supply to nearest frequently used plumbing fixture, in concealed space, to approval of Engineer.
- .3 Install soft copper tubing to floor drain.
- .4 Identify on as-built drawings the location of each trap seal primer.
- .5 Ensure all trap seal primers are accessible for maintenance purposes. Install access doors.
- 3.7 Strainers .1 Install with sufficient room to remove basket.
- 3.8 Start-up .1 Timing: Start-up only after:
- .1 Pressure tests have been completed.
- .2 Disinfection procedures have been completed.
- .3 Certificate of static completion has been issued.
- .4 Water treatment systems operational.

- 3.8 Start-up .2 Provide continuous supervision during start-up.  
(Cont'd)
- 3.9 Testing and Adjusting .1 Timing:  
.1 After start-up deficiencies rectified.  
.2 After certificate of completion has been issued by authority having jurisdiction.
- .2 Application tolerances:  
.1 Pressure at fixtures: +/- 70 kPa.  
.2 Flow rate at fixtures: +/- 20%.
- .3 Adjustments:  
.1 Verify that flow rate and pressure meet design criteria.  
.2 Make adjustments while flow rate or withdrawal is (1) maximum and (2) 25% of maximum and while pressure is (1) maximum and (2) minimum.
- .4 Floor drains:  
.1 Verify operation of trap seal primer.  
.2 Prime, using trap primer. Adjust flow rate to suit site conditions.  
.3 Check operations of flushing features.  
.4 Check security, accessibility, removeability of strainer.  
.5 Clean out baskets.
- .5 Access doors:  
.1 Verify size and location relative to items to be accessed.
- .6 Cleanouts:  
.1 Verify covers are gas-tight, secure, yet readily removable.
- .7 Water hammer arrestors:  
.1 Verify proper installation of correct type of water hammer arrester.
- .8 Strainers:  
.1 Clean out repeatedly until clear.  
.2 Verify accessibility of cleanout plug and basket.  
.3 Verify that cleanout plug does not leak.

- END OF SECTION -

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 20 05 01 - Mechanical General Requirements, all mechanical sections, and all other disciplines related to the project.
- 1.2 References .1 Canadian Standards Association (CSA)
- .1 CAN/CSA B45 Series-02 (R2013), Plumbing Fixtures (Consists of B45.0-02, B45.1-02, B45.2-02, B45.3-02, B45.4-02, B45.5-02, B45.6-02, B45.7-02, B45.8-02 and B45.9-02), Includes Updates No. 1, No. 2, No. 3, and No. 4 (2007).
  - .2 CSA B125-01, Plumbing Fittings.
  - .3 CSA B651-12 (R2017), Accessible Design for the Built Environment.
- 1.3 Shop Drawings .1 Submit shop drawings and product data in accordance with Section 20 05 01 - Mechanical General Requirements.
- .2 Indicate, for all fixtures and trim:
- .1 Dimensions, construction details, roughing-in dimensions.
  - .2 Factory-set water consumption per flush at recommended pressure.
  - .3 (For water closets, urinals): minimum pressure required for flushing.
- 1.4 Closeout Submittals .1 Provide maintenance data including monitoring requirements for incorporation into manuals specified in Section 20 05 01 - Mechanical General Requirements.
- .2 Include:
- .1 Description of fixtures and trim, giving manufacturer's name, type, model, year, capacity.
  - .2 Details of operation, servicing, maintenance.
  - .3 List of recommended spare parts.

## **PART 2 - PRODUCTS**

- 2.1 Manufactured Units .1 Fixture piping.
- .1 Hot and cold water supplies to each fixture:
    - .1 Stops supplies shall be all brass with full turn brass seams and washer replaceable attachment shall be IPS inlet x compression OD outlet to fixture. All fixture stop valves shall be screw driver type.
    - .2 Chrome plated in all exposed places.
  - .2 Waste:
    - .1 Cast brass adjustable style P-trap with cleanout on each fixture not having integral trap.
    - .2 Chrome plated in all exposed places.

<u>2.1 Manufactured Units (Cont'd)</u>	.1	(Cont'd)
	.2	(Cont'd)
	.3	Sink and lavatory heavy gauge P-traps shall be cast brass style adjustable with 17 ga. seamless brass wall bend. Attachment nuts shall be brass, no zinc allowed. P-traps to be removable/union type or to include cleanout.
	.4	Lavatory strainers shall be chrome plated cast brass with 17 ga. seamless brass tailpiece.
	.5	All barrier-free lavatories and sinks shall have chrome plated offset tail piece in addition to P-trap with cleanout. Insulate P-trap and hot & cold water pipes with pre-formed & finished surface insulation. Armaflex insulation and tape not acceptable.
	.2	Fixtures:
	.1	Manufacture in accordance with CSA B45.
	.2	All products, where applicable, shall be marked with manufacturer's name or product #.
	.3	Trim, fittings: manufacture in accordance with CSA B125.
	.4	Number, locations: Architectural drawings to govern.
	.5	Fixtures in any one location to be product of one manufacturer and of same type.
	.6	Trim in any one location to be product of one manufacturer and of same type unless otherwise indicated.
	.7	Reference drawing schedule for configuration and type.
<u>2.2 Carriers</u>	.1	Provide for all wall mounted plumbing fixtures.
<u>2.3 Roughing-in of Fixtures</u>	.1	Rough-in for equipment supplied by other to be complete with valved supplies, wastes and vents, capped and associated fitting piping & reducers.
<u>2.4 Plumbing Fixtures</u>	.1	Reference fixture schedule on Drawings.

### **PART 3 - EXECUTION**

<u>3.1 Installation</u>	.1	Mounting heights:
	.1	Standard: to comply with manufacturer's recommendations unless otherwise indicated or specified.
	.2	Wall-hung fixtures: as indicated on architectural elevations.
	.3	Physically handicapped: to comply with most stringent of either NBCC, OBC or CAN/CSA B651.

- 3.2 Urinals .1 Urinal waste pipe & fittings shall be DWV PVC equivalent to IPEX System 15 in accordance with specification Section 22 13 18 - Drainage Waste and Vent - Plastic. Extend plastic piping up to combined waste from adjacent lavatory or other plumbing fixtures allowing dilution of waste.
- 3.3 Adjusting .1 Conform to water conservation requirements specified in this section.
- .2 Adjustments:
- .1 Adjust water flow rate to design flow rates and sensors.
  - .2 Adjust pressure to fixtures to ensure no splashing at maximum pressures.
  - .3 Adjust flush valves to suit actual site conditions.
- .3 Checks:
- .1 Water closets: flushing action.
  - .2 Aerators: operation, cleanliness.
  - .3 Vacuum breakers, backflow preventers: operation under all conditions.

- END OF SECTION -

## **PART 1 - GENERAL**

1.1 Related Sections .1 This section shall be read in conjunction with specification Section 20 05 01 - Mechanical General Requirements, all mechanical sections, and all other disciplines related to the project.

1.2 References .1 Canadian General Standards Board (CGSB)  
.1 CAN/CGSB-1.181-99, Ready-Mixed Organic Zinc-Rich Coating.

## **PART 2 - PRODUCTS**

2.1 Not Used .1 Not Used.

## **PART 3 - EXECUTION**

3.1 Connections to Equipment .1 In accordance with manufacturer's instructions unless otherwise indicated.  
.2 Use valves and either unions or flanges for isolation and ease of maintenance and assembly.  
.3 Use double swing joints when equipment mounted on vibration isolation and when piping subject to movement.

3.2 Clearances .1 Provide clearance around systems, equipment and components for observation of operation, inspection, servicing, maintenance and as recommended by manufacturer.  
.2 Provide space for disassembly, removal of equipment and components as recommended by manufacturer or as indicated (whichever is greater) without interrupting operation of other system, equipment, components.

3.3 Drains .1 Install piping with grade in direction of flow except as indicated or specified otherwise.  
.2 Install drain valve at low points in piping systems, at equipment at section isolating valves and at base of all risers.  
.3 Pipe each drain valve discharge separately to above floor drain. Discharge to be visible.

- 3.3 Drains (Cont'd) .4 Drain valves: NPS 3/4 full port ball valves unless indicated otherwise, with hose end male thread, cap and chain.
- 3.4 Automatic Air Vents .1 Install automatic air vents at high points of piping systems.  
.2 Install full port ball at each automatic air vent.  
.3 Air vents must have minimum connection of 13 mm (1/2").
- 3.5 Dielectric Couplings .1 General: Compatible with system, to suit pressure rating of system.  
.2 Locations: Where dissimilar metals are joined.  
.3 NPS 2 and under: isolating unions or bronze valves.  
.4 Over NPS 2: Isolating flanges.
- 3.6 Pipework Installation .1 Screwed fittings to be jointed with Teflon tape.  
.2 Protect openings against entry of foreign material.  
.3 Install so that equipment can be isolated and removed without interruption to operation of any other equipment or systems.  
.4 Assemble piping using fittings manufactured to ANSI standards.  
.5 Weldolets sockolets Saddle type branch fittings may be used on mains if branch line is no larger than half the size of the main. Hole saw (or drill) and ream main so as to maintain full inside diameter of branch line prior to welding saddle. Provide isolation valves at each branch connection.  
.6 Install exposed piping, equipment, rectangular cleanouts and similar items parallel or perpendicular to building lines.  
.7 Install concealed pipework so as to minimize furring space, maximize headroom, conserve space.  
.8 Except where indicated otherwise, slope piping in direction of flow for positive drainage and venting.  
.9 Except where indicated, install so as to permit separate thermal insulation of each pipe.  
.10 Group piping wherever possible and as indicated.  
.11 Ream pipes, remove scale and other foreign material before assembly.  
.12 Use eccentric reducers at pipe size changes to ensure positive drainage and venting.

- 3.6 Pipework Installation (Cont'd)
- .13 Provide for thermal expansion as indicated and specified.
  - .14 Contractor shall carry a structural engineer to design and certify the support system for any piping distribution system exceeding 100 mm (4") or where piping is grouped such that the distributed weight exceeds the building structure limits. (Note: In steel building structure the piping supports shall never be supported by a single joist or off the bottom chord of the joist or truss.
- 3.7 Escutcheons
- .1 Install on pipes passing through walls, partitions, floors, and ceilings in finished areas.
  - .2 Construction: One piece type with set screws. Chrome or nickel plated brass or type 302 stainless steel.
  - .3 Sizes: Outside diameter to cover opening or sleeve. Inside diameter to fit around pipe or outside of insulation if so provided.
- 3.8 Flushing out of Piping Systems
- .1 Preparatory to acceptance, clean and refurbish equipment and leave in operating condition, including replacement of filters in piping systems.
  - .2 Provide test results upon completion and retain written report on status after complete.
- 3.9 Pressure Testing of Equipment and Pipework
- .1 Advise Engineer 48 hours minimum prior to performance of pressure tests.
  - .2 Pipework: Test to 1½ times normal operating pressure to a maximum of the piping systems working pressure including devices (i.e.: valves, fittings, accessories). Minimum test pressure to be 862 kPa (125 psi).
  - .3 Maintain specified test pressure without loss for four 4 hours minimum. Temperature of system to remain constant during of test.
  - .4 Prior to tests, isolate equipment and other parts which are not designed to withstand test pressure or media.
  - .5 Conduct tests in presence of Engineer.
  - .6 Bear costs for repairs or replacement, retesting, and making good. Engineer to determine whether repair or replacement is appropriate.
  - .7 Insulate or conceal work only after approval and certification of tests by Engineer.
- 3.10 Existing Systems
- .1 Connect into existing piping systems at times approved by Engineer.
  - .2 Request written approval 10 days minimum, prior to commencement of work.
  - .3 Be responsible for damage to existing plant by this work.

- |   |    |   |
|---|----|---|
| <u>3.10 Existing Systems<br/>(Cont'd)</u> | .4 | Ensure daily clean-up of existing areas.  |
|   | .5 | Cleaning & flushing of new piping to be done prior to making final connection to existing system. |
|   | .6 | Provide full size bypass as required to ensure cleaning of piping.                                |

- END OF SECTION -

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 20 05 01 - Mechanical General Requirements, all mechanical sections, and all other disciplines related to the project.
- 1.2 References .1 American Society of Heating, Refrigeration and Air-Conditioning Engineers.  
.1 ASHRAE 90.1-2016, Energy Code for Buildings Except Low-Rise Residential Buildings.  
.2 Electrical Equipment Manufacturers' Advisory Council (EEMAC)  
.3 National Electrical Manufacturers Association (NEMA)  
.1 NEMA MG 1-2016, Motors and Generators.  
.4 Ontario Regulation  
.1 ONTARIO OBC-2012, 2012 Ontario Building Code Compendium.
- 1.3 Electrical .1 Electrical work to conform to Division 26 including the following:  
.1 Control wiring and conduit is specified in Division 26 except for conduit, wiring and connections below 50 V which are related to control systems specified in Divisions 20, 21, 22, 23 & 25. Refer to Division 26 for quality of materials and workmanship.
- 1.4 Shop Drawings .1 Submit shop drawings in accordance with Section 20 05 01 - Mechanical General Requirements.
- 1.5 Closeout Submittals .1 Provide maintenance data for motors, drives and guards for incorporation into manual specified in Section 20 05 01 - Mechanical General Requirements.

## **PART 2 - PRODUCTS**

- 2.1 General .1 Motors to be premium efficiency, in accordance with NEMA 1 premium motor standards and the requirements of ASHRAE 90.1 unless superceded by Ontario Building Code (OBC) Supplementary Standard SB-10.
- 2.2 Motors .1 Provide premium efficiency motors for mechanical equipment to NEMA MG 1 Part 31.

2.2 Motors .2 Motors efficiency must exceed the following:  
(Cont'd)

Open Drip-Prrof (ODP) Type

Motor Size	Speed (RPM)		
	1200	1800	3600
HP	NEMA Premium Nominal Efficiency		
1 & below	82.5%	85.5%	77.0%
1.5	86.5%	86.5%	84.0%
2	87.5%	86.5%	85.5%

2.2 Motors  
(Cont'd)

- .3 Motors under 373 W (½ HP): speed as indicated, continuous duty, built-in overload protection, resilient mount, single phase, 120 V, unless otherwise specified or indicated.
- .4 Motors 373 W (½ HP) to 14.92 kW (20 HP): EEMAC Class B/F, squirrel cage induction, speed as indicated, continuous duty, drip proof, ball bearing, maximum temperature rise 45°C/60°C over ambient of 30°C, 3 phase, 600 V, unless otherwise specified or indicated.
- .5 Two speed motors shall be double winding type.
- .6 Motors coupled with VFD shall be premium efficiency, inverter duty type to NEMA MG 1 Part 31 and shall have as a minimum EEMAC Class F insulation. Inverter ready motors shall not be acceptable.
- .7 Motors coupled with VFD's shall include a shaft grounding ring.
- .8 Motors located outside to be TEFC type, unless located in insulated weatherproof enclosure.

2.3 Temporary Motors

- .1 If delivery of specified motor will delay completion or commissioning work, install motor approved by Consultant for temporary use. Work will only be accepted when specified motor is installed.

2.4 Belt Drives

- .1 Fit reinforced belts in sheave matched to drive. Multiple belts to be matched sets.
- .2 Use cast iron or steel sheaves secured to shafts with removable keys unless otherwise specified.
- .3 For motor under 7.5 kW (10 HP): standard adjustable pitch drive sheaves, having plus or minus 10% range. Use mid-position of range for specified r/min.
- .4 For motors 7.5 kW (10 HP) and over: sheave with split tapered bushing and keyway having fixed pitch unless specifically required for item concerned. Provide sheave of correct size to suit balancing.
- .5 Correct size of sheave to be determined during start-up and commissioning.
- .6 Minimum drive rating: 1½ times nameplate rating on motor. Keep overhung loads within manufacturer's design requirements on prime mover shafts.
- .7 Motor slide rail adjustment plates to allow for centre line adjustment.

2.5 Drive Guards

- .1 Provide guards for unprotected drives.
- .2 Guards for belt drives;
  - .1 Expanded metal screen welded to steel frame.
  - .2 Minimum 1.6 mm (16 ga). sheet metal tops and bottoms.

- 2.5 Drive Guards (Cont'd)
- .2 (Cont'd)
  - .3 38 mm (1½") dia holes on both shaft centres for insertion of tachometer.
  - .4 Removable for servicing.
  - .5 OSHA approved.
  - .6 Sized to allow either sheave to be increased by two sizes.
- .3 Provide means to permit lubrication and use of test instruments with guards in place.
- .4 Install belt guards to allow movement of motors for adjusting belt tension.
- .5 Plenum fan assembly must have an enclosed safety screen as per OSHA standards.

### **PART 3 - EXECUTION**

- 3.1 Installation
- .1 Fasten securely in place.
  - .2 Ensure motor installation is easily removable for servicing.

- END OF SECTION -

**PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 20 05 01 - Mechanical General Requirements, all mechanical sections, and all other disciplines related to the project.

.2 Submit data for all valves specified in this section.
- 1.4 Closeout Submittals .1 Submit maintenance data for incorporation into manual specified in Section 20 05 01 - Mechanical General Requirements.
- 1.5 Acceptable Manufacturers .1 Refer to Acceptable Products Table in Part 3 of this section.

## **PART 2 - PRODUCTS**

- 2.1 General .1 All valves of the same type to be from one manufacturer.
- .2 All valves to have CRN registration numbers.
- 2.2 Check Valves .1 NPS 2 and under, bronze swing type, bronze disc:
- .1 Standard specification: MSS SP-80.
- .2 Connections: with hex. shoulders.
- .3 Body: Y-pattern with integral seat at 45°, screw-in cap with hex head.
- .4 Disc and seat: renewable rotating disc, two-piece hinge disc construction; seat: regrindable.
- 2.3 Ball Valves .1 NPS 4 and under:
- .1 Body and cap: cast high tensile bronze to ASTM B62 or brass to ASTM B16/B16M C36000.
- .2 Stem: tamperproof ball drive.
- .3 Stem packing nut: external to body.
- .4 Ball and seat: replaceable chrome plated brass solid full port ball and teflon seats.
- .5 Stem seal: TFE with external packing nut.
- .6 Operator: removable lever handle.
- 2.4 Control Valves .1 Body: globe style or characterized ball.
- .1 Flow characteristic equal percentage.
- .2 Flow factor (KV) to suit application: CV in imperial units.
- .3 Normally open or normally closed, as indicated.
- .4 Two or three port, as indicated.
- .5 Leakage rate ANSI class IV, 0.01% of full open valve capacity.
- .6 Packing easily replaceable.
- .7 Stem, stainless steel.
- .8 Plug and seat, stainless steel.
- .9 Disc, replaceable, material to suit application.
- .10 NPS 2 and under:
- .1 Screwed National Pipe Thread (NPT) tapered female connections.
- .2 Valves to ANSI Class 250, valves to bear ANSI mark.
- .3 Rangeability 50:1 minimum.
- .2 Electronic/Electric Valve Actuators:
- .1 Construction: steel, cast iron, aluminum.
- .2 Control signal: 0-10V DC or 4-20 mA DC.
- .3 Positioning time: to suit application. 90 sec maximum.
- .4 Fail to normal position as indicated.
- .5 Scale or dial indication of actual control valve position.
- .6 Size actuator to meet requirements and performance of control valve specifications.

- 2.4 Control Valves (Cont'd)
- .2 (Cont'd)
  - .7 For interior and perimeter terminal heating and cooling applications floating control actuators are acceptable.
  - .8 Minimum shut-off pressure: to suit application.
  - .3 Room temperature sensors and display wall modules.
    - .1 Temperature sensing and display wall module to base building standard.
      - .1 LCD display to show space temperature and temperature setpoint.
      - .2 Buttons for occupant selection of temperature setpoint with lockout capability.
      - .3 Jack connection for plugging in laptop personal computer for access to zone bus.
      - .4 Integral thermistor sensing element 10,000 ohm at 24 degrees.
      - .5 Accuracy 0.2 degrees C over range of 0 to 70 degrees C.
      - .6 Stability 0.02 degrees C drift per year.
      - .7 Separate mounting base for ease of installation.
      - .8 Low voltage transformer wired from nearest available circuit c/w associated wiring. Coordinate with Division 26.

### **PART 3 - EXECUTION**

- 3.1 Acceptable Products Table
- .1 Refer to Acceptable Products Table in Part 3 of this section.
- 3.2 Installation
- .1 Install rising stem valves in upright position with stem above horizontal.
  - .2 Handwheel with chain operators are to be installed on all valves more than 3 metres above floor.
  - .3 Remove internal parts before soldering or brazing.
  - .4 Install all valves such that adequate clearance is provided to allow for obstruction free operation.
  - .5 Install valves at all branch take-offs and to isolate each piece of equipment, and as indicated.
  - .6 For all threaded valves provide one screwed union beside each valve to allow easy replacement of valve.
  - .7 Install all valves as per manufacturer's recommendation.

**Valves**

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 20 05 01 - Mechanical General Requirements, all mechanical sections, and all other disciplines related to the project.
- 1.2 References .1 American Society of Mechanical Engineers (ASME)  
.1 ASME B31.1-2016, Power Piping, (SI Edition).  
.2 American Society for Testing and Materials (ASTM)  
.1 ASTM A125-96(2013)e1, Specification for Steel Springs, Helical, Heat-Treated.  
.2 ASTM A307-14e1, Specification for Carbon Steel Bolts and Studs, 60,000 PSI Tensile Strength.  
.3 ASTM A563-15, Specification for Carbon and Alloy Steel Nuts (Metric).  
.3 Factory Mutual (FM)  
.4 Manufacturer's Standardization Society of the Valves and Fittings Industry (MSS)  
.1 MSS SP-58-2009, Pipe Hangers and Supports - Materials, Design, Selection, Manufacture, Application, and Installation.  
.5 Underwriter's Laboratories of Canada (ULC).
- 1.3 Design Requirements .1 Construct pipe hanger and support to manufacturer's recommendations utilizing manufacturer's regular production components, parts and assemblies.  
.2 Base maximum load ratings on allowable stresses prescribed by ASME B31.1 or MSS SP-58.  
.3 Ensure that supports, guides, anchors do not transmit excessive quantities of heat to building structure.  
.4 Design hangers and supports to support systems under all conditions of operation, allow free expansion and contraction, prevent excessive stresses from being introduced into pipework or connected equipment.  
.5 Provide for vertical adjustments after erection and during commissioning. Amount of adjustment to be in accordance with MSS SP-58.
- 1.4 Design for Seismic Events .1 Design supports, platforms, hangers, racks to withstand seismic events as specified Section 23 05 49.01 - Seismic Restraint Systems (SRS).
- 1.5 Shop Drawings and Product Data .1 Submit shop drawings and product data in accordance with Section 20 05 01 - Mechanical General Requirements.

- 1.5 Shop Drawings and Product Data (Cont'd) .2 Submit shop drawings and product data for following items:
- .1 All bases, hangers and supports.
  - .2 Connections to equipment & structure.
  - .3 Structural assemblies.
- 1.6 Closeout Submittals .1 Provide maintenance data for incorporation into manual specified in Section 20 05 01 - Mechanical General Requirements.

## **PART 2 - PRODUCTS**

- 2.1 General .1 Fabricate hangers, supports and sway braces in accordance with ANSI B31.1 and MSS SP-58.
- .2 Use components for intended design purpose only. Do not use for rigging or erection purposes.
- 2.2 Pipe Hangers .1 Finishes:
- .1 Pipe hangers and supports: galvanized after manufacture.
  - .2 Use electro-plating galvanizing process or hot dipped galvanizing process.
  - .3 Ensure steel hangers in contact with copper piping are copper plated or epoxy coated.
- .2 Upper attachment structural: Suspension from lower flange of I-Beam.
- .1 Cold piping NPS 2 maximum: Malleable iron C-clamp with hardened steel cup point setscrew, locknut and carbon steel retaining clip.
    - .1 Rod: 9 mm UL listed.
  - .2 Cold piping NPS 2½ or greater, all hot piping: Malleable iron beam clamp, eye rod, jaws and extension with carbon steel retaining clip, tie rod, nuts and washers, UL listed to MSS SP-58.
- .3 Upper attachment structural: Suspension from upper flange of I-Beam.
- .1 Cold piping NPS 2 maximum: Ductile iron top-of-beam C-clamp with hardened steel cup point setscrew, locknut and carbon steel retaining clip, UL listed to MSS SP-58.
  - .2 Cold piping NPS 2½ or greater, all hot piping: Malleable iron top-of-beam jaw-clamp with hooked rod, spring washer, plain washer and nut UL listed.
- .4 Upper attachment to concrete.
- .1 Ceiling: Carbon steel welded rod, clevis plate, clevis pin and cotters with forged weldless steel nut.
  - .2 Concrete wedge anchor with knockout protector plate UL listed to MSS SP-58. Anchor installation to be via concrete pre-drilling. Impact insert type anchor not allowed.
- .5 Manufacturer assemblies:
- .1 Sway braces for seismic restraint systems: to Section 23 05 49.01 - Seismic Restraint Systems (SRS).

- 2.2 Pipe Hangers (Cont'd)
- .6 Hanger rods: threaded rod material to MSS SP-58.
    - .1 Ensure that hanger rods are subject to tensile loading only.
    - .2 Provide linkages where lateral or axial movement of pipework is anticipated.
    - .3 Do not use 22 mm or 28 mm rod.
  - .7 Pipe attachments: material to MSS SP-58.
    - .1 Attachments for steel piping: carbon steel black.
    - .2 Attachments for copper piping: copper plated black steel.
    - .3 Use insulation shields for hot pipework.
    - .4 Oversize pipe hangers and supports.
  - .8 Adjustable clevis: material to MSS SP-58 UL listed, clevis bolt with nipple spacer and vertical adjustment nuts above and below clevis. Ensure "U" has hole in bottom for riveting to insulation shields.
  - .9 Yoke style pipe roll: carbon steel yoke, rod and nuts with cast iron roll, to MSS SP-58.
  - .10 U-bolts: carbon steel to MSS SP-58 with 2 nuts at each end to ASTM A563.
    - .1 Finishes for steel pipework: black.
    - .2 Finishes for copper, glass, brass or aluminum pipework: black, with formed portion epoxy coated.
  - .11 Pipe rollers: cast iron roll and roll stand with carbon steel rod to MSS SP-58, Type 43.
    - .1 Finish: Hot dipped galvanized steel.
    - .2 Acceptable material: Tolco or approved equal.
- 2.3 Riser Clamps
- .1 Steel or cast iron pipe: black carbon steel to MSS SP-58, type 42, UL listed.
  - .2 Copper pipe: carbon steel copper plated to MSS SP-58, type 42.
  - .3 Bolts: to ASTM A307.
  - .4 Nuts: to ASTM A563.
- 2.4 Insulation Protection Shields
- .1 Insulated cold piping: 64 kg/m<sup>3</sup> density insulation plus insulation protection shield to: MSS SP-58, galvanized sheet carbon steel. Length designed for maximum 3 m span.
  - .2 Insulated hot piping: Curved plate 300 mm long, with edges turned up, welded-in centre plate for pipe sizes NPS 12 and over, carbon steel to comply with MSS SP-58.
- 2.5 Constant Support Spring Hangers
- .1 Springs: alloy steel to ASTM A125, shot peened, magnetic particle inspected, with +/-5% spring rate tolerance, tested for free height, spring rate, loaded height and provided with CMTR.
  - .2 Load adjustability: 10% minimum adjustability each side of calibrated load. Adjustment without special tools. Adjustments not to affect travel capabilities.
  - .3 Provide upper and lower factory set travel stops.

<u>2.5 Constant Support Spring Hangers (Cont'd)</u>	.4	Provide load adjustment scale for field adjustments.
	.5	Total travel to be actual travel + 20%. Difference between total travel and actual travel 25 mm minimum.
	.6	Individually calibrated scales on each side of support calibrated prior to shipment, complete with calibration record.
<u>2.6 Variable Support Spring Hangers</u>	.1	Vertical movement: 13 mm minimum, 50 mm maximum, use single spring pre-compressed variable spring hangers.
	.2	Vertical movement greater than 50 mm: use double spring pre-compressed variable spring hanger with 2 springs in series in single casing.
	.3	Variable spring hanger to be complete with factory calibrated travel stops.
	.4	Steel alloy springs: to ASTM A125, shot peened, magnetic particle inspected, with +/-5% spring rate tolerance, tested for free height, spring rate, loaded height and provided with CMTR.
<u>2.7 Equipment Supports</u>	.1	Fabricate equipment supports not provided by equipment manufacturer from structural grade steel meeting requirements of Section 05 12 23 - Structural Steel. Submit calculations with shop drawings.
<u>2.8 Equipment Anchor Bolts and Templates</u>	.1	Provide templates to ensure accurate location of anchor bolts.
	.2	For attachment to concrete, provide concrete wedge anchors with knockout protection plate UL listed. Anchor installation to be via concrete pre-drilling. Impact insert type anchor not allowed.
<u>2.9 Pipe, Duct, Conduit Penetrations through Slabs</u>	.1	Where piping or conduits penetrate through the floor of mechanical room, a 100 mm high housekeeping pad shall be installed with minimum 150 mm between conduit/pipe and the edge of the pad. This pad shall be bonded to the existing slab through which the pipes, ducts or conduit shall pass.

### **PART 3 - EXECUTION**

<u>3.1 Installation</u>	.1	Install in accordance with: manufacturer's instructions and recommendations.
	.2	Vibration Control Devices: .1 Install on piping systems at pumps and elsewhere as indicated.

- 3.1 Installation (Cont'd)
- .3 Clamps on riser piping:
    - .1 Support independent of connected horizontal pipework using riser clamps and riser clamp lugs welded to riser.
    - .2 Bolt-tightening torques to be to industry standards.
    - .3 Steel pipes: Install below coupling or shear lugs welded to pipe.
    - .4 Cast iron pipes: Install below joint.
  - .4 Clevis plates:
    - .1 Attach to concrete with 4 minimum concrete inserts, one at each corner.
  - .5 Provide supplementary structural steelwork where structural bearings do not exist or where concrete inserts are not in correct locations.
  - .6 Use approved constant support type hangers where:
    - .1 vertical movement of pipework is 13 mm or more,
    - .2 transfer of load to adjacent hangers or connected equipment is not permitted.
  - .7 Use variable support spring hangers where:
    - .1 transfer of load to adjacent piping or to connected equipment is not critical.
    - .2 variation in supporting effect does not exceed 25% of total load.
  - .8 When attaching to open web steel joists provide additional hangers for pipes with diameters of 75 mm or greater in order to reduce the magnitude of the concentrated load and spread the load to the joists equally. In these cases the allowable spacing of hangers for pipes permitted under ASME / MSS SP-58 will be reduced and additional hangers will be required as directed by steel fabricator and/or structural engineer.
  - .9 Locate hangers at the top of open web steel joists where the horizontal and diagonal members meet at a joint.
  - .10 All installations must be in conjunction with Section 23 05 49.01 - Seismic Restraint System.
- 3.2 Hanger Spacing
- .1 Plumbing piping: most stringent requirements of Manufacturer's recommendations, Canadian Plumbing Code, Provincial Code, or authority having jurisdiction.
  - .2 Fire protection: to applicable fire code.
  - .3 Gas & fuel piping: to applicable code.
  - .4 Copper piping: up to NPS ½: every 1.5 m.
  - .5 Flexible joint roll groove pipe: in accordance with table below, but not less than one hanger at joints.
  - .6 Within 300 mm of each elbow.

3.2 Hanger Spacing  
 (Cont'd)

Maximum Pipe Size: NPS up to	Maximum Spacing Steel	Maximum Spacing Copper	Maximum Spacing XFR
1¼	2.1 m	1.8 m	1.6 m
1½	2.7 m	2.4 m	1.6 m
2	3.0 m	2.7 m	1.8 m
2½	3.6 m	3.0 m	1.8 m
3	3.6 m	3.0 m	2.2 m
4	4.2 m	3.6 m	2.6 m
6	5.1 m		3.1 m
8	5.7 m		3.6 m
10	6.6 m		4.0 m
12	6.9 m		4.4 m

.7 Pipework greater than NPS 12: to MSS SP-58.

3.3 Hanger Installation

- .1 Install hanger so that rod is vertical under operating conditions.
- .2 Adjust hangers to equalize load.
- .3 Support from structural members. Where structural bearing does not exist or inserts are not in suitable locations, provide supplementary structural steel members.

3.4 Horizontal Movement

- .1 Angularity of rod hanger resulting from horizontal movement of pipework from cold to hot position not to exceed 4° from vertical.
- .2 Where horizontal pipe movement is less than 13 mm, offset pipe hanger and support so that rod hanger is vertical in the hot position.

3.5 Final Adjustment

- .1 Adjust hangers and supports:
  - .1 Ensure that rod is vertical under operating conditions.
  - .2 Equalize loads.
- .2 Adjustable clevis:
  - .1 Tighten hanger load nut securely to ensure proper hanger performance.
  - .2 Tighten upper nut after adjustment.
- .3 C-clamps: Follow manufacturer's recommended written instructions and torque values when tightening C-clamps to bottom flange of beam.
- .4 Beam clamps: Hammer jaw firmly against underside of beam.

- END OF SECTION -

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 20 05 01 - Mechanical General Requirements, all mechanical sections, and all other disciplines related to the project.
- 1.2 References .1 ASHRAE HVAC Application-2015, Chapter 54 Seismic & Wind Restraint Design. In addition reference ASHRAE "A Practical Guide to Seismic Restraint".
- .2 Ontario Regulation
- .1 ONTARIO OBC-2012, 2012 Ontario Building Code Compendium.
- .3 National Fire Protection Association (NFPA)
- .1 NFPA (Fire) 13, Installation of Sprinkler Systems, 2016 edition.
- .2 NFPA (Fire) 14, Installation of Standpipe and Hose Systems, 2016 edition.
- .3 NFPA (Fire) 20, Installation of Stationary Pumps for Fire Protection, 2016 edition.
- .4 SMACNA Seismic Restraint Manual 3rd Edition, 2008.
- 1.3 Definitions .1 SRS: acronym for Seismic Restraint System.
- 1.4 General Description .1 This section covers design, supply and installation of complete SRS for all systems, equipment specified for installation on this project. This includes fire protection piping & mechanical equipment and systems, both vibration isolated and statically supported.
- .2 SRS to be fully integrated into & compatible with:
- .1 Noise and vibration controls specified elsewhere in this project specification.
- .2 Structural, mechanical, electrical design of project.
- .3 During a seismic event, SRS to prevent systems and equipment from causing personal injury and from moving from normal position.
- .4 Specified critical systems as noted below must remain operational during and after an earthquake:
- .1 All systems for buildings as listed in OBC Table 4.1.8.17.
- .2 Life safety systems for P2 buildings.
- .3 Natural gas & fuel oil systems for P2 buildings.
- .5 Design to be by Professional Engineer specializing in design of SRS and registered in Province of Ontario. The following shall bear the SRS Design Engineer's seal and signature:
- .1 SRS calculations.
- .2 SRS shop drawings.
- .3 SRS installation inspections.
- .4 SRS final certification letter for the project.

Note: The final certification letter shall identify the following with the body of the letter:

- .1 The date of the final inspection.
- .2 The list of contract documents which were reviewed including but not limited to the mechanical drawings, project change orders, site instructions, etc.
- .3 A statement which clearly identified any exclusions of scope of service.
- .4 A statement that certifies the installation meets the latest version of OBC & applicable codes & standards.

- 1.5 Submittals .1 Submit shop drawings and product data in accordance with Section 20 05 01 - Mechanical General Requirements.
- .2 Submittals to include:
- .1 Full details of design criteria, calculations for all equipment & associated systems.
  - .2 Seismic Design Engineer shall provide a spreadsheet identifying all equipment requiring or not requiring seismic restraints and include all calculations.
  - .3 A copy of the seismic design engineer professional liability insurance coverage.
- .3 Submit additional copy of shop drawings and product data to Structural Engineer for review of connection points to building structure.

- 1.6 Maintenance Data .1 Provide maintenance data including monitoring requirements for incorporation into manuals specified in Section 20 05 01 - Mechanical General Requirements.

## **PART 2 - PRODUCTS**

- 2.1 General .1 Definitions
- .1 Seismic System: isolation and seismic restraint products supplied by one supplier.
  - .2 Manufacturer: manufacturer of the isolation and seismic restraint system.
  - .3 Supplier: manufacturers' and seismic engineer's representative
  - .4 Seismic Engineer: a Professional Engineer holding a Certificate of Authorization in the Province of Ontario with a minimum of 5 years experience in seismic design, and with a minimum of \$1 million Professional Liability Insurance.
- .2 Each contactor shall use one Supplier to provide seismic design, isolation, and seismic restraint.
- .3 Seismic restraints are to be provided for all operational and functional components of building services in accordance with the current Ontario Building Code, ASHRAE Standard "A Practical Guide to Seismic Restraint", NFPA (Fire) 13, 14 & 20, SMACNA "Seismic Restraint Manual" and good engineering practice.

- 2.1 General (Cont'd)
- .4 The contractor shall utilize a Supplier familiar with the design of seismic systems to provide a comprehensive package of isolation and seismic restraint for the project. Provide detailed shop drawings showing the proposed restraint system for all required equipment, piping, and ductwork on the project. The shop drawings shall include calculations certified by the Seismic Engineer.
- .1 Acceptable Suppliers: HTS Engineering, Master Group, Walmar, E.H. Price.
  - .2 Acceptable Manufacturers: Kinetics / Vibron, Tecoustics, Mason, Gripple Seismic.
  - .3 Alternates to be approved by Addendum only.
- .5 Cable restraint systems, rod stiffener clamps and seismic isolator capacities to be verified by an independent test laboratory. Connection materials and site specific designs to be by the Seismic Engineer. The Seismic Engineer may specify material and anchors provided by the contractor where this is appropriate. It is the contractors' responsibility to ensure that the Seismic Engineers' requirements and specification have been met.
- .6 At the completion of the project, the Supplier and the Seismic Engineer shall review the installations on site, and shall prepare a written report, with a sealed letter from the Seismic Engineer, certifying that the installations have been completed in accordance with their design and shop drawings.
- .7 The Manufacturer shall be a member of VISCMA (Vibration Isolation and Seismic Control Manufacturers Association). They shall have a letter issued to their Supplier confirming that they have reviewed and accepted the engineering practices used by the Seismic Engineer. The letter shall also state that the manufacturer accepts the Supplier to act as their representative for the product.
- 2.2 Seismic Force
- .1 The Importance Factor for this project is:  
.1  $I = 1.0$  - All other buildings i.e.: Office & General Buildings.  
Note: As per OBC.
- .2 The site classification for seismic site response and shear wave velocity parameters shall be as indicated on structural documents and as recorded in the geotechnical report.

### **PART 3 - EXECUTION**

- 3.1 Installation
- .1 Install Seismic Restraint Systems in accordance with Seismic Engineer's and manufacturer's recommendations.
- .2 Install SRS at least 25 mm from all other equipment, systems, services.
- .3 Co-ordinate connections with all disciplines.

- |   |    |   |
|---|----|---|
| <u>3.2 Inspection and Certification</u> | .1 | SRS to be inspected and certified by Manufacturer upon completion of installation.  |
|   | .2 | Seismic Design Engineer shall provide written report to Engineer certifying that SRS has been installed in accordance with the SRS drawings. The report shall bear the seal and signature of the SRS Design Engineer. |
| <u>3.3 Commissioning Documentation</u>  | .1 | Upon completion and acceptance of certification, hand over to Engineer complete set of construction documents, revised to show "as-built" conditions.   |

- END OF SECTION -

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 20 05 01 - Mechanical General Requirements, all mechanical sections, and all other disciplines related to the project.
- 1.2 References .1 Canadian General Standards Board (CGSB).  
.1 CAN/CGSB-24.3-92, Identification of Piping Systems.  
.2 Canadian Standards Association (CSA).  
.1 CSA B149.1-15, Natural Gas and Propane Installation Code.  
.2 CSA Z7396.1-12. Medical gas pipeline systems - Part 1: Pipelines for medical gases, medical vacuum, medical support gases, and anaesthetic gas scavenging systems.  
.3 National Fire Protection Association  
.1 NFPA (Fire) 13, Installation of Sprinkler Systems, 2016 Edition.
- 1.3 Product Data .1 Submit product data in accordance with Section 20 05 01 - Mechanical General Requirements.  
.2 Product data to include paint colour chips, all other products specified in this section.
- 1.4 Samples .1 Submit samples in accordance with Section 20 05 01 - Mechanical General Requirements.  
.2 Samples to include nameplates, labels, tags, lists of proposed legends.

## **PART 2 - PRODUCTS**

- 2.1 General .1 Identification systems to be in accordance with existing building NRC standard. If there is no existing building identification system obvious than the following applies.
- 2.2 Manufacturer's Equipment Nameplates .1 Plastic laminate nameplate mechanically fastened to each piece of equipment by manufacturer.  
.2 Lettering and numbers to be raised or recessed.  
.3 Information to include, as appropriate:  
.1 Equipment: Manufacturer's name, model, size, serial number, capacity.  
.2 Motor: voltage, Hz, phase, power factor, duty, frame size.

2.3 System Nameplates

- .1 Colours:
  - .1 Hazardous: red letters, white background.
  - .2 Elsewhere: black letters, white background.
- .2 Construction:
  - .1 1/8" thick laminated plastic , matte finish, with square corners, letters accurately aligned and machine engraved into core.
- .3 Sizes:
  - .1 Conform to following table:

Size #	Height Sizes (mm)	No. of Lines	Height of Letters (mm)
1	40	1	20
2	75	1	50
  - .2 Use maximum of 25 letters/numbers per line.
- .4 Locations:
  - .1 Terminal cabinets, control panels: Use size #1.
  - .2 Equipment in Mechanical Rooms: Use size #2.

2.4 Piping Systems Governed by Codes

- .1 Identification:
  - .1 Natural gas: To CSA B149.1.
  - .2 Sprinklers: To NFPA (Fire) 13.
  - .3 Medical Gas: To CSA Z7396.1.

2.5 Identification of Piping Systems

- .1 Identify contents by background colour marking, legend; direction of flow by arrows. To CAN/CGSB-24.3 except where specified otherwise.
- .2 Legend:
  - .1 Block capitals to sizes and colours listed in CAN/CGSB-24.3.
- .3 Arrows showing direction of flow:
  - .1 Continuous wrap full diameter of pipe at each end of pipe identification markers.
- .4 Extent of background colour marking:
  - .1 To full circumference of pipe or insulation.
  - .2 Length to accommodate full length of legend and arrows.
- .5 Materials for background colour marking, legend, arrows:
  - .1 Pipes and tubing 3/4" and smaller: Waterproof and heat-resistant pressure sensitive plastic marker tags.
  - .2 All other pipes: Pressure sensitive plastic-coated cloth or vinyl with protective overcoating, waterproof contact adhesive undercoating, suitable for ambient of 100% RH and continuous operating temperature of 300°F and intermittent temperature of 400°F.
- .6 Colours and Legends:
  - .1 Where not listed, obtain direction from Engineer.

2.5 Identification of Piping Systems  
(Cont'd)

.6 (Cont'd)  
 .2 Colours for legends, arrows: To following table:

Background colour:	Yellow	Legend, arrows:	BLACK
	Green		WHITE
	Red		WHITE

.3 Background colour marking and legends for piping systems:

Contents	Background colour marking	Legend
Hot water heating supply	Yellow	HEATING SUPPLY
Hot water heating return	Yellow	HEATING RETURN
Domestic hot water supply	Green	DOM. HW SUPPLY
Dom. HWS recirculation	Green	DOM. HW CIRC
Domestic cold water supply	Green	DOM. CWS
		source)
Storm water	Green	STORM
Sanitary	Green	SAN.
Plumbing vent	Green	SAN. VENT

2.6 Identification Ductwork Systems  
Ductwork Systems

.1 150 mm (6") high stencilled letters and directional arrows 150 mm (6") long x 50 mm (2") high.  
 .2 Colours: Black, or co-ordinated with base colour to ensure strong contrast.

2.7 Mechanical Equipment, Valves  
 Controllers, Pumps,  
 Boilers, Fan Coil etc.  
Boilers, Fan Coil etc.

.1 Lamicoid tag with 13 mm (½") stamped identification data filled with black paint.  
 .2 Include flow diagrams for each system, of approved size, showing charts and schedules with identification of each tagged item, valve type, service, function, normal position, location of tagged item.  
 .3 Brass tags with 13 mm (½") stamped identification data filled with black paint.  
 .4 Brass tags to be stamped with system identification and valve number system as outlined below:

SYSTEM	BRASS TAG STAMP
Domestic Cold Water	DC-1,2, ...
Domestic Hot Water	DH-1,2, ...
Storm	ST-1,2, ...
Sanitary	SA-1,2, ...
Heating Water	HW-1,2, ...

2.8 Controls Components  
Identification

.1 Identify all systems, equipment, components, controls, sensors with system nameplates specified in this section.  
 .2 Inscriptions to include function and (where appropriate) fail-safe position.

2.9 Language .1 Identification to be in English.

### **PART 3 - EXECUTION**

3.1 Timing .1 Provide identification only after all painting specified in Architectural section is complete re: Interior Painting has been completed.

3.2 Installation .1 Perform work in accordance with CAN/CGSB-24.3 except as specified otherwise.  
.2 Provide ULC and CSA registration plates as required by respective agency.

3.3 Nameplates .1 Locations:  
.1 In conspicuous location to facilitate easy reading and identification from floor.  
operating  
.2 Standoffs:  
.1 Provide for nameplates on hot and/or insulated surfaces.  
.3 Protection  
.1 Do not paint, insulate or cover in any way.

3.4 Location of Identification on Piping and Ductwork Systems .1 On long straight runs in open areas in boiler rooms, equipment rooms, galleries, tunnels: At not more than 17 m (55 ft.) intervals and more frequently if required to ensure that at least one is visible from any one viewpoint in operating areas and walking aisles.  
.2 Adjacent to each change in direction.  
.3 At least once in each small room through which piping or ductwork passes.  
.4 On both sides of visual obstruction or where run is difficult to follow.  
.5 On both sides of separations such as walls, floors, partitions.  
.6 Where system is installed in pipe chases, ceiling spaces, galleries, other confined spaces, at entry and exit points, and at each access opening.  
.7 At beginning and end points of each run and at each piece of equipment in run.  
.8 At point immediately upstream of major manually operated or automatically controlled valves, dampers, etc. Where this is not possible, place identification as close as possible, preferably on upstream side.  
.9 Identification to be easily and accurately readable from usual operating areas and from access points.

- |   |     |   |
|---|-----|---|
| <u>3.4 Location of Identification on Piping and Ductwork Systems (Cont'd)</u> | .10 | Position of identification to be approximately at right angles to most convenient line of sight, considering operating positions, lighting conditions, risk of physical damage or injury and reduced visibility over time due to dust and dirt. |
|   | .11 | At branch take-offs on both main and branch.  |
| <u>3.5 Mechanical Equipment, Valves, Controllers</u>                          | .1  | Valves and operating controllers, except at plumbing fixtures, radiation, or where in plain sight of equipment they serve: Secure tags with non-ferrous chains or closed "S" hooks.   |
|   | .2  | Install one copy of flow diagrams, valve schedules mounted in frame behind non-glare glass where directed by Engineer. Provide one copy (reduced in size if required) in each operating and maintenance manual.                                 |
|   | .3  | Number valves in each system consecutively.   |

- END OF SECTION -

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 20 05 01 - Mechanical General Requirements, all mechanical sections, and all other disciplines related to the project.
- 1.2 References .1 American Society of Heating, Refrigerating, and Air-Conditioning Engineers (ASHRAE)  
.1 ANSI/ASHRAE 110-2016, Method of Testing Performance of Laboratory Fume Hoods.
- 1.3 General .1 TAB means to test, adjust and balance to perform in accordance with requirements of Contract Documents and to do all other work as specified in this section.
- 1.4 Qualifications of TAB Personnel .1 Names of all personnel it is proposed to perform TAB to be submitted to and approved by Engineer within 14 days of award of contract.  
.2 Provide documentation confirming qualifications, successful experience.  
.3 The following are acceptable TAB contractors:  
.1 Aerodynamics & Associates Testing Services Ltd. (N.B.C.T.A., ASHRAE)  
.2 Maxima Technical Services Inc.  
.3 Kanata Air Balancing & Engineering (C.A.A.B.C.)  
.4 Capital Airflow Ltd.  
.5 Brassard Adjustments & Calibrations Inc.  
.6 Evenflow Balancing Co.
- 1.5 Purpose of TAB .1 Test to verify proper and safe operation, determine actual point of performance, evaluate qualitative and quantitative performance of equipment, systems and controls at design, average and low loads using actual or simulated loads  
.2 Adjust and regulate equipment and systems so as to meet specified performance requirements and to achieve specified interaction with all other related systems under all normal and emergency loads and operating conditions.  
.3 Balance systems and equipment to regulate flow rates to match load requirements over full operating ranges.
- 1.6 Exceptions .1 TAB of systems and equipment regulated by codes, standards to be to satisfaction of authority having jurisdiction.

- 1.7 Co-ordination .1 Schedule time required for TAB (including repairs, re-testing) into project construction and completion schedule so as to ensure completion before acceptance of project.
- .2 Do TAB of each system independently and subsequently, where interlocked with other systems, in unison with those systems.
- .3 Coordinate TAB with controls, mechanical and electrical contractors.
- 1.8 Pre-TAB Review .1 Review contract documents before project construction is started and confirm in writing to Engineer adequacy of provisions for TAB and all other aspects of design and installation pertinent to success of TAB.
- .2 Review specified standards and report to Engineer in writing all proposed procedures which vary from standard.
- .3 During construction, co-ordinate location and installation of all TAB devices, equipment, accessories, measurement ports and fittings.
- 1.9 Start-up .1 Follow start-up procedures as recommended by equipment manufacturer unless specified otherwise.
- .2 Follow special start-up procedures specified elsewhere in Divisions 20, 21, 22, 23 & 25.
- 1.10 Operation of Systems During TAB .1 Operate systems for length of time required for TAB and as required by Engineer for verification of TAB reports.
- 1.11 Start of TAB .1 Notify Engineer 7 days prior to start of TAB.
- .2 Start TAB only when building is essentially completed, including:
- .1 Installation of ceilings, doors, windows, other construction affecting TAB.
  - .2 Application of weatherstripping, sealing, caulking.
  - .3 All pressure, leakage, other tests specified elsewhere in Divisions 20, 21, 22, 23 & 25.
  - .4 All provisions for TAB installed and operational.
- .3 Start-up, verification for proper, normal and safe operation of all mechanical and associated electrical and control systems affecting TAB including but not limited to:
- .1 Proper thermal overload protection in place for electrical equipment.
  - .2 Air systems:
    - .1 Filters in place, clean.
    - .2 Duct systems clean.
    - .3 Ducts, air shafts, ceiling plenums are airtight to within specified tolerances.
    - .4 Correct fan rotation.
    - .5 Fire, smoke, volume control dampers installed and open.

<u>1.11 Start of TAB (Cont'd)</u>	.3	(Cont'd)
	.2	(Cont'd)
	.6	Coil fins combed, clean.
	.7	Access doors, installed, closed.
	.8	All outlets installed, volume control dampers open.
	.3	Liquid systems:
	.1	Flushed, filled, vented.
	.2	Correct pump rotation.
	.3	Strainers in place, baskets clean.
	.4	Isolating and balancing valves installed, open.
	.5	Calibrated balancing valves installed, at factory settings.
	.6	Chemical treatment systems complete, operational.
<u>1.12 Application Tolerances</u>	.1	Do TAB to following tolerances of design values:
	.1	Laboratory HVAC systems: plus 10%, minus 0%.
	.2	All other HVAC systems: plus 5%, minus 5%.
	.3	Hydronic systems: plus or minus 10%.
<u>1.13 Accuracy Tolerances</u>	.1	Measured values to be accurate to within plus or minus 2% of actual values.
<u>1.14 Instruments</u>	.1	Prior to TAB, submit to Engineer list of instruments to be used together with serial numbers.
	.2	Calibrate in accordance with requirements of most stringent of referenced standard for either applicable system or HVAC system.
	.3	Calibrate within 3 months of TAB. Provide certificate of calibration to Engineer.
<u>1.15 Submittals</u>	.1	Submit, prior to commencement of TAB:
	.2	Proposed methodology and procedures for performing TAB if different from referenced standard.
<u>1.16 Preliminary TAB Report</u>	.1	Submit for checking and approval of Engineer, prior to submission of formal TAB report, sample of rough TAB sheets. Include:
	.1	Details of instruments used.
	.2	Details of TAB procedures employed.
	.3	Calculations procedures.
	.4	Summaries.
<u>1.17 TAB Report</u>	.1	Format to be in accordance with Associated Air Balancing Council (AABC/CAABC).

- 1.17 TAB Report (Cont'd) .2 TAB report to show all results in SI units or Imperial (IP), to match drawings and specifications, and to include:
- .1 Project record drawings.
  - .2 System schematics.
- .3 Submit pdf electronic copy of TAB Report to Engineer for verification and approval.
- 1.18 Verification .1 All reported results subject to verification by Engineer.
- .2 Provide manpower and instrumentation to verify up to 30% of all reported results.
  - .3 Number and location of verified results to be at discretion of Engineer.
  - .4 Bear costs to repeat TAB as required to satisfaction of Engineer.
  - .5 At request of commissioning agent, provide manpower and instrumentation to verify an additional 30% of all reported results.
- 1.19 Settings .1 After TAB is completed to satisfaction of Engineer, replace drive guards, close all access doors, lock all devices in set positions, ensure sensors are at required settings.
- .2 Permanently mark all settings to allow restoration at any time during life of facility. Markings not to be eradicated or covered in any way.
- 1.20 Completion of TAB .1 TAB to be considered complete only when final TAB Report received and approved by Engineer.
- 1.21 Systems .1 Quality assurance: Perform TAB under direction of supervisor qualified by AABC.
- .2 Air Systems: Include both specified and measured data.
    - .1 Air Handling Equipment:
      - .1 Maximum air flow volume.
      - .2 Fan total pressure.
      - .3 Motor volts, amps and power.
      - .4 Fan rotational speed.
      - .5 Fan Power, calculate fan efficiency.
      - .6 Equipment static pressure profile.
      - .7 Noise.
    - .2 Duct Air Quantities - Mains and Branches:
      - .1 Duct size.
      - .2 Number of pressure/velocity readings per traverse.
      - .3 Sum of velocity measurements.
      - .4 Average velocity.
      - .5 Duct air flow volume.
      - .6 Barometric pressure and duct air temperature.

- 1.21 Systems (Cont'd) .2 (Cont'd)
- .3 Air Outlets/Inlets
    - .1 Outlet location and designation.
    - .2 Manufacturers catalogue identification and type.
    - .3 Air outlet flow factors. Use 1.0 when flow hood is used.
    - .4 Air flow volumes.
    - .5 Deflector vane or diffuser cone settings.
  - .4 Laboratory fume hoods:
    - .1 TAB procedures: as described in standard.
- .3 Hydronic Systems: Include both specified and measured data.
- .1 Heating Equipment:
    - .1 Equipment type, location and designation.
    - .2 Fluid used. Identify fluid used; water, % water/ethylene glycol mixes, steam, etc.
    - .3 Fluid flow rate.
    - .4 Fluid Specific Heat, at mean temperature.
    - .5 Fluid Specific Gravity, at mean temperature.
    - .6 Fluid entering and leaving temperatures and pressures.
    - .7 Heat transfer rate.
- 1.22 Plumbing Systems .1 Inlet and outlet temperature of each heater or tank.
- .2 Main supply piping main branch piping.
  - .3 Flush valves adjusted to suit project pressure conditions.

## **PART 2 - PRODUCTS**

- 2.1 Not Used .1 Not used.

## **PART 3 - EXECUTION**

- 3.1 Balancing and Adjusting Preparation .1 Perform testing, adjusting and balancing work after equipment and systems starting procedures have been properly completed.
- .2 Perform balancing during heating and cooling season of first year of operation, and at times when directed by Engineer, to ensure proper settings of controls under both summer and winter peak load conditions.
  - .3 Vary load to verify operation of system under partial load conditions. Test start-up, shut-down, emergency conditions, safety controls operation and automatic and manual resets and interlocks.

3.1 Balancing and  
Adjusting Preparation  
(Cont'd)

.4 Cap all instrument test ports. Obtain caps from sheet metal contractor and install.

- END OF SECTION -

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 20 05 01 - Mechanical General Requirements, all mechanical sections, and all other disciplines related to the project. Mechanical General Requirements, all mechanical sections, and all other disciplines related to the project.
- 1.2 References .1 American Society for Testing and Materials (ASTM).  
.1 ASTM C335/C335M-10e1, Test Method for Steady State Heat Transfer Properties of Horizontal Pipe Insulation.  
.2 ASTM C449-07(2013), Standard Specification for Mineral Fiber-Hydraulic-Setting Thermal Insulating and Finishing Cement.  
.3 ASTM C921-10(2015), Standard Practice for Determining the Properties of Jacketing Materials for Thermal Insulation.
- .2 Canadian General Standards Board (CGSB)  
.1 CAN/CGSB-51.10-92, Mineral Fibre Board Thermal Insulation.  
.2 CAN/CGSB-51.11-92, Mineral Fibre Thermal Insulation Blanket.  
.3 CGSB 51-GP-52Ma, Vapour Barrier, Jacket and Facing Material for Pipe, Duct and Equipment Thermal Insulation.
- .3 Manufacturer's Trade Associations: Thermal Insulation Association of Canada (TIAC): National Insulation Standards.
- .4 Underwriters Laboratories of Canada (ULC)  
.1 CAN/ULC S102-10, Surface Burning Characteristics of Building Materials and Assemblies.
- 1.3 Definitions .1 For purposes of this section:  
.1 "CONCEALED" - insulated mechanical services and equipment in suspended ceilings and non-accessible chases and furred-in spaces.  
.2 "EXPOSED" - will mean "not concealed" as defined herein.  
.3 Insulation systems - insulation material, fasteners, jackets, and other accessories.
- .2 TIAC Codes:  
.1 CRD: Code Round Ductwork,  
.2 CRF: Code Rectangular Finish.
- 1.4 Shop Drawings .1 Submit shop drawings in accordance with Section 20 05 01 - Mechanical General Requirements.
- .2 Submit for approval manufacturer's catalogue literature related to installation, fabrication for duct jointing recommendations.

- |   |    |  |
|---|----|--|
| <u>1.5 Manufacturer's Instructions</u>    | .1 | Submit manufacturer's installation instructions in accordance with Section 20 05 01 - Mechanical General Requirements, if requested by Engineer.                         |
|   | .2 | Installation instructions to include procedures to be used, installation standards to be achieved.   |
|   |    |  |
| <u>1.6 Qualifications</u>                 | .1 | Installer to be specialist in performing work of this section, and have at least 5 years successful experience in this size and type of project, qualified to standards. |
|   |    |  |
| <u>1.7 Delivery, Storage and Handling</u> | .1 | Deliver materials to site in original factory packaging, labelled with manufacturer's name, address.   |
|   | .2 | Protect from weather and construction traffic.   |
|   | .3 | Protect against damage from any source.  |
|   | .4 | Store at temperatures and conditions required by manufacturer.   |

## **PART 2 - PRODUCTS**

- |                                  |    |  |
|----------------------------------|----|--|
| <u>2.1 Fire and Smoke Rating</u> | .1 | In accordance with CAN/ULC S102:<br>.1 Maximum flame spread rating: 25.<br>.2 Maximum smoke developed rating: 50.  |
|                                  |    |  |
| <u>2.2 Insulation</u>            | .1 | Mineral fibre as specified herein includes glass fibre, rock wool, slag wool.  |
|                                  | .2 | Thermal conductivity ("k" factor) not to exceed specified values at 24°C mean temperature when tested in accordance with ASTM C335/C335M.  |
|                                  | .3 | TIAC Code C-1: Rigid mineral fibre board to CAN/CGSB-51.10, with factory applied vapour retarder jacket to CGSB 51-GP-52Ma (as scheduled in PART 3 of this Section).   |
|                                  | .4 | TIAC Code C-2: Mineral fibre blanket to CAN/CGSB-51.11 faced with factory applied vapour retarder jacket to CGSB 51-GP-52Ma (as scheduled in PART 3 of this section).<br>.1 Mineral fibre: to CAN/CGSB-51.11.<br>.2 Jacket: to CGSB 51-GP-52Ma.<br>.3 Maximum "k" factor: to CAN/CGSB-51.11.<br>.4 Density: 24 kg/m <sup>3</sup> . |
|                                  |    |  |
| <u>2.3 Jackets</u>               | .1 | Canvas: 220 gm/m <sup>2</sup> cotton, plain weave, treated with dilute fire retardant lagging adhesive to ASTM C921.   |

- 2.3 Jackets (Cont'd) .2 Lagging adhesive: Compatible with insulation.
- 2.4 Accessories .1 Vapour retarder lap adhesive: Water based, fire retardant type, compatible with insulation.
- .2 Indoor Vapour Retarder Finish: Vinyl emulsion type acrylic, compatible with insulation.
- .3 Insulating Cement: hydraulic setting on mineral wool, to ASTM C449.
- .4 Outdoor Vapour Retarder Mastic:  
.1 Vinyl emulsion type acrylic, compatible with insulation.  
.2 Reinforcing fabric: Fibrous glass, untreated 305 g/m<sup>2</sup>.
- .5 Tape: self-adhesive, aluminum, reinforced, 75 mm (3") wide minimum.
- .6 Contact adhesive: quick-setting
- .7 Canvas adhesive: washable.
- .8 Tie wire: 1.5 mm stainless steel.
- .9 Banding: 19 mm (3/4") wide, 0.5 mm thick stainless steel.
- .10 Facing: 25 mm (1") galvanized steel hexagonal wire mesh stitched on one face of insulation.
- .11 Fasteners: 2 mm diameter pins with 38 mm (1½") diameter clips, length to suit thickness of insulation.

### **PART 3 - EXECUTION**

- 3.1 Pre- installation Requirements .1 Pressure testing of ductwork systems to be complete, witnessed and certified.
- .2 Surfaces to be clean, dry, free from foreign material.
- 3.2 Installation .1 Install in accordance with TIAC National Standards.
- .2 Apply materials in accordance with manufacturers instructions and this specification.
- .3 Use two layers with staggered joints when required nominal thickness exceeds 75 mm (3").
- .4 Maintain uninterrupted continuity and integrity of vapour retarder jacket and finishes.  
.1 Hangers, supports to be outside vapour retarder jacket.

<u>3.2 Installation (Cont'd)</u>	.5	Supports, Hangers in accordance with Section 23 05 29 - Bases, Hangers and Supports
	.1	Apply high compressive strength insulation where insulation may be compressed by weight of ductwork.
	.6	Fasteners: At 300 mm (12") oc in horizontal and vertical directions, minimum two rows each side.
<u>3.3 Ductwork Insulation Schedule</u>	.1	Insulation types and thicknesses: Conform to following table:
		TIAC Vapour Retarder
		Thickness Code mm (in.)
		Exhaust ducts within 3 m from roof/exterior wall C-1 yes 50 (2")
	.2	Finishes: Conform to following table:
		TIAC Code
		Indoor, concealed Rectangular Round
		none none

  - .3 ASTM C449-07(2013), Standard Specification for Mineral Fiber-Hydraulic-Setting Thermal Insulating and Finishing Cement.
  - .4 ASTM C921-10(2015), Practice for Determining the Properties of Jacketing Materials for Thermal Insulation.
- .2 Canadian General Standards Board (CGSB)
- .1 CAN/CGSB-51.2-95, Thermal Insulation, Calcium Silicate, for Piping, Machinery and Boilers.
  - .2 CAN/CGSB-51.9-92 Mineral Fibre Thermal Insulation for Piping and Round Ducting.
  - .3 CAN/CGSB-51.11-92, Mineral Fibre Thermal Insulation Blanket.
  - .4 CAN/CGSB-51.12-95, Cement, Thermal Insulating and Finishing.
  - .5 CAN/CGSB-51.40-95, Thermal Insulation, Flexible, Elastomeric, Unicellular, Sheet and Pipe Covering.
  - .6 CGSB 51-GP-52Ma, Vapour Barrier, Jacket and Facing Material for Pipe, Duct and Equipment Thermal Insulation.
- .3 Manufacturer's Trade Associations (latest edition).
- .1 Thermal Insulation Association of Canada (TIAC): National Insulation Standards.
- .4 Underwriters' Laboratories of Canada (ULC)
- .1 CAN/ULC S102-10, Surface Burning Characteristics of Building Materials and Assemblies.
- 1.3 Definitions .1 For purposes of this section:
- .1 "CONCEALED" - insulated mechanical services in suspended ceilings and non-accessible chases and furred-in spaces.
  - .2 "EXPOSED" - will mean "not concealed" as defined herein.
- .2 TIAC ss:
- .1 CRF: Code Rectangular Finish.
  - .2 CPF: Code Piping Finish.

- 1.4 Shop Drawings .1 Submit shop drawings in accordance with Section 20 05 01 - Mechanical General Requirements.
- .2 Submit for approval manufacturer's catalogue literature related to installation, fabrication for pipe, fittings, valves and jointing recommendations.
- 1.5 Samples .1 Submit samples in accordance with Section 20 05 01 - Mechanical General Requirements.
- .2 Submit for approval: complete assembly of each type of insulation system, insulation, coating, and adhesive proposed. Mount sample on 12 mm (½") plywood board. Affix typewritten label beneath sample indicating service.
- 1.6 Manufacturer's Instructions .1 Submit manufacturer's installation instructions in accordance with Section 20 05 01 - Mechanical General Requirements.
- .2 Installation instructions to include procedures to be used, installation standards to be achieved.
- 1.7 Qualifications .1 Installer to be specialist in performing work of this section, and have at least 5 years successful experience in this size and type of project, qualified to standards.
- 1.8 Delivery, Storage and Handling .1 Deliver materials to site in original factory packaging, labelled with manufacturer's name, address.
- .2 Protect from weather, construction traffic.
- .3 Protect against damage from any source.
- .4 Store at temperatures and conditions required by manufacturer.

## **PART 2 - PRODUCTS**

- 2.1 Fire and Smoke Rating .1 In accordance with CAN/ULC S102:
- .1 Maximum flame spread rating: 25.
- .2 Maximum smoke developed rating: 50.
- 2.2 Insulation .1 Mineral fibre as specified herein includes glass fibre, rock wool, slag wool.
- .2 Thermal conductivity ("k" factor) not to exceed specified values at 24°C mean temperature when tested in accordance with ASTM C335/C335M.

<u>2.2 Insulation (Cont'd)</u>	.3	TIAC Code A-1: Rigid moulded mineral fibre without factory applied vapour retarder jacket (as scheduled in PART 3 of this section). .1 Mineral fibre: to CAN/CGSB-51.9. .2 Maximum "k" factor: to CAN/CGSB-51.9.
	.4	TIAC Code A-3: Rigid moulded mineral fibre with factory applied vapour retarder jacket (as scheduled in PART 3 of this section). .1 Mineral fibre: to CAN/CGSB-51.9. .2 Jacket: to CGSB 51-GP-52Ma. .3 Maximum "k" factor: to CAN/CGSB-51.9.
	.5	TIAC Code C-2: Mineral fibre blanket faced with factory applied vapour retarder jacket (as scheduled in PART 3 of this section). .1 Mineral fibre: to CAN/CGSB-51.11. .2 Jacket: to CGSB 51-GP-52Ma. .3 Maximum "k" factor: to CAN/CGSB-51.11. .4 Density: 24 kg/m <sup>3</sup> .
	.6	TIAC Code A-6: Flexible unicellular tubular elastomer. .1 Insulation: to CAN/CGSB-51.40 with vapour retarder jacket.
	.7	TIAC Code A-2: Rigid moulded calcium silicate in sections and blocks, and with special shapes to suit project requirements. .1 Insulation: to CAN/CGSB-51.2. .2 Maximum "k" factor: to CAN/CGSB-51.2. .3 Design to permit periodic removal and re-installation.
<u>2.3 Insulation Securement</u>	.1	Tape: Self-adhesive, aluminum, reinforced, 50 mm wide minimum.
	.2	Contact adhesive: Quick setting.
	.3	Canvas adhesive: Washable.
	.4	Tie wire: 1.5 mm diameter stainless steel.
	.5	Bands: Stainless steel, 19 mm wide, 0.5 mm thick.
<u>2.4 Cement</u>	.1	Thermal insulating and finishing cement: .1 To CAN/CGSB-51.12. .2 Hydraulic setting or Air drying on mineral wool, to ASTM C449.
<u>2.5 Vapour Retarder Lap Adhesive</u>	.1	Water based, fire retardant type, compatible with insulation.
<u>2.6 Indoor Vapour Retarder Finish</u> GWA 2016-187	.1	Vinyl emulsion type acrylic, compatible with insulation.

- 2.7 Jackets
- .1 Canvas:
    - .1 220 gm/m<sup>2</sup> cotton, plain weave, treated with dilute fire retardant lagging adhesive to ASTM C921.
    - .2 Lagging adhesive: Compatible with insulation.
    - .3 Random samples to be taken during installation c/w date & time on sample.
  - .2 Aluminum:
    - .1 To ASTM B209.
    - .2 Thickness: 0.50 mm sheet.
    - .3 Finish: embossed.
    - .4 Joining: Longitudinal and circumferential slip joints with 50 mm laps.
    - .5 Fittings: 0.5 mm thick die-shaped fitting covers with factory-attached protective liner.
    - .6 Metal jacket banding and mechanical seals: stainless steel, 19 mm wide, 0.5 mm thick at 300 mm spacing.
  - .3 PVC:
    - .1 Ontario Building Code compliant for 25/50 flame spread and smoke developed.
    - .2 Minimum thickness 0.015 mil.
    - .3 Colour white unless otherwise specified.
    - .4 Non yellowing UV stabilized.
    - .5 Minimum service temperatures: -20°C.
    - .6 Maximum service temperature: 65°C.
    - .7 Moisture vapour transmission: 0.02 perm.
    - .8 Fastenings:
      - .1 Use solvent weld adhesive compatible with insulation to seal laps and joints.
      - .2 Tacks.
      - .3 Pressure sensitive vinyl tape of matching colour.

### **PART 3 - EXECUTION**

- 3.1 Pre- Installation Requirement
- .1 Pressure testing of piping systems and adjacent equipment to be complete, witnessed and certified.
  - .2 Surfaces to be clean, dry, free from foreign material.
- 3.2 Installation
- .1 Install in accordance with TIAC National Standards.
  - .2 Apply materials in accordance with manufacturers instructions and this specification.
  - .3 Use two layers with staggered joints when required nominal wall thickness exceeds 75 mm.
  - .4 All roof drain bodies shall be thermally insulated with 50 mm thick mineral fibre blanket faced with factory applied vapour retarder jacket.
  - .5 Maintain uninterrupted continuity and integrity of vapour retarder jacket and finishes.
    - .1 Hangers, supports to be outside vapour retarder jacket.

- 3.2 Installation (Cont'd)
- .5 (Cont'd)
    - .2 Saddles to have ridges to limit movement while in hanger.
    - .3 To be edge flared to prevent cutting/damage to insulation coverage.
  - .6 Supports, Hangers:
    - .1 Apply high compressive strength insulation, suitable for service, at oversized saddles and shoes where insulation saddles have not been provided.
- 3.3 Removable, Pre-fabricated, Insulation and Enclosures
- .1 Application: At expansion joints, valves, primary flow measuring elements flanges and unions at equipment.
  - .2 Design: To permit movement of expansion joint and to permit periodic removal and replacement without damage to adjacent insulation.
  - .3 Insulation:
    - .1 Insulation, fastenings and finishes: same as system.
    - .2 Jacket: PVC.
- 3.4 Installation of Elastomeric Insulation
- .1 Insulation to remain dry at all times. Overlaps to manufacturers instructions. Ensure tight joints.
  - .2 Provide vapour retarder as recommended by manufacturer.
- 3.5 Piping Insulation Schedules
- .1 Includes valves, valve bonnets, strainers, flanges and fittings unless otherwise specified.
  - .2 TIAC Code: A-1.
    - .1 Securements: Tape at 300 mm oc.
    - .2 Seals: lap seal adhesive, lagging adhesive.
    - .3 Installation: TIAC Code 1501-H.
  - .3 TIAC Code: A-3.
    - .1 Securements: Tape at 300 mm oc.
    - .2 Seals: VR lap seal adhesive, VR lagging adhesive.
    - .3 Installation: TIAC Code: 1501-C.
  - .4 TIAC Code: A-6.
    - .1 Insulation securements: Bands.
    - .2 Seals: lap seal adhesive, lagging adhesive.
  - .5 TIAC Code: C-2.
    - .1 Insulation securements: combination of wire and bands.
    - .2 Seals: lap seal adhesive, lagging adhesive.
    - .3 Installation: TIAC Code: 1501-C.

3.5 Piping Insulation  
 Schedules  
 (Cont'd)

- .6 TIAC Code: A-2.  
 .1 Insulation securements: stainless steel bands.  
 .2 Seals: lap seal adhesive, lagging adhesive.  
 .3 Installation: TIAC Code: 1501-H.
- .7 Thickness of insulation to be as listed in following table:
- | Application                            | Temp<br>°C | TIAC<br>code | Pipe sizes (NPS) and<br>insulation thickness (mm) |            |           |             |
|--|------------|--------------|---|------------|-----------|-------------|
|  |            |              | ½ to<br>1¼  | 1½<br>to 3 | 4<br>to 6 | 8 &<br>over |
| Hot Water Heating                      | 61 - 93    | A-1          | 38  | 50         | 50        | 50          |
| Hot Water Heating                      | up to 60   | A-1          | 25  | 38         | 38        | 38          |
| Domestic Hot Water                     |            | A-1          | 25  | 38         | 38        | 38          |
| Heating/Cooling with<br>Vapour Barrier |            | A-3          | 25  | 38         | 38        | 38          |
| Domestic Cold Water                    |            | A-3          | 25  | 25         | 25        | 25          |
| On top of Radiant<br>Panels            |            | C-2          | -----50-----                                      |            |           |             |
- .8 Finishes:  
 .1 Exposed indoors: Canvas, except generator exhaust shall be aluminum.  
 .2 Exposed piping & fittings in mechanical rooms: PVC.  
 .3 Exposed exterior: Aluminum.  
 .4 Concealed, indoors: PVC on valves and fittings only. No further finish.  
 .5 Use vapour retarder jacket on TIAC code A-3 insulation compatible with insulation.  
 .6 Finish attachments: Stainless steel bands at 150 mm oc. Seals: wing or closed.  
 .7 Installation: To appropriate TIAC code CRF/1 through CPF/5.
- .9 Storm piping & fittings to be insulated from all roof drain bodies to storm piping at grade level.
- .10 Domestic hot & cold and recirc piping shall be completely thermally insulated to fixtures, except exposed supply assembly at fixtures.

- END OF SECTION -

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 20 05 01 - Mechanical General Requirements, all mechanical sections, and all other disciplines related to the project.

## **PART 2 - PRODUCTS**

- 2.1 Control Air Tubing .1 Plastic: flame retardant PVC tubing with minimum burst gauge pressure of 1.4 MPa at 80 degrees C.
- .2 Copper: type L complete with flared fittings.
- 2.2 Thermostats .1 Wall mounted, direct or reverse acting, to match existing. Existing pneumatic thermostats to be reused.

## **PART 3 - EXECUTION**

- 3.1 Manufacturer's Instructions .1 Compliance: comply with manufacturer's written recommendations or specifications, including product technical bulletins, handling, storage and installation instructions, and datasheet.
- 3.2 Installation .1 Identify and code pneumatic tubing at every branch and at each piece of equipment and components.
- .2 Use copper tubing with flared fittings in following locations:
- .1 Inaccessible areas.
  - .2 Where single lines travel from tube tray to instruments.
  - .3 Areas of heat above 80 degrees C.
  - .4 Mechanical rooms.
  - .5 Rooms where piping subject to damage.
  - .6 Adjacent to heating pipes passing through common sleeve.
  - .7 Where air pressures above 200 kPa.
  - .8 Where codes will not permit use of PVC.
  - .9 In fire rated walls and ceilings.
- .3 Follow building lines. Do not cover with insulation. Install drip legs and drains at low points.

3.3 Field Quality Control .1

Start-Up and Adjustment:

- .1 Upon completion of installation, test, adjust and regulate controls or safety equipment provided under this Section.
- .2 Adjust and place in operating condition.

- END OF SECTION -

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 20 05 01 - Mechanical General Requirements, all mechanical sections, and all other disciplines related to the project.
- 1.2 References .1 American Society of Mechanical Engineers (ASME)  
.1 ASME B16.15-2013, Cast Bronze Threaded Fittings: Classes 125 and 250.  
.2 ASME B16.18-2012, Cast Copper Alloy, Solder Joint Pressure Fittings.  
.3 ASME B16.22-2013, Wrought Copper and Copper-Alloy Solder Joint Pressure Fittings.
- .2 American Society for Testing and Materials (ASTM)  
.1 ASTM B32-08(2014), Specification for Solder Metal.  
.2 ASTM B88M-13, Specification for Seamless Copper Water Tube Metric.  
.3 ASTM E202-12, Test Methods for Analysis of Ethylene Glycols and Propylene Glycols.
- .3 American Welding Society (AWS)  
.1 AWS A5.8/A5.8M:2011-AMD 1, Specification Filler Metals for Brazing and Bronze Welding.
- 1.3 Shop Drawings .1 Submit shop drawings in accordance with Section 20 05 01 - Mechanical General Requirements.
- 1.4 Maintenance Data .1 Provide maintenance data for incorporation into manual specified in Section 20 05 01 - Mechanical General Requirements.

## **PART 2 - PRODUCTS**

- 2.1 Piping .1 Type L hard drawn copper: to ASTM B88M.
- 2.2 Fittings .1 Cast bronze threaded fittings: to ASME B16.15.  
.2 Wrought copper and copper alloy solder joints pressure fittings: to ASME B16.22.  
.3 Cast copper alloy solder joint pressure fittings: to ASME B16.18.
- 2.3 Di-Electric Couplings .1 Provide wherever pipes of dissimilar metals are jointed.

- 2.3 Di-Electric Couplings (Cont'd) .2 For pipe sizes 2 NPS and under, provide di-electric unions or couplings.
- 2.4 Joints .1 Solder, tin-antimony, 95:5: to ASTM B32.  
.2 Silver solder BCUP: to AWS A5.8.  
.3 Brazing: as indicated.  
.4 Application: All closed loop hydronic systems except steam & condensate systems].
- 2.5 Valves .1 Refer to Section 23 05 23 - Valves.

### **PART 3 - EXECUTION**

- 3.1 Piping Installation .1 Connect to equipment in accordance with manufacturer's instruction unless otherwise indicated.  
.2 Install concealed pipes close to building structure to keep furring space to minimum. Install to conserve headroom and space. Run exposed piping parallel to walls. Group piping wherever practical.  
.3 Slope piping in direction of drainage and for positive venting.  
.4 Use eccentric reducers at pipe size change installed to provide positive drainage or positive venting.  
.5 Provide clearance for installation of insulation and access for maintenance of equipment, valves and fittings.  
.6 Ream pipes, clean scale and dirt, inside and outside, before and after assembly.  
.7 Assemble piping using fittings manufactured to ASME standards.  
.8 Saddle type branch fittings may be used on mains if branch line is no larger than half the size of main. Hole saw or drill and ream main to maintain full inside diameter of branch line prior to welding saddle.  
.9 Install all pipe wells or other devices supplied by Section 25 01 11.
- 3.2 Flushing and Cleaning .1 As new pipework to be flushed, cleaned and refilled to approval of Engineer.

- 3.3 Testing .1 Test system in accordance with Section 23 05 05 - Installation of Pipework.
- .2 For glycol systems, retest with specified quality of glycol after cleaning. Repair any leaking joints, fittings or valves.
- 3.4 Balancing .1 Install flow measuring stations and flow balancing valves as indicated.
- .2 Refer to Section 23 05 93 - Testing Adjusting and Balancing of Systems for applicable procedures.

- END OF SECTION -

- 1.3 Shop Drawings .1 Submit shop drawings in accordance with Section 20 05 01 - Mechanical General Requirements.
- 1.4 Closeout Submittals .1 Provide maintenance data for incorporation into manual specified in Section 20 05 01 - Mechanical General Requirements.

## **PART 2 - PRODUCTS**

- 2.1 Pipe .1 Steel pipe: to ASTM A53/A53M, Grade B, as follows:  
.1 NPS 2½ to 10, Schedule 40.  
.2 NPS 12 and over, standard schedule.

- 2.2 Pipe Joints .1 Application: Hydronic water & glycol systems: NPS 2½ and over. Steam & Condensate systems refer to Section 23 22 13 - Steel Piping Valves Fittings Steam and Condensate up to 860 kPa,
- .1 NPS 2 and under: shall be copper - refer to Section 23 21 13.01 - Copper Piping and Fittings - Hydronic Systems.
  - .2 Cooling systems NPS 2½ and over: welded, flanged or grooved mechanical couplings. No grooved coupling on glycol systems.
  - .3 Heating and glycol systems NPS 2½ and over: welded or flanged. Grooved joints are not accepted.
  - .4 Welding fittings and flanges to CSA W47.1. Reference Section 23 05 17 - Pipe Welding.
  - .5 Flanges: raised face, weld neck.
  - .6 Flange gaskets: to AWWA C111/A21.11.
  - .7 Pipe thread: taper.
  - .8 Bolts and nuts: to ASME B18.2.1 and ASME B18.2.2.
  - .9 Grooved mechanical couplings c/w stainless steel hardware as manufactured by Victaulic are acceptable as listed. Style 07; ZeroFlex for rigid connections. Style 77 for flexible connections.

- 2.3 Fittings .1 Screwed fittings: malleable iron, to ASME B16.3, Class 150.
- .2 Pipe flanges and flanged fittings:
- .1 Cast iron: to ASME B16.1, Class 125.
  - .2 Steel: to ASME B16.5.
- .3 Butt-welding fittings: steel, to ASME B16.9.
- .4 Unions: malleable iron, to ASTM A47/A47M and ASME B16.3.
- .5 Fittings for roll grooved piping: malleable iron to ASTM A47/A47M, ductile iron to ASTM A536, manufactured by Victaulic are acceptable as listed.

- 2.4 Valves .1 Refer to Section 23 05 23 - Valves.

### **PART 3 - EXECUTION**

- 3.1 Applications .1 For hydronic closed loop water & glycol systems, perform welding in accordance with ASME.

- 3.2 Piping Installation .1 In accordance with Section 23 05 05 - Installation of Pipework.

- 3.3 Flushing, Cleaning and Filling System .1 All new pipework to be flushed, cleaned and refilled to approval of Engineer.
- 3.4 Testing .1 Test system in accordance with Section 23 05 05 - Installation of Pipework.
- 3.5 Balancing .1 Refer to Section 23 05 93 - Testing Adjusting and Balancing for applicable procedures.

- END OF SECTION -

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 20 05 01 - Mechanical General Requirements, all mechanical sections, and all other disciplines related to the project.
- 1.2 References .1 American Society for Testing and Materials (ASTM)  
.1 ASTM A278/A278M-01(2015), Standard Specification for Gray Iron Castings for Pressure-Containing Parts for Temperatures Up to 650 degrees F (350 degrees C).  
.2 ASTM B62-17, Specification for Composition Bronze or Ounce Metal Castings.
- 1.3 Product Data .1 Submit product data in accordance with Section 20 05 01 - Mechanical General Requirements.
- 1.4 Shop Drawings .1 Submit shop drawings in accordance with Section 20 05 01 - Mechanical General Requirements.
- 1.5 Closeout Submittals .1 Submit maintenance data in accordance with Section 20 05 01 - Mechanical General Requirements.

## **PART 2 - PRODUCTS**

- 2.1 Automatic Air Vent .1 System vents (hot water, glycol & chilled water):  
.1 Industrial float vent: cast iron body and NPS 3/4 connection and rated at 1034 kPa working pressure.  
.2 Float: solid material suitable for 115°C working temperature.  
.3 Acceptable materials: Spirax/Sarco Model 13WS.
- .2 Coil Vents (all equipment headers & high points in system):  
.1 Industrial float vent: brass alloy body and NPS 1/2 connection and rated at 1034 kPa working pressure.  
.2 Float: stainless steel with viton rubber valve seal suitable for 115°C working temperature.  
.3 Acceptable materials: Spirax/Sarco Model AE30.
- 2.2 Pipe Line Strainer .1 NPS 1/2 to 2: bronze body to ASTM B62, Class 250 screwed connections.  
.2 NPS 2-1/2 to 12: cast steel body to ASTM A278M, Class 250, flanged connections.

- 2.2 Pipe Line Strainer (Cont'd)
- .3 Blowdown connection: NPS 1.
  - .4 Screen: stainless steel with perforations between 5 mm and 6 mm.
  - .5 Working pressure: 1034 kPa (150 psi).
  - .6 Acceptable material: Crane, Watts, Victaulic, Kitz, Jenkins, Toyo, Conbraco.

### **PART 3 - EXECUTION**

- 3.1 General
- .1 Install as indicated and to manufacturer's recommendations.
  - .2 Run drain lines and blow off connections to terminate above nearest drain.
  - .3 Maintain proper clearance to permit service and maintenance.
  - .4 Should deviations beyond allowable clearances arise, request and follow Engineer's directive.
  - .5 Check shop drawings for conformance of all tapings for ancillaries and for equipment operating weights.
  - .6 During filling of hydronic systems or equipment, vent systems & equipment properly to remove air prior to opening equipment piping to overall system. Air propagating to system, will be the responsibility of contractor to remove.

- 3.2 Strainers
- .1 Install in horizontal or down flow lines.
  - .2 Ensure clearance for removal of basket.
  - .3 Install ahead of each pump.
  - .4 Install ahead of each automatic control valve and radiation and as indicated.

- 3.3 Automatic Air Vents
- .1 Install automatic air vents at high points of piping systems.
  - .2 Install full port ball at each automatic air vent.
  - .3 Air vents must have minimum connection of 13 mm (½").

- END OF SECTION -

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 20 05 01 - Mechanical General Requirements, all mechanical sections, and all other disciplines related to the project.
- 1.2 References .1 American Society for Testing and Materials (ASTM)

- .3 National Fire Protection Association (NFPA)  
.1 NFPA (Fire) 90A, Installation of Air Conditioning and Ventilating Systems, 2015 Edition.  
.2 NFPA (Fire) 90B, Installation of Warm Air Heating and Air Conditioning Systems, 2015 Edition.
- .4 Sheet Metal and Air Conditioning Contractors' National Association (SMACNA)  
.1 SMACNA 016-2012, HVAC Air Duct Leakage Test Manual, 2nd Edition.
- 1.3 Shop Drawings and Product Data .1 Submit shop drawings and product data in accordance with Section 20 05 01 - Mechanical General Requirements.
- .2 Indicate following:  
.1 Sealants  
.2 Tape  
.3 Proprietary Joints
- 1.4 Certification of Ratings .1 Catalogue or published ratings shall be those obtained from tests carried out by manufacturer or independent testing agency signifying adherence to codes and standards.

## **PART 2 - PRODUCTS**

- 2.1 Seal Classification .1 Classification as follows:  
Maximum  
System  
Total                      SMACNA  
Pressure                      Seal  
Pa                              Class  
500                              A  
250                              A  
125                              A
- .2 Seal classification:  
.1 Class A: longitudinal seams, transverse joints, duct wall penetrations and connections made airtight with sealant.
- .3 Application:  
.1 All new & existing supply ductwork.  
.2 All new return & exhaust ductwork.
- 2.2 Sealant .1 Sealant: oil resistant, polymer type flame resistant duct sealant. Temperature range of minus 22°F to plus 200°F.  
.1 Acceptable material: Duro Dyne S-2.
- 2.3 Duct Leakage .1 In accordance with SMACNA 016.
- 2.4 Fittings .1 Fabrication: to SMACNA.
- .2 Radiused elbows:  
.1 Rectangular: standard radius: 1.5 times width of duct.  
.2 Round: 1.5 times diameter.
- .3 Mitred elbows, rectangular:  
.1 To 400 mm (16"): with single thickness turning vanes.  
.2 Over 400 mm (16"): with double thickness turning vanes.
- .4 Branches:  
.1 Rectangular main and branch: with 45° entry on branch.  
.2 Round main and branch: enter main duct at 45° with conical connection.  
.3 Provide volume control damper in branch duct near connection to main duct.
- .5 Transitions:  
.1 Diverging: 20° maximum included angle.  
.2 Converging: 30° maximum included angle.

- 2.4 Fittings (Cont'd)
- .6 Offsets:
    - .1 Full radiused elbows.
  - .7 Obstruction deflectors: maintain full cross-sectional area. Maximum included angles: as for transitions.
- 2.5 Firestopping
- .1 Retaining angles all around duct, on both sides of fire separation.
  - .2 Firestopping material and installation must not distort duct.
- 2.6 Galvanized Steel
- .1 Lock forming quality: to ASTM A924/A924M, Z90 zinc coating.
  - .2 Thickness, fabrication and reinforcement: to SMACNA.
  - .3 Joints: to SMACNA.
- 2.7 Escutcheon Angles
- .1 40 mm x 40 mm angle iron frame on both sides of exposed rectangular or round ducts, on both sides of non-rated partitions. Escutcheon angles material & gauge shall be equal to base material.
- 2.8 Hangers and Supports
- .1 Strap hangers: of same material as duct but next sheet metal thickness heavier than duct. Maximum size duct supported by strap hanger: 500 mm (20").
  - .2 Hanger configuration: to SMACNA.
  - .3 Hangers: black steel angle with black steel rods to SMACNA and following table:

Duct Size (in.)	Angle Size (in.)	Rod Size (in.)
up to 30	1 x 1 x 1/8	1/4
31 to 42	1½ x 1½ x 1/8	1/4
43 to 60	1½ x 1½ x 1/8	2/5
61 to 84	2 x 2 x 1/8	2/5
85 to 96	2 x 2 x 1/5	2/5
97 and over	2 x 2 x 1/4	2/5
  - .4 Upper hanger attachments:
    - .1 For concrete: manufactured concrete inserts.
    - .2 For steel joist: manufactured joist clamp or steel plate washer.
    - .3 For steel beams: manufactured beam clamps.

### **PART 3 - EXECUTION**

- 3.1 General
- .1 Do work in accordance with NFPA (Fire) 90A, NFPA (Fire) 90B, CSA B228.1 and SMACNA.
  - .2 Do not break continuity of insulation vapour barrier with hangers or rods. Insulate strap hangers 100 mm (4") beyond insulated duct.
  - .3 Support risers in accordance with ASHRAE and SMACNA.
  - .4 Install breakaway joints in ductwork on each side of fire separation.
  - .5 Install proprietary manufactured flanged duct joints in accordance with manufacturer's instructions.
  - .6 Manufacture duct in lengths to accommodate installation of acoustic duct lining.
  - .7 Install escutcheon sheet metal angles on both sides of exposed rectangular or round ducts on both sides of non-rated partitions. Seal void with acoustic sealant.
- 3.2 Hangers
- .1 Strap hangers: install in accordance with SMACNA.
  - .2 Angle hangers: complete with locking nuts and washers.
  - .3 Hanger spacing: in accordance with SMACNA as follows:

Duct Size	Spacing
mm (in.)	m (ft.)
to 1500 (60)	3 (10)
1525 (61) and over	2.5 (8)
- 3.3 Sealing
- .1 Apply sealant to outside of joint to manufacturer's recommendations.
- 3.4 Leakage Tests
- .1 In accordance with SMACNA 016.
  - .2 Do leakage tests for supply duct; maximum leakage rate 1% at 1½ times operating static pressure.
  - .3 Make trial leakage tests as instructed to demonstrate workmanship.
  - .4 Install no additional ductwork until trial test has been passed.
  - .5 Test section minimum of 100 ft. long with not less than 3 branch takeoffs and two 90° elbows.
  - .6 Complete test before insulation or concealment.

3.5 Kitchen Exhaust  
Systems

- .1 Provide gasketed access doors in suitable locations for inspections & cleaning.
- .2 Duct branches to suit openings in kitchen hoods as per supplier recommendation.
- .3 All exposed duct connections to hood to be claded with stainless steel.

- END OF SECTION -

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 20 05 01 - Mechanical General Requirements, all mechanical sections, and all other disciplines related to the project.
- 1.2 References .1 Canadian Standards Association (CSA)  
.1 CSA B228.1-1968, Pipes, Ducts and Fittings for Residential Type Air Conditioning.
- 1.3 Product Data .1 Submit product data in accordance with Section 20 05 01 - Mechanical General Requirements.  
.2 Indicate the following:  
.1 Flexible connections.  
.2 Duct access doors.  
.3 Instrument test ports.
- 1.4 Certification of Ratings .1 Catalogue or published ratings shall be those obtained from tests carried out by manufacturer or independent testing agency signifying adherence to codes and standards.

## **PART 2 - PRODUCTS**

- 2.1 General .1 Manufacture in accordance with CSA B228.1.
- 2.2 Flexible Connections .1 Frame: galvanized sheet metal frame 0.6 mm thick with fabric clenched by means of double locked seams.  
.2 Material:  
.1 Fire resistant, self extinguishing, neoprene coated glass fabric, temperature rated at minus 40°C to plus 90°C, density of 1.3 kg/m<sup>2</sup>.
- 2.3 Access Doors in Ducts .1 Non-insulated ducts: sandwich construction of same material as duct, one sheet metal thickness heavier, minimum 0.6 mm thick complete with sheet metal angle frame.  
.2 Insulated ducts: sandwich construction of same material as duct, one sheet metal thickness heavier, minimum 0.6 mm thick complete with sheet metal angle frame and 25 mm thick rigid glass fibre insulation.

- 2.3 Access Doors in Ducts (Cont'd) .3 Gaskets: neoprene.
- 2.3 Access Doors in Ducts (Cont'd) .4 Hardware:
- .1 Up to 300 x 300 mm: 2 sash locks complete with safety chain.
  - .2 301 to 450 mm: 4 sash locks complete with safety chain.
  - .3 451 to 1000 mm: piano hinge and minimum 2 sash locks.
  - .4 Doors over 1000 mm: piano hinge and 2 handles operable from both sides.
  - .5 Hold open devices.
- 2.4 Instrument Test Ports .1 1.6 mm thick steel zinc plated after manufacture.
- .2 Cam lock handles with neoprene expansion plug and handle chain.
  - .3 28 mm minimum inside diameter. Length to suit insulation thickness.
  - .4 Neoprene mounting gasket.
  - .5 Acceptable material: Duro Dyne IP1 or IP2.
- 2.5 Spin-in Collars .1 Conical galvanized sheet metal spin-in collars with lockable butterfly damper.
- .2 Sheet metal thickness to co-responding round duct standards.

### **PART 3 - EXECUTION**

- 3.1 Installation .1 Flexible connections:
- .1 Install in following locations:
    - .1 Inlets and outlets to supply air units and fans.
    - .2 Inlets and outlets of exhaust and return air fans.
    - .3 As indicated.
  - .2 Length of connection: 100 mm.
  - .3 Minimum distance between metal parts when system in operation: 75 mm.
  - .4 Install in accordance with recommendations of SMACNA.
  - .5 When fan is running:
    - .1 Ducting on each side of flexible connection to be in alignment.
    - .2 Ensure slack material in flexible connection.
- .2 Access doors and viewing panels:
- .1 Size:
    - .1 450 x 450 mm for person size entry.
    - .2 450 x 450 mm for servicing entry.
    - .3 300 x 300 mm for viewing.
    - .4 As indicated.
  - .2 Location:
    - .1 At fire and smoke dampers.
    - .2 At control dampers.
    - .3 At devices requiring maintenance.

- 3.1 Installation (Cont'd)
- .2 (Cont'd)
- .2 (Cont'd)
- .4 At locations required by code.
- .5 At reheat coils.
- .6 Elsewhere as indicated.
- .3 Instrument test ports.
- .1 General:
- .1 Install in accordance with recommendations of SMACNA and in accordance with manufacturer's instructions.
- .2 Locate to permit easy manipulation of instruments.
- .3 Install insulation port extensions as required.
- .4 Locations.
- .1 For traverse readings:
- .1 At ducted inlets to roof and wall exhausters.
- .2 At inlets and outlets of other fan systems.
- .3 At main and sub-main ducts.
- .4 And as indicated.
- .2 For temperature readings:
- .1 At outside air intakes.
- .2 In mixed air applications in locations as approved by Engineer.
- .3 At inlet and outlet of coils.
- .4 Downstream of junctions of two converging air streams of different temperatures.
- .5 And as indicated.

- END OF SECTION -

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 20 05 01 - Mechanical General Requirements, all mechanical sections, and all other disciplines related to the project.
- 1.2 References .1 Sheet Metal and Air Conditioning Contractors' National Association (SMACA).
- 1.3 Product Data .1 Submit product data in accordance with Section 20 05 01 - Mechanical General Requirements.

## **PART 2 - PRODUCTS**

- 2.1 General .1 Manufacture to SMACNA standards.
- 2.2 Single Blade Dampers .1 Of same material as duct, but one sheet metal thickness heavier. V-groove stiffened.
- .2 Size and configuration to recommendations of SMACNA, except maximum height 100 mm (4").
- .3 For rectangular ducts adjustable lever with shaft extension to accommodate insulation thickness.
- .4 For round branch ducts adjustable lever with shaft extension to accommodate insulation thickness.
- .5 Inside and outside nylon end bearings.
- .6 Channel frame of same material as adjacent duct, complete with angle stop.

## **PART 3 - EXECUTION**

- 3.1 Installation .1 Install where indicated.
- .2 Install in accordance with recommendations of SMACNA and in accordance with manufacturer's instructions.
- .3 For supply, return and exhaust systems, locate balancing dampers in each branch duct.

- 3.1 Installation  
(Cont'd)
- .4 Runouts to registers and diffusers: install single blade damper located as close as possible to main ducts.
  - .5 All dampers to be vibration free.
  - .6 Ensure damper operators are observable and accessible.

- END OF SECTION -

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 20 05 01 - Mechanical General Requirements, all mechanical sections, and all other disciplines related to the project.
- 1.2 References .1 National Fire Protection Association (NFPA)  
.1 NFPA (Fire) 90A, Installation of Air Conditioning and Ventilating Systems, 2015 Edition.  
.2 Underwriters Laboratories of Canada (ULC)  
.1 CAN/ULC S112-10, Fire Test of Fire Damper Assemblies.
- 1.3 Product Data .1 Submit product data in accordance with Section 20 05 01 - Mechanical General Requirements.  
.2 Indicate the following:  
.1 Fire dampers.  
.2 Fusible links.
- 1.4 Maintenance Materials .1 Provide maintenance materials in accordance with Section 20 05 01 - Mechanical General Requirements.
- 1.5 Certification of Ratings .1 Catalogue or published ratings shall be those obtained from tests carried out by manufacturer or those ordered by him from independent testing agency signifying adherence to codes and standards.

## **PART 2 - PRODUCTS**

- 2.1 Fire Dampers .1 Fire dampers: arrangement Type B or C, listed and bear label of ULC, meet requirements of NFPA (Fire) 90A authorities having jurisdiction. Fire damper assemblies to be fire tested in accordance with CAN/ULC S112.  
.2 Mild steel, factory fabricated for fire rating requirement to maintain integrity of fire wall and/or fire separation.  
.3 Top hinged: offset single damper, round or square; interlocking type; sized to maintain full duct cross section as indicated.  
.4 Fusible link actuated having negator-spring- closing operator. Dynamic type.

- 2.1 Fire Dampers (Cont'd)
- .5 40 x 40 x 3 mm retaining angle iron frame, on full perimeter of fire damper, on both sides of fire separation being pierced.
  - .6 Rating: 1½ hr.
  - .7 Acceptable material: AMI, NCA, Nailor, Ruskin, Ventex/Alumavent, Greenheck, E.H. Price.

### **PART 3 - EXECUTION**

- 3.1 Installation
- .1 Install in accordance with NFPA (Fire) 90A and in accordance with conditions of ULC listing.
  - .2 Maintain integrity of fire separation.
  - .3 After completion and prior to concealment obtain approvals of complete installation from authority having jurisdiction.
  - .4 Install access door adjacent to each damper. See Section 23 33 00 - Duct Accessories.
  - .5 Coordinate with installer of firestopping.
  - .6 Ensure access door/panels, fusible links, and/or damper operators are easily observed and accessible.

- END OF SECTION -

.1 UL 181, Factory Made Air Ducts and Connectors.  
.4 Underwriters' Laboratories of Canada (ULC)  
.1 CAN/ULC S110-13, Fire Tests for Air Ducts.
- 1.3 Product Data .1 Submit product data in accordance with Section 20 05 01 - Mechanical General Requirements.  
.2 Indicate the following:  
.1 Thermal properties.  
.2 Friction loss.  
.3 Acoustical loss.  
.4 Leakage.  
.5 Fire rating.
- 1.4 Certification of Ratings .1 Catalogue or published ratings shall be those obtained from tests carried out by manufacturer or independent testing agency signifying adherence to codes and standards.

## **PART 2 - PRODUCTS**

- 2.1 General .1 Factory fabricated to CAN/ULC S110.  
.2 Pressure drop coefficients listed below are based on relative sheet metal duct pressure drop coefficient of 1.00.  
.3 Flame spread rating not to exceed 25. Smoke developed rating not to exceed 50.

- 2.2 Metallic - Uninsulated .1 Type 2: spiral wound flexible aluminum with triple lock mechanical joints.
- .2 Performance:
- .1 Factory tested to 2.5 kPa without leakage.
- .2 Maximum relative pressure drop coefficient: 3.
- .3 Acceptable material: Flexmaster Type T/L.

### **PART 3 - EXECUTION**

- 3.1 Duct Installation .1 Install in accordance with: CAN/ULC S110, UL 181 Amendment 1, NFPA (Fire) 90A, NFPA (Fire) 90B & SMACNA.
- .2 Maximum length of flexible duct: 1500 mm (5 feet).
- 3.2 Application .1 Branch ductwork to diffuser where concealed.

.4 Underwriters' Laboratories of Canada  
.1 CAN/ULC S102-10, Surface Burning Characteristics of Building Materials and Assemblies.
- 1.3 Product Data .1 Submit product data in accordance with Section 20 05 01 - Mechanical General Requirements.

## **PART 2 - PRODUCTS**

- 2.1 Duct Liner .1 General:  
.1 Fibrous glass or "textile" fibrous glass duct liner: air stream side faced with mat facing.  
.2 Flame spread rating shall not exceed 25. Smoke development rating shall not exceed 50 when tested in accordance with CAN/ULC-S102.
- .2 Rigid:  
.1 Use on flat surfaces where indicated.  
.2 25 mm (1") thick, to CAN/CGSB-51.10, fibrous glass rigid board duct liner.  
.3 Density: 36 kg/m<sup>3</sup> minimum.  
.4 Thermal resistance to be minimum 0.76 m<sup>2</sup>.°C/W for 25 mm thickness when tested in accordance with ASTM C177, at 24°C mean temperature.

- 2.2 Fasteners .1 Weld pins 2.0 mm diameter, length to suit thickness of insulation. Metal retaining clips, 32 mm square.
- 2.3 Joint Tape .1 Poly-Vinyl treated open weave fibreglass membrane 50 mm wide.
- 2.4 Sealer .1 Meet requirements of NFPA (Fire) 90A and NFPA (Fire) 90B.
- .2 Flame spread rating shall not exceed 25. Smoke development rating shall not exceed 50. Temperature range minus 68°C to plus 93°C.

### **PART 3 - EXECUTION**

- 3.1 General .1 Do work in accordance with recommendations of SMACNA duct liner standards as indicated in SMACNA HVAC Duct Construction Standards, Metal and Flexible, except as specified otherwise.
- .2 Line inside of ducts where indicated.
- .3 Duct dimensions, as indicated, are clear inside duct lining.
- 3.2 Duct Liner .1 Install in accordance with manufacturer's recommendations, and as follows:
- .1 Fasten to interior sheet metal surface with 100% coverage of adhesive.
- .2 In addition to adhesive, install weld pins not less than 2 rows per surface and not more than 425 mm on centres.
- 3.3 Joints .1 Protect leading and trailing edges of each duct section with sheet metal nosing having 25 mm overlap and fastened to duct.

- END OF SECTION -

**PART 1 - GENERAL**

- 1.3 Shop Drawings and Product Data .1 Submit shop drawings and product data in accordance with Section 20 05 01 - Mechanical General Requirements.  
.2 Provide:  
.1 Fan performance curves showing point of operation, kW (BHP) and efficiency.  
.2 Sound rating data at point of operation.
- 1.4 Operation and Maintenance Data .1 Provide operation and maintenance data for incorporation into manual specified in Section 20 05 01 - Mechanical General Requirements.  
.2 Furnish list of individual manufacturer's recommended spare parts for equipment such as bearings and seals, and addresses of suppliers, together with list of specialized tools necessary for adjusting, repairing or replacing, for placement into operating manual.
- 1.5 Maintenance Materials .1 Provide maintenance materials in accordance with Section 20 05 01 - Mechanical General Requirements.
- 1.6 Certification of Ratings .1 Catalogued or published ratings shall be those obtained from tests carried out by manufacturer or those ordered from independent testing agency signifying adherence to codes and standards in force.

1.6 Certification of Ratings  
(Cont'd)

---

## **PART 2 - PRODUCTS**

- 2.1 Fans General
- .1 Capacity: flow rate, total static pressure, bhp, efficiency, revolutions per minute, power, model, size, sound power data and as indicated on schedule.
  - .2 Statically and dynamically balanced. Constructed in conformity with AMCA 99.
  - .3 Sound ratings: comply with AMCA 301, tested to AMCA 300. Unit shall bear AMCA certified sound rating seal.
  - .4 Performance ratings: based on tests performed in accordance with AMCA 210, and ASHRAE 51, unit to bear AMCA certified rating seal.
  - .5 Performance ratings: based on tests performed in accordance with AMCA 210, and ASHRAE 51. Unit shall bear AMCA certified rating seal, except for propeller fans smaller than 300 mm diameter.
  - .6 Bearings: sealed lifetime oilite ball bearings heavy duty grease lubricated ball or roller bearings of self aligning type with oil retaining, dust excluding seals and a certified minimum rated life of 200,000 h in accordance with ABMA L50 life standard. Bearings to be rated and selected in accordance with ABMA 9 and ABMA 11.
  - .7 Motors:
    - .1 In accordance with Section 23 05 13 - Motors, Drives and Guards as specified supplemented herein.
    - .2 For use with variable speed controllers where applicable.
    - .3 Sizes as indicated.
    - .4 Two speed with two windings and speeds where applicable.
    - .5 Two speed with split winding, where applicable.
  - .8 Accessories and hardware: matched sets of V-belt drives, adjustable slide rail motor bases, belt guards, coupling guards fan inlet and/or outlet safety screens as indicated and as specified in Section 23 05 13 - Motors, Drives and Guards.
  - .9 Factory primed before assembly in colour standard to manufacturer.
  - .10 Scroll casing drains: as indicated.
  - .11 Bearing lubrication systems plus extension lubrication tubes where bearings are not easily accessible.
  - .12 Vibration isolation: as per manufacturer's recommendations.
  - .13 Flexible connections: to Section 23 33 00 - Duct Accessories.

- 2.2 Roof Exhauster .1 Spun aluminum, downblast exhaust fans shall be direct type as per equipment schedule. The fan wheel shall be centrifugal backward inclined, constructed of aluminum and shall include a wheel cone carefully matched to the inlet cone for precise running tolerances. Vibration isolated. Wheels shall be statically and dynamically balanced. The fan housing shall be constructed of heavy gauge aluminum with a rigid internal support structure and a birdscreen.
- .2 Motors shall be heavy duty ECM type c/w speed controller, carefully matched to the fan load, and furnished at the specified voltage, phase and enclosure. Drive frame assembly shall be constructed of heavy gauge steel. Motors and drives shall be mounted on vibration isolators, out of the airstream. Fresh air for motor cooling shall be drawn into the motor compartment through a large space between the fan shroud and the motor cover. Motors and drives shall be readily accessible for maintenance.
- .3 Precision ground and polished fan shafts shall be mounted in permanently sealed, lubricated pillow block ball bearings. Drives shall be sized for a minimum of 150% of driven horsepower. Pulleys shall be of the cast type, keyed and securely attached to the wheel and motor shafts.
- .4 Motor pulleys shall be adjustable for final system balancing. A conduit chase shall be provided through the base to the motor compartment for ease of electrical wiring.
- .5 All fans shall come with prefabricated insulated roof curb and backdraft damper.
- .6 All fans shall bear the AMCA Certified Ratings Seal for sound and air performance.
- .7 Each fan shall bear a permanently affixed manufacturer's engraved metal nameplate containing the model number and individual serial number for future identification.
- .8 Performance: as indicated on drawing schedule.
- .9 Acceptable material: Greenheck, PennBarry, Loren Cook or equal.

### **PART 3 - EXECUTION**

- 3.1 Installation .1 Install in accordance with manufacturer's instructions.
- 3.2 Anchor Bolts and Templates .1 Size anchor bolts to withstand seismic acceleration and velocity forces as specified in Section 23 05 49.01 - Seismic Restraint System.

- END OF SECTION -

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 20 05 01 - Mechanical General Requirements, all mechanical sections, and all other disciplines related to the project.
- 1.2 References .1 Air Movement and Control Association (AMCA)

.2 AMCA 210-07, Laboratory Methods of Testing Fans for Rating.  
.3 AMCA 300-14, Reverberant Room Method for Sound Testing of Fans.  
.4 AMCA 301-14, Methods for Calculating Fan Sound Ratings from Laboratory Test Data.  
.5 AMCA 302-73 (R2012), Application of Sone Ratings for Non-Ducted Air Moving Devices.  
.6 AMCA 303-79 (R2012), Application of Sound Power Level Ratings for Fans.  
.2 ASHRAE/Air Movement and Control Association  
.1 ASHRAE/AMCA 51-2007, Laboratory Methods of Testing Fans for Rating.
- 1.3 Shop Drawings and Product Data .1 Submit shop drawings and product data in accordance with Section 20 05 01 - Mechanical General Requirements.
- 1.4 Closeout Submittals .1 Provide maintenance data for incorporation into manual specified in Section 20 05 01 - Mechanical General Requirements.
- 1.5 Certification of Ratings .1 Catalogued or published ratings shall be those obtained from tests carried out by manufacturer or those ordered by him from independent testing agency signifying adherence to codes and standards.

## **PART 2 - PRODUCTS**

- 2.1 Fans General .1 Standard of rating:  
.1 AMCA 201 for fan application.  
.2 AMCA 302 for application of sone loudness ratings for non-ducted air moving devices.  
.3 AMCA 303 for application of sound power ratings for ducted air moving devices.  
.4 Performance: to AMCA 210 and ASHRAE 51. Unit to bear AMCA certified seal.  
.2 Pwl sound ratings to comply with AMCA 303, tested to AMCA 300 Unit to bear AMCA certified sound rating seal.

- |  |    |   |
|--|----|---|
| <u>2.1 Fans General<br/>(Cont'd)</u>   | .3 | Maximum loudness: 3.5 sones.  |
| <u>2.2 In-Line Cabinet<br/>Exhaust</u> | .1 | Fan housing construction of corrosion resistant galvanized steel c/w sound absorbing lined insulation.  |
|  | .2 | Removable bottom housing panel allows easy access to the power assembly for inspection or service.  |
|  | .3 | Outlet duct connection with integral backdraft damper can be converted from horizontal to vertical discharge.   |
|  | .4 | Fan scroll is constructed of galvanized steel.  |
|  | .5 | Fan wheels are double width forward curved centrifugal type. All wheels are dynamically balanced for vibration free operation.  |
|  | .6 | Motors 115/60/1. All motors are sized to match fan loads, have thermal overload protection and are mounted on vibration isolators. Power assemblies can be easily unplugged and removed for inspection or service. ECM motor with controller. |
|  | .7 | Angle mounting brackets can be adjusted to any typical ceiling material thickness.  |
|  | .8 | Acceptable material: Greenheck, PennBarry, Loren Cook, Twin City.   |

**PART 3 - EXECUTION**

- |   |    |  |
|---|----|--|
| <u>3.1 Installation</u>                   | .1 | Install in accordance with manufacturer's recommendations.                   |
| <u>3.2 Anchor Bolts and<br/>Templates</u> | .1 | Supply for installation by other Divisions.                                  |
|   | .2 | Size anchor bolts to withstand seismic 4 acceleration and 2 velocity forces. |

- END OF SECTION -

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 20 05 01 - Mechanical General Requirements, all mechanical sections, and all other disciplines related to the project.
- 1.2 Product Data .1 Submit product data in accordance with Section 20 05 01 - Mechanical General Requirements.
- .2 Indicate the following:
- .1 Capacity.
  - .2 Throw and terminal velocity.
  - .3 Noise criteria.
  - .4 Pressure drop.
  - .5 Neck velocity.
- 1.3 Maintenance Materials .1 Provide maintenance materials in accordance with Section 20 05 01 - Mechanical General Requirements.
- .2 Include:
- .1 Keys for volume control adjustment.
  - .2 Keys for air flow pattern adjustment.
- 1.4 Manufactured Items .1 Grilles, registers and diffusers of same generic type to be product of one manufacturer.
- 1.5 Certification of Ratings .1 Catalogued or published ratings shall be those obtained from tests carried out by manufacturer or those ordered by him from independent testing agency signifying adherence to codes and standards.

## **PART 2 - PRODUCTS**

- 2.1 General .1 To meet capacity, pressure drop, terminal velocity, throw, noise level, neck velocity as indicated.
- .2 Frames:
- .1 Full perimeter gaskets.
  - .2 Plaster frames where set into plaster or gypsum board and as specified.
  - .3 Concealed fasteners.
- .3 Concealed operators.

- 2.1 General (Cont'd) .4 Acceptable material: E.H Price Ltd., Nailor, Titus, Krueger, Metal-aire.
- 2.2 Return and Exhaust Grilles and Register .1 Type TG1: aluminum, 13 mm x 13 mm egg crate type face bars, baked white enamel finish, ducted where indicated, drywall mounted. Size 600 mm x 150 mm unless otherwise indicated. Equivalent to E.H. Price Model 80.
- .2 Type EG1: steel construction, 35° deflection, fixed louvres, 20 mm (¾") spacing, off-white baked enamel finish. Size as indicated. Drywall mounted. Equivalent to E.H. Price Model 535.

### **PART 3 - EXECUTION**

- 3.1 Installation .1 Install in accordance with manufacturers instructions.
- .2 Install with flat head cadmium plated screws in countersunk holes where fastenings are visible.

- END OF SECTION -

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 20 05 01 - Mechanical General Requirements, all mechanical sections, and all other disciplines related to the project.
- 1.2 Shop Drawings .1 Submit shop drawings in accordance with Section 20 05 01 - Mechanical General Requirements.
- .2 Manufacturer of Radiant Panel shall submit AutoCAD drawings and full scale plans showing panel layout dimensions, connection points, performance data and assembly details.
- .3 Indicate:
- .1 Equipment, capacity, piping, and connections.
  - .2 Dimensions, internal and external construction details, recommended method of installation with proposed structural steel support, sizes and location of mounting bolt holes.
  - .3 Special enclosures.
- .4 Shop drawings will not be reviewed unless all the above submissions are provided. Any costs associated with the failure to provide the above noted submittals shall be borne solely by the contractor.
- 1.3 Samples .1 Submit samples in accordance with Section 20 05 01 - Mechanical General Requirements.
- .2 Submit 600 mm length sample panel showing method of securing to structure and connecting to adjacent length of enclosure.
- 1.4 Warranty .1 Manufacturer to provide a 10 year radiant panel replacement warranty including parts and labour for panel finish against discolouring and paint separation when operating with 85°C heating water.

## **PART 2 - PRODUCTS**

- 2.1 Capacity .1 As indicated, based on 82.2°C (180°F) entering water temperature, 11°C (20°F) temperature drop and 21°C (70°F) room temperature.
- .2 Maximum pressure drop per zone: 12.9 kPa (4 ft.)

- 2.2 Linear Radiant Panels (RP)
- .1 Contractor shall refer to mechanical drawings to determine location, quantity and sizing of radiant panels.
  - .2 Panels shall be sized according to the required heat output as indicated on drawings.
  - .3 The radiant ceiling extrusions shall consist of extruded aluminum with copper tubing of 12.8 mm I.D. mechanically attached to the aluminum face plate. The copper tube shall be held in place by an aluminum saddle which extends more than half way around the diameter of the tube. A non-hardening heat conductive paste shall be placed between the copper tubing and the aluminum face plate. Panels shall weigh no more than 10.5 kg/m<sup>2</sup> when operating. The use of adhesive and/or clips to attach the copper tube to the extrusion will not be acceptable. Panels shall be fitted with drywall frame and access sections as noted; confirm dimension from site prior to fabrication. All curved sections shall be shop mitred. All panels shall be independently supported from structure.
  - .4 Factory assembled panels only.
  - .5 Provide boarder frame or vertical extrusion as indicated.
  - .6 Panels shall be finished in a powder coat to the manufacturer's standard white colour.
  - .7 Reference drawing for performance.
  - .8 Acceptable materials: TWA panels, Airtex (Engineered Air), Rittling, Sigma panels.

### **PART 3 - EXECUTION**

- 3.1 Installation
- .1 Install in accordance with manufacturer's instructions.
  - .2 Install in accordance with piping layout and reviewed shop drawings.
  - .3 Provide for pipe movement during normal operation.
  - .4 Maintain sufficient clearance to permit performance of service maintenance.
  - .5 Check final location with Engineer if different from that indicated prior to installation. Should deviations beyond allowable clearances arise, request and follow Engineer's directive.
  - .6 All panels to be covered by 50 mm (2") thick fibreglass insulation c/w foil back after connection and testing of panels is complete.

- END OF SECTION -

- 1.1 General .1 Inspection authorities shall mean Electrical Safety Authority.
- .2 Supply authority shall mean Hydro Ottawa.
- .3 Provide shall mean supply, install, test and commission.
- .4 Refer to General Instructions, Contract Requirements, Amendments and Divisions 00 & 01 and be governed by same.
- 1.2 Codes and Standards .1 Provide complete installation in accordance with the latest edition of the Ontario Electrical Safety Code and Electrical Bulletins.
- .2 Provide overhead and underground systems in accordance with CAN/CSA C22.3 No. 1 except where specified otherwise.
- .3 Comply with the following additional codes as a minimum:
- .1 CSA Standards.
  - .2 ULC Standards.
  - .3 Ontario Building Code - Latest Edition.
  - .4 Fire Code.
  - .5 Elevator Code.
  - .6 NFPA.
- 1.3 Care, Operation and equipment. Start-up .1 Instruct operating personnel in the operation, care and maintenance of
- .2 Arrange and pay for services of manufacturer's factory service engineer to supervise start-up of installation, check, adjust, balance and calibrate components.
- .3 Provide these services for such period, and for as many visits as necessary to put equipment in operation, and ensure that operating personnel are conversant with all aspects of its care and operation.
- 1.4 Time of Completion .1 Commence work upon notification of acceptance of offer, or as outlined in the approved construction schedule.
- .2 Verify equipment delivery times immediately and notify engineer within two (2) weeks of contract award of any deliveries which would affect schedule.
- 1.5 Shop Drawings .1 Submit single electronic format (pdf) of shop drawings and product data along with transmittal. Hard copy shop drawings shall not be accepted.

- 1.5 Shop Drawings (Cont'd)
- .2 The review is for the sole purpose of ascertaining conformance with the general design concept, and does not mean approval of the design details inherent in the shop drawings, responsibility for which shall remain with the Contractor. Such review shall not relieve the Contractor of responsibility for errors or omissions in the shop drawings or of his responsibility for meeting all requirements of the Contract Documents.
  - .3 Do not commence manufacture or order materials before shop drawings are reviewed.
  - .4 Shop drawings shall clearly indicate:
    - .1 Name of Contractor.
    - .2 Name of component.
    - .3 Name of service or system.
    - .4 Contractors signed review stamp.
  - .5 Shop drawings shall include, but is not limited to, the following information:
    - .1 Arrangement of specific system.
    - .2 Electrical characteristics, volts, phase, amps, etc.
    - .3 Dimensions of equipment and required clearances.
    - .4 Performance data.
    - .5 Finish.
    - .6 Gauge of materials.
    - .7 Wiring diagrams (where applicable).
    - .8 Product data (where applicable).
  - .6 Review relevant shop drawings of other Divisions to ensure interface of systems with respect to wiring, voltages, ampacities, phases, size, controls, etc. Notify Engineer of any discrepancies immediately.
  - .7 Provide shop drawings for the equipment listed below and/or as indicated in this specification:
    - .1 Distribution equipment.
    - .2 Light fixtures.
    - .3 Emergency lighting.
    - .4 Motor control equipment.
    - .5 Emergency - power generation.
    - .6 Fire alarm.
- 1.6 Fire & Safety at Requirements
- .1 Comply with National Building Code (Part 8, Health and Safety Measures Construction and Demolition Sites) and Provincial Regulations for Construction Projects.
- 1.7 Existing Services
- .1 Existing services required for work may be used by the Contractor with the Owners written consent. Ensure capacity is adequate prior to imposing additional loads. Connect and disconnect at own expense and responsibility.
  - .2 Notify the Owner a minimum of 72 hours in advance of intended interruption of services; obtain requisite permissions.

- 1.7 Existing Services (Cont'd)
- .3 Keep duration of these interruptions to a minimum. Carry out all interruptions after normal working hours of the occupants, preferably on weekends or as approved by the Owner in writing.
  - .4 Any unscheduled disruption to services to be immediately reinstated.
  - .5 Existing fire alarm and security systems are to remain fully functional, throughout, provide conduit and wire as required to maintain services during construction.
- 1.8 Demolition
- .1 Unless otherwise specified, materials for removal become the Contractor's property and shall be taken from site, and disposed of in accordance with all applicable codes, standards and regulations.
  - .2 Existing lighting ballasts may contain P.C.B.'s. Contact the local Ministry of Environment (M.O.E.) office for confirmation of ballasts containing P.C.B. material. Submit written confirmation from M.O.E. verifying the presence or non-presence of P.C.B.'s. If P.C.B.'s are found to be present, provide removal of ballasts from light fixtures and place in approved 45 gallon drums for storage on site. Handle P.C.B. contaminated equipment in accordance with codes, standards and guidelines.
  - .3 Disconnect and make safe all systems to be demolished by other Divisions. Refer to other Divisions for extent.
  - .4 Maintain existing remaining circuits, systems, etc., which pass through construction/demolition areas. Provide additional wire and conduit as required to maintain systems. Additional wire and conduit to be concealed when construction is complete.
  - .5 Reinstall immediately, any existing remaining systems, inadvertently interrupted during construction or demolition.
  - .6 Remove all redundant wiring and conduit in ceiling spaces, (power, communications, systems, etc.).
- 1.9 Protection
- .1 Protect access areas through existing building (lobby, elevator, corridor stairwell, etc.) from damage. Clean area daily or more frequently if directed by Engineer.
  - .2 Protect exterior areas (roof, walls, etc.) against damage during handling of new and removed materials.
  - .3 Repair and make good all damaged equipment, etc. to satisfaction of the Engineer.
  - .4 Protect stored materials, work in process and finished work against damage until take-over.
  - .5 Protect adjacent areas against spread of dust and dirt beyond work areas.
  - .6 Protect operatives and other users of site from all hazards.

- 1.10 Anchoring Methods .1 Electrical equipment, fixtures, cable tray, conduit and cabling is to be securely anchored or fastened to the building structure using drilled hole wedge anchors for concrete structures or steel clamps for steel structures.
- .2 Air, fuel or powder actuated devices or any other equivalent type of fastening devices are not to be used.
- .3 Where anchoring method forms part of seismic restraint requirements, anchoring methods to comply with Section 26 05 05 - Seismic Restraint Systems (SRS).
- 1.11 Use of Site and of Facilities .1 Execute work with least possible interference or disturbance to normal use premises. Make arrangements with Building Owner to facilitate work as stated.
- .2 Particular attention shall be given to minimizing dust, noise and other forms of contamination from occupied areas.
- .3 Maintain existing services to building and provide for personnel and vehicle access.
- .4 Where security is reduced by work, provide temporary means to maintain security.
- 1.12 Cutting, Patching & work. Making Good .1 Provide cutting & patching of existing surfaces as required to accommodate new
- .2 Remove all items so shown or specified.
- .3 Patch and make good surfaces cut, damaged or disturbed, to Engineer's approval. Match existing material, colour, finish and texture or as indicated otherwise.
- .4 Provide dust tight screens or partitions to localize dust generating activities and for protection of finished areas of work, workers and public.
- .5 Scan slabs before coring or drilling deeper than 1" (25 mm). Provide all required notification, clearance & protection for scanning process. Adjust coring & drilling locations as necessary to avoid rebar & conduits.
- 1.13 Examination .1 Examine site and conditions which will affect the work. Submission of tender shall be deemed as confirmation that tenderer has inspected site and is conversant with conditions, and shall not constitute additional costs as a result of site conditions.
- .2 Verify existing conditions including but not limited to, structural elements, sprinkler piping and heads, roof drains and storm sewer piping, electrical conduit and wiring, process utility piping, ductwork and other building services.
- .3 The fact that not all existing conditions discussed in Item .2 above are shown on the drawings does not relieve the responsibility of coordinating the work with the existing construction.

- 1.14 Co-ordination .1 Co-ordinate the work with all other Divisions, especially Divisions 21, 22 & 23, to ensure systems compatibility, and to ensure schedules and requirements are maintained.
- .2 Where perceived interferences occur, prepare detailed sketches indicating proposed solution for review and acceptance by Engineer.
- 1.15 Operating and Maintenance Instructions Manual .1 Submit electronic format (pdf) copy of draft Operation and Maintenance Manual to Engineer for approval, compiled as follows:
- .1 Enclose title sheet labelled "Operating and Maintenance Instructions", project name, date and list of contents. Project name must appear on binder face and spine.
- .2 Organize contents into applicable sections of work to parallel project specifications breakdown. Mark each section by labelled tabs protected with celluloid covers fastened to hard paper dividing sheets.
- .2 Include following information plus data specified.
- .1 Installation and maintenance instructions for equipment and materials.
- .2 Description: Operation of the equipment and systems defining start-up, shut-down and emergency procedures, and any fixed or adjustable set points that affects the equipment operation. Include nameplate information such as make, size, capacity and serial number.
- .3 Maintenance: Use clear drawings, diagrams or manufacturers' literature which specifically apply and detail the following:
- .1 Lubrication products and schedules.
- .2 Trouble-shooting procedures.
- .3 Adjustment techniques.
- .4 Operational checks. Suppliers names, addresses and telephone numbers and components supplied by them must be included in this section. Components must be identified by a description and manufacturer's part
- .3 Spare Parts: List all recommended spares to be maintained on site to ensure optimum efficiency. List all special tools appropriate unique application. All parts/tools detailed must be identified as to manufacturer, manufacturer part number and supplier (including address).
- .4 Include shop drawings, operation and maintenance instructions (bound as one) in accordance with the above for all equipment specified.
- .5 Include one complete set of final shop drawings (bound separately) indicating corrections and changes made during fabrication and installation.
- .6 Within four (4) weeks of acceptance of draft manuals, submit four (4) copies.
- .7 Failure to submit manuals as specified, will incur additional 10% holdback against progress payments.
- .8 Include appropriate wiring diagrams, schematics, elevations, mounting requirements, options included, etc. as it pertains to each system and/or device.

- 1.15 Operating and Maintenance Instructions Manual (Cont'd) .9 Information in manuals is to be specific to this project. Generic information is unacceptable.
- 1.16 As-built Drawings .1 Site records:  
.1 Electrical sub-contractor shall mark all changes as work progresses and as changes occur.  
.2 On a weekly basis, transfer information to record set of documents, revising to show all work as actually installed.  
.3 Use different colour waterproof ink for each service.  
.4 Make available for reference purposes and inspection at all times.  
.2 As-built drawings:  
.1 Identify each drawing in lower right hand corner in letters at least 12 mm high as follows: - "AS BUILT DRAWINGS: THIS DRAWING HAS BEEN REVISED TO SHOW ELECTRICAL SYSTEMS AS INSTALLED" (Signature of Contractor) (date).  
.2 Submit hard copy to Engineer for approval and make corrections as directed.  
.3 Following approval, submit completed hard copy as-built drawings with Operating and Maintenance Manuals.
- 1.17 Guarantees and Warranties .1 Before completion of work, collect all manufacturer's guarantees and warranties submit to the Engineer.  
.2 Identify, bind and index material in maintenance manuals.  
.3 Division 26's Contractor to submit a written, signed guarantee stating that all systems and components have been installed to manufacturers recommendations and that systems are operating satisfactorily and meet the design requirements, and all material and labour deficiencies will be corrected, at no cost, for a period of one year after substantial completion.
- 1.18 Final Inspection .1 Do not request final inspection until:  
.1 Deficiencies are less than 25 items.  
.2 All systems have been tested and are ready for operation.  
.3 All balancing of loads has been completed.  
.4 The Owner's operating personnel have been instructed in the operation of all systems and equipment.  
.5 The complete operation and maintenance data books have been delivered to the Engineer.  
.6 All inspection certificates have been furnished.  
.7 All record drawings have been completed and approved.  
.8 All spare parts and replacement parts have been provided and receipt of same acknowledged.  
.9 The cleaning up is finished in all respects.  
.10 Fire alarm verification certificates submitted.

- 1.18 Final Inspection (Cont'd) .2 Final inspection shall be subjected to the approval of the Engineer.
- 1.19 Clean Up .1 Clean up work area as work progresses.
- .2 At the end of each work period, and more often if ordered by the Engineer, remove debris from site.
- .3 Clean areas under contract to a condition at least equal to that previously existing and to approval of Engineer.
- .4 Provide cleaning of light fixture reflectors, lamps and lenses, vacuum panelboards, cabinets switchgear, etc., upon completion of contract, to Engineers satisfaction.
- 1.20 Approval of Alternative Material .1 During the tendering period, alternative materials to those specified may considered if full descriptive data are submitted five (5) days prior to tender closing to:
- GOODKEY, WEEDMARK & ASSOCIATES LIMITED  
1688 Woodward Drive  
Ottawa, Ontario  
K2C 3R8
- .2 Approval of alternatives will be signified by issue of an Addendum to the Contract Documents.
- .3 Include cost of any and all additional work and modifications to the engineering design, and costs incurred by other Divisions as a result of using materials.
- 1.21 Contract Documents .1 Drawings and specifications are complementary, items shown or mentioned in one and not in the other are deemed to be included in the contract work.
- .2 The contract documents are intended to describe complete fully functional systems although not all components are indicated. Division 26 shall provide all required conduits, wiring, equipment, etc. to provide fully functional systems which meet the design intent.
- .3 Discrepancies in the design documents, or doubt as to the full intent of the design shall be brought to the Engineer's attention prior to tender close. Failure to do this means that the Contractor is fully aware and shall be responsible of design intent and requirements and shall provide fully functional and coordinated systems.
- 1.22 Project Schedule .1 On award of contract and upon Engineer's request, submit bar chart construction schedule for work, indicating anticipated progress stages within time of completion.
- .2 All building operations must be maintained during all phases of construction.

- 1.22 Project Schedule (Cont'd) .3 All plant shutdowns causing interruption of services to the building occupants will be scheduled for unoccupied hours (nights or weekends) as approved by the Owner and Engineer. Provide minimum of 72 hours notice.
- .4 When schedule has been reviewed by the Owner and Engineer, take necessary measures to complete work within scheduled time. Any change of schedule must be authorized by Owner and the Engineer.
- 1.23 Cost Breakdown .1 Within one (1) week of award of contract, submit breakdown of costs as separate amounts of labour, materials, etc. of each system. Break down electrical systems generally as follows:
- .1 Start-up.
  - .2 Permits and inspections.
  - .3 Site work.
  - .4 Distribution.
  - .5 Coordination study.
  - .6 Branch circuit roughing.
  - .7 Wiring devices.
  - .8 Lighting:
    - .1 Exterior.
    - .2 Interior.
    - .3 Exit Lights.
  - .9 Fire alarm.
  - .10 C.A.T.V.
  - .11 Telephone.
  - .12 PA/intercom.
  - .13 Security.
  - .14 Generator & associated equipment.
  - .15 Clocks.
  - .16 Motor control.
  - .17 Data system.
  - .18 Testing, commissioning and job cleanup. (Generally 1.5 to 3% of total cost). Indicate material & labour costs separately for each item.
- .2 After acceptance by Engineer, cost breakdown will be used as the basis of progress payments.
- 1.24 Permits, Fees and of Inspection .1 Submit to Electrical Inspection Department and Supply Authority necessary number drawings and specifications for examination and approval prior to commencement of work.
- .2 Pay associated fees.
- .3 Notify Engineer of changes required by Electrical Inspection Department prior to making changes.
- .4 Furnish Certificates of Acceptance from Electrical Inspection Department and authorities having jurisdiction on completion of work to Engineer and include in manuals. Final payment will not be made until certificates have been submitted.

- 1.25 Materials and to Equipment
- .1 Equipment and material to be new CSA certified. Where there is no alternative supplying equipment which is not CSA certified, obtain special approval from Electrical Inspection Department.
  - .2 Factory assemble control panels and component assemblies.
- 1.26 Trade Qualifications
- .1 The work shall be carried out by licensed electricians with minimum five years experience who hold Ontario Certificates of Qualifications, and current contractors license.
  - .2 Installation methods and materials to be of strictest quality, and conform to Canadian General Standards Board, Canadian Standards Association, Ontario Building Code and all Local and Provincial Codes and Standards. Discrepancy in Codes to mean strictest rule applies.
  - .3 The ratio of Journeymen to Apprentices shall not exceed the ratio in the Trade Qualifications and Apprenticeship Act of Ontario.
- 1.27 Finishes
- .1 Shop finish metal enclosure surfaces by application of rust resistant primer inside and outside, and at least two coats of finish enamel.
    - .1 Paint outdoor electrical equipment "equipment green" finish to EEMAC Y1-1.
    - .2 Paint indoor switchgear and distribution enclosures light grey to EEMAC 2Y-1.
  - .2 Clean and touch up surfaces of shop-painted equipment scratched or marred during shipment or installation, to match original paint.
  - .3 Clean and prime exposed non-galvanized hangers, racks and fastenings to prevent rusting.
- 1.28 Equipment Identification
- .1 Identify electrical equipment with nameplates as follows:
    - .1 Nameplates:
      - .1 Lamicoid 3 mm thick plastic engraving sheet, black face, white core, mechanically attached with self tapping screws.

NAMEPLATE SIZES			
Size 6	25 x 100 mm	1 line	12 mm high letters
Size 7	25 x 100 mm	2 lines	6 mm high letters

    - .2 Labels:
      - .1 Electronically printed, self-adhesive plastic labels with 6 mm high letters unless specified otherwise.
      - .3 Wording on nameplates to be as indicated c/w volts, phase, amps, HP, etc.
      - .4 Allow for average of twenty-five (25) letters per nameplate.
      - .5 Identification to be English and French.
      - .6 Nameplates for terminal cabinets and junction boxes to indicate system and/or voltage characteristics.
      - .7 Disconnects, starters and contactors: indicate equipment being controlled and voltage, Size 7.
      - .8 Terminal cabinets and pull boxes: indicate system and voltage, Size 7.

- 1.28 Equipment Identification (Cont'd)
- .9 Transformers: indicate capacity, primary and secondary voltages, Size 7.
  - .10 Panelboards nameplate, Size 7.
  - .11 Provide typed circuit directory for each panelboard.
  - .12 Identify all receptacle outlets by panel, circuit number and voltage, with Brother P-Touch labeller.
  - .13 Provide identification on service poles and prewired partitions at 300 mm A.F.F.
  - .14 Provide system, circuit, voltage, phase, etc., on all ceiling space junction box covers, red for fire alarm & emergency circuits, black for others.
  - .15 All circuit protective devices to be c/w a lamacoid label mounted inside door of device listing all fuse type and ratings, circuit breaker settings and minimum interrupting ratings.
  - .16 All switchboards and panelboards to have a permanent lamicaid label mounted on inside of door with minimum circuit breaker interrupting rating.
- 1.29 Wiring Identification
- .1 Identify wiring with permanent indelible identifying markings, either numbered or coloured plastic tapes, on both ends of phase conductors of feeders and branch circuit wiring.
  - .2 Maintain phase sequence and colour coding throughout.
  - .3 Colour code: to CSA C22.1.
  - .4 Use colour coded wires in communication cables, matched throughout system.
- 1.30 Conduit and Cable cables. Identification
- .1 Colour code conduits, boxes and metallic sheathed
  - .2 Code with plastic tape or paint at points where conduit or cable enters wall, ceiling, or floor, and at 15 m intervals.
  - .3 Colours: 25 mm wide prime colour and 20 mm wide auxiliary colour.
- |                        | Prime  | Auxiliary |
|------------------------|--------|-----------|
| up to 250 V            | blue   |           |
| up to 600 V            | yellow |           |
| up to 5 kV             | yellow | blue      |
| up to 15 kV            | yellow | yellow    |
| Voice/data             | green  |           |
| Security               | green  | blue      |
| Fire alarm             | red    |           |
| Emergency power (250V) | red    | blue      |
| Emergency power (600V) | red    | yellow    |
- 1.31 Wiring Terminations
- .1 Lugs, terminals, screws used for termination of wiring to be suitable for either copper or aluminum conductors.

- 1.32 Manufacturers and installed. CSA Labels .1 Visible and legible after equipment is installed.
- 1.33 Location of Outlets .1 Locate outlets as indicated.
- .2 Do not install outlets back-to-back in wall; allow minimum 150 mm horizontal clearance between boxes.
- .3 Change location of outlets at no extra cost or credit, providing distance does not exceed 3000 mm, and information is given before installation.
- .4 Locate light switches on latch side of doors. Locate disconnect devices in mechanical and elevator machine rooms on latch side of door.
- 1.34 Mounting Heights .1 Mounting height of equipment is from finished floor to centreline of equipment unless specified or indicated otherwise.
- .2 If mounting height of equipment is not specified or indicated, verify before proceeding with installation.
- .3 Install electrical equipment at following heights unless indicated otherwise.
- .1 Local switches: 1100 mm.
  - .2 Wall receptacles:
    - .1 General: 400 mm.
    - .2 Above top of continuous baseboard heater: minimum 200 mm.
    - .3 Above top of counters or counter back splashes: 175 mm.
    - .4 In mechanical rooms: 1200 mm.
  - .3 Panelboards: as required by Code or as indicated.
  - .4 Telephone and interphone outlets: 400 mm.
  - .5 'F' indicates floor mounting.
  - .6 'C' indicates ceiling mounted.
  - .7 Wall mounted telephone and interphone outlets: 1100 mm.
  - .8 Fire alarm pull stations: 1200 mm.
  - .9 Fire alarm bells: 2100 mm.
  - .10 Television outlets: 400 mm.
  - .11 Wall mounted speakers: 2100 mm.
  - .12 Clocks: 2100 mm.
  - .13 Door bell pushbuttons: 1100 mm.
  - .14 Thermostats: 1200 mm.
- 1.35 Load Balance .1 Measure phase current to panelboards with normal loads operating. Do tests after space is fully occupied and operational. Adjust branch circuit connections as required to obtain best balance of current between phases and record changes.
- .2 Measure phase voltages at loads and adjust transformer taps to within 2% of rated voltage of equipment, after space is fully occupied and operational.

<u>1.35 Load Balance (Cont'd)</u>	.3	Submit, at completion of work, report listing phase and neutral currents on panelboards, dry-core transformers and motor control centres, operating under normal load. State hour and date on which each load was measured, and voltage at time of test.
<u>1.36 Field Quality Control</u>	.1	Conduct and pay for following tests: .1 Power distribution system including phasing, voltage, grounding and load balancing. .2 Circuits originating from branch distribution panels. .3 Lighting and its control. .4 Motors, heaters and associated control equipment including sequenced operation of systems where applicable. .5 Systems: fire alarm system.
	.2	Furnish manufacturer's certificate or letter confirming that entire installation as it pertains to each system has been installed to manufacturer's instructions.
	.3	Carry out tests in presence of Engineer.
	.4	Provide instruments, meters, equipment and personnel required to conduct tests during and at conclusion of project.
	.5	Submit test results for Engineer's review.
	.6	Hot spot testing: .1 After 24 hours of operation under full load, perform infrared tests on all cable terminations and connections and all transformer, panel and breaker connections, to ensure the integrity of the system. .2 Tests to be carried out by using an infrared camera. .3 Terminations and/or connections failing tests shall be replaced immediately as part of the contract.
<u>1.37 Co-ordination of are Protective Devices</u>	.1	Ensure circuit protective devices such as overcurrent trips, relays and fuses installed to values and settings, as per approved coordination study.
<u>1.38 Fire and Smoke floor Stopping</u>	.1	Provide fire and smoke stopping where conduits, cables, trays, etc., penetrate slabs or fire rated walls with an approved ULC listed putty, equal to 3M caulk CP25 and putty 303.
	.2	Installation of fire stops by trained manufacturers representative.
<u>1.39 Sprinkler- proof authorities Equipment</u>	.1	Provide sprinklerproof equipment in all sprinklered areas to the local requirements.

- 1.40 Access Doors .1 Provide access doors as required by inspection authorities and Engineer to ensure access to concealed electrical work.
- .2 Access doors shall be as specified in Division 09 with fire resistance rating equal to wall or ceiling in which door to be installed. Minimize access door requirements and obtain approval of locations prior to electrical systems installation. Prepare a sketch drawing indicating locations for review by Owner/Architect/Engineer.
- .3 Submit access door shop drawings.

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 26 05 00 - Electrical General Requirements, all electrical sections, and all other disciplines related to the project.
- 1.2 Definitions .1 SRS: acronym for Seismic Restraint System.
- 1.3 General Description .1 This section covers design, supply and installation of complete SRS for all systems, equipment specified for installation on this project by Division 26. This includes, but is not limited to, electrical light fixtures, transformers, MCC's, UPS, diesel generators, fire protection, conduit, communications, electrical equipment and systems, both vibration isolated and statically supported.
- .2 Cable restraint systems, rod stiffener clamps and seismic isolator capacities to be verified by an independent test laboratory. Connection materials and site specific designs to be by the Seismic Engineer. The Seismic Engineer may specify material and anchors provided by the contractor where this is appropriate. It is the contractors' responsibility to ensure that the Seismic Engineers' requirements and specification have been met.
- 1.4 References .1 Canadian Standards Association (CSA)
- .1 CSA S832-14, Seismic Risk Reduction of Operational and Functional Components (OFCs) of Buildings.
- .2 Ontario Regulation
- .1 ONTARIO OBC-2012, 2012 Ontario Building Code.
- 1.5 Submittals .1 Submit shop drawings and product data in accordance with Section 26 05 00 - Electrical General Requirements.
- .2 Submit seismic restraint shop drawings, c/w seal of Professional Engineer registered in Province of Ontario, clearly identifying equipment/systems reviewed and the equipment/systems requiring restraint. Shop drawings must clearly show all forces transferred to structure.
- .3 Seismic Design Engineer shall provide a spreadsheet identifying all equipment and systems requiring or not requiring seismic restraints and include all circulations.
- .4 Submit additional copy of shop drawings and product data to project Structural Engineer for review of connection points to building structure.

1.6 Maintenance Data .1 Provide maintenance data including monitoring requirements for incorporation into manuals specified in Section 26 05 00 - Electrical General Requirements.

1.7 Seismic Force .1 The Importance Factor for this project is:  
.1  $I = 1.0$  - All other buildings i.e.: Office & General Buildings.  
Note: As per OBC.

## **PART 2 - PRODUCTS**

2.1 SRS Manufacturer .1 SRS to be from one manufacturer regularly engaged in production of same, 5 years experience.  
.2 Acceptable materials: Korfund-Sampson, Mason Industries, Tecoustics, Vibra-Sonic Control, Vibron.

2.2 General .1 Design to be by Professional Engineer specializing in design of SRS and registered in Province of Ontario. Division 26 to include all costs associated with this work as it relates to Division 26 installations.  
.2 SRS to be fully integrated into, compatible with:  
.1 Noise and vibration controls specified elsewhere in this project specification, telecommunications.  
.2 Structural, mechanical, electrical design of project.  
.3 During seismic event, SRS to prevent systems and equipment from causing personal injury, interfering with other systems, and from moving from normal position.  
.4 Design and installation in accordance with OBC, CSA S832.  
.5 SRS to provide gentle and steady cushioning action and avoid high impact loads  
.6 SRS to restrain seismic forces in all directions.  
.7 Fasteners and attachment points to resist same load as seismic restraints.  
.8 SRS of conduit systems to be compatible with:  
.1 Expansion, anchoring and guiding requirements.  
.2 Equipment vibration isolation and equipment SRS.  
.9 SRS utilizing cast iron, threaded pipe, other brittle materials not permitted.  
.10 Attachments to RC structure:  
.1 Use high strength mechanical expansion anchors.  
.2 Drilled or power driven anchors not permitted.  
.11 Seismic control measures not to interfere with integrity of firestopping.

- 2.3 SRS for Static Equipment, Systems
- .1 Floor-mounted equipment, systems:
    - .1 Anchor equipment to equipment supports.
    - .2 Anchor equipment supports to structure.
    - .3 Use size of bolts scheduled in approved shop drawings.
  - .2 Suspended equipment, systems:
    - .1 Use one or combination of following methods:
      - .1 Install tight to structure.
      - .2 Cross-brace in all directions.
      - .3 Brace back to structure.
      - .4 Slack cable restraint system.
    - .2 SRS to prevent sway in horizontal plane, "rocking" in vertical plane, sliding and buckling in axial direction.
    - .3 Hanger rods to withstand compressive loading and buckling.
- 2.4 SRS for Vibration Isolated Equipment
- .1 Floor mounted equipment, systems:
    - .1 Use one or combination of following methods:
      - .1 Vibration isolators with built-in snubbers.
      - .2 Vibration isolators and separate snubbers.
      - .3 Built-up snubber system approved by Engineer, consisting of structural elements and elastomeric layer.
    - .2 SRS to resist complete isolator unloading.
    - .3 SRS not to jeopardize noise and vibration isolation systems. Provide 4-8 mm clearance between seismic restraint snubbers and equipment during normal operation of equipment and systems.
    - .4 Cushioning action to be gentle and steady by utilizing elastomeric material or other means in order to avoid high impact loads.
  - .2 Suspended equipment, systems:
    - .1 Use one or combination of following methods:
      - .1 Slack cable restraint system.
      - .2 Brace back to structure via vibration isolators and snubbers.

### **PART 3 - EXECUTION**

- 3.1 Installation
- .1 Install Seismic Restraint Systems in accordance with Seismic Engineer's and manufacturer's recommendations.
  - .2 Install SRS at least 25 mm from all other equipment, systems, services.
  - .3 Co-ordinate connections with all disciplines.
- 3.2 Inspection and Certification
- .1 SRS to be inspected and certified by Manufacturer upon completion of installation.

3.2 Inspection and Certification <u>(Cont'd)</u>	.2	Seismic Design Engineer shall provide written report to Engineer certifying that SRS has been installed in accordance with the SRS drawings. The report shall bear the seal and signature of the SRS Design Engineer.
3.3 Commissioning set <u>Documentation</u>	.1	Upon completion and acceptance of certification, hand over to Engineer complete of construction documents, revised to show "as-built" conditions.

- END OF SECTION -

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 26 05 00 - Electrical General Requirements, all electrical sections, and all other disciplines related to the project.
- 1.2 Location of Conduit .1 Drawings do not indicate all conduit runs. Those indicated are in diagrammatic form only.
- .2 Conduit to be concealed.
- 1.3 References .1 Canadian Standards Association (CSA)
- .1 CSA C22.1HB-15, CE Code Handbook, an Explanation of Rules of the Canadian Electrical Code, Part 1.
- .2 CAN/CSA C22.2 No. 65-13, Wire Connectors.

## **PART 2 - PRODUCTS**

- 2.1 Conduits .1 Electrical metallic tubing EMT, with steel set screw couplings and connectors.
- .2 Flexible steel conduit and liquid-tight flexible metal conduit.
- 2.2 Conduit Fastenings .1 One hole steel straps to secure surface conduits 50 mm and smaller. Two hole steel straps for conduits larger than 50 mm.
- .2 Beam clamps to secure conduits to exposed steel work.
- .3 Channel type supports for two or more conduits at 1.5 m oc.
- .4 Six mm dia threaded rods to support suspended channels.
- 2.3 Conduit Fittings .1 Fittings: manufactured for use with conduit specified. Coating: same as conduit.
- .2 Factory "ells" where 90° bends are required for 25 mm and larger conduits.
- 2.4 Fish Cord .1 Polypropylene.

- 
- 2.5 Building Wires .1 Conductors: stranded for 10 AWG and larger. Minimum size: 12 AWG (including ground wires).
- .2 Copper conductors: size as indicated, with 1000 V insulation of chemically cross-linked thermosetting polyethylene material rated RW90. RWU-90 for buried services.
- 2.6 Armoured Cables .1 Conductors: insulated, copper, size as indicated.
- .2 Type: AC90 XLPE insulation, 600 V rated.
- .3 Armour: interlocking type fabricated from aluminum.
- 2.7 Outlet and Conduit .1 Size boxes in accordance with CSA  
C22.2.1HB. Boxes General
- .2 100 mm square or larger outlet boxes as required for special devices.
- .3 Gang boxes where wiring devices are grouped.
- .4 Blank cover plates for boxes without wiring devices.
- .5 347 V outlet boxes for 347 V switching devices.
- .6 Combination boxes with barriers where outlets for more than one system are grouped.
- 2.8 Sheet Steel Outlet .1 Electro-galvanized steel single and multi gang flush device boxes for flush installation, minimum size 76 x 50 x 38 mm or as indicated. 102 mm square outlet boxes when more than one conduit enters one side with extension and plaster rings as required.
- Boxes
- .2 102 mm square or octagonal outlet boxes for lighting fixture outlets.
- .3 102 mm square outlet boxes with extension and plaster rings for flush mounting devices in finished plaster or tile walls.
- 2.9 Conduit Boxes .1 Cast FS boxes with factory-threaded hubs and mounting feet for surface wiring of all devices.
- 2.10 Box Fittings- .1 Bushing and connectors with nylon insulated  
throats. General
- .2 Knock-out fillers to prevent entry of debris.
- .3 Conduit outlet bodies for conduit up to 32 mm and pull boxes for larger conduits.

- 2.10 Box Fittings-  
General  
(Cont'd) .4 Double locknuts and insulated bushings on sheet metal boxes.
- 2.11 Wire and Box  
copper Connectors .1 Pressure type wire connectors: with current carrying parts of copper sized to fit conductors as required. Equal to T&B-PT Series.
- .2 Bushing stud connectors: to EEMAC 1Y-2 to consist of:  
.1 Connector body and stud clamp for stranded copper conductors.
- .3 Clamps or connectors for armoured cable as required.
- 2.12 Support Channels .1 U shape, size 41 x 41 mm, 2.5 mm thick, surface mounted or suspended. Equal to Unistrut, Burndy or Cantruss.

### **PART 3 - EXECUTION**

- 3.1 Installation .1 Conduit Systems:
- .1 Install conduits to conserve headroom in exposed locations and cause i minimum interference in spaces through which they pass.
- .2 Conceal conduits except in mechanical and electrical service rooms.
- .3 Use electrical metallic tubing EMT except in where indicated or specified elsewhere.
- .4 Use liquid tight flexible metal conduit for connection to motors which may vibrate or must be moved for servicing.
- .5 Use liquid tight flexible metal conduit for connection to equipment in damp, wet or corrosive locations.
- .6 Minimum conduit size 21 mm.
- .7 Bend conduit cold. Replace conduit if kinked or flattened more than 1/10th of its original diameter.
- .8 Mechanically bend steel conduit over 21 mm dia.
- .9 Install fish cord in empty conduits.
- .10 Where conduits become blocked, remove and replace blocked section. Do not use liquids to clean out conduits.
- .11 Dry conduits out before installing wire.
- .12 Run parallel or perpendicular to building lines.
- .13 Locate conduits behind infrared or gas fired heaters with 1.5 m clearance.
- .14 Run conduits in flanged portion of structural steel.
- .15 Group conduits wherever possible on channels.
- .16 Do not pass conduits through structural members except as indicated.
- .17 Do not locate conduits less than 75 mm parallel to steam or hot water lines with minimum of 25 mm at crossovers.
- .18 Slope conduits to provide drainage.
- .19 Ream raceways to remove burrs.
- .20 Provide nylon pull cord in all empty raceways.

3.1 Installation  
(Cont'd)

- .2 Wiring:
  - .1 Install RW-90 conductors in raceways except as otherwise indicated.
  - .2 Installation of type AC-90 will be permitted from:
    - .1 Conduit system junction boxes to recessed lighting fixtures in suspended ceilings, maximum length 2.5 m each run.
    - .2 Conduit system junction boxes to hollow gypsum partitions, maximum length 2.5 m each run.
    - .3 AC-90 is permitted in hollow gypsum partitions.
    - .4 AC-90 is not permitted in insulated masonry walls or concrete walls.
  - .3 Leave minimum 200 mm length of conductor at junction and outlet boxes.
  - .4 Splices shall not be pulled into conduits.
  - .5 Group AC-90 cables where possible. Do not bundle.
  - .6 Provide approved wire pulling lubricants for cable installations in conduits.
- .3 Outlet boxes:
  - .1 Support boxes independently of connecting conduits.
  - .2 Fill boxes with paper, sponges or foam or similar approved material to prevent entry of debris during construction. Remove upon completion of work.
  - .3 For flush installations mount outlets flush with finished wall using plaster rings to permit wall finish to come within 6 mm of opening.
  - .4 Provide correct size of openings in boxes for conduit, mineral insulated and armoured cable connections. Reducing washers are not allowed.
  - .5 Provide circuit number identification on all junction boxes with black marker.
- .4 Wire and Box Connections:
  - .1 Remove insulation carefully from ends of conductors and:
    - .1 Install mechanical pressure type connectors and tighten screws with appropriate compression tool recommended by manufacturer. Installation shall meet secureness tests in accordance with CAN/CSA C22.2 No. 65.
    - .2 Install fixture type connectors and tighten. Replace insulating cap.
    - .3 Install bushing stud connectors in accordance with EEMAC 1Y-2.
- .5 Fastenings and Supports:
  - .1 Secure equipment to hollow masonry, tile and plaster surfaces with lead anchors or nylon shields.
  - .2 Secure equipment to poured concrete with expandable inserts.
  - .3 Secure surface mounted equipment with twist clip fasteners to inverted T-bar ceilings. Ensure that T-bars are adequately supported to carry weight of equipment specified before installation. Provide additional supports to T-bar ceiling as required.
  - .4 Support equipment, conduit or cables using clips, spring loaded bolts, cable clamps designed as accessories to basic channel members.
  - .5 Fasten exposed conduit or cables to building construction or support system using straps.
    - .1 One-hole steel straps to secure surface conduits and cables 50 mm and smaller.
    - .2 Two-hole steel straps for conduits and cables larger than 50 mm.
    - .3 Beam clamps to secure conduit to exposed steel work.
  - .6 Suspended support systems.
    - .1 Support individual cable or conduit runs with 6 mm dia threaded rods and spring clips.

- 3.1 Installation (Cont'd) .5 (Cont'd)
- (Cont'd) .6 (Cont'd)
- .2 Support 2 or more cables or conduits on channels supported by 6 mm dia. threaded rod hangers where direct fastening to building construction is impractical.
  - .7 For surface mounting of two or more conduits use channels at 1.5 m oc spacing.
  - .8 Provide metal brackets, frames, hangers, clamps and related types of support structures where indicated or as required to support conduit and cable runs.
  - .9 Ensure adequate support for raceways and cables dropped vertically to equipment where there is no wall support.
  - .10 Do not use wire lashing or perforated strap to support or secure raceways or cables.
  - .11 Do not use supports or equipment installed for other trades for conduit or cable support except with permission of other trade and approval of Engineer.
  - .12 Install fastenings and supports as required for each type of equipment cables and conduits, and in accordance with manufacturer's installation recommendations.

- END OF SECTION -

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 26 05 00 - Electrical General Requirements, all electrical sections, and all other disciplines related to the project.

## **PART 2 - PRODUCTS**

- 2.1 Equipment .1 Clamps for grounding of conductor: size as indicated as required to electrically conductive underground water pipe.
- .2 Grounding conductors: bare stranded copper, tinned, soft annealed.
- .3 Insulated grounding conductors: green, type RW90.
- .4 Non-corroding accessories necessary for grounding system, type, size, material as indicated, including but not necessarily limited to:
- .1 Grounding and bonding bushings.
  - .2 Protective type clamps.
  - .3 Bolted type conductor connectors.
  - .4 Thermit welded type conductor connectors.
  - .5 Bonding jumpers, straps.
  - .6 Compression wire connectors.

## **PART 3 - EXECUTION**

- 3.1 Installation General .1 Install complete permanent, continuous grounding and bonding system including, conductors, connectors, accessories.
- .2 Install connectors in accordance with manufacturer's instructions.
- .3 Protect all exposed grounding conductors from mechanical injury.
- .4 Use compression connectors for grounding connections to equipment provided with lugs.
- .5 Soldered joints not permitted.
- .6 Install bonding wire for flexible conduit, connected at both ends to grounding bushing, solderless lug, clamp or cup washer and screw. Neatly cleat bonding wire to exterior of flexible conduit.
- .7 Make grounding connections in radial configuration only, with connections terminating at single grounding point. Avoid loop connections.

- |   |        |  |
|---|--------|--|
| <u>3.1 Installation General<br/>(Cont'd)</u>              | .8     | Provide continuous ground conductor for raceways, outlets, and junction boxes for all systems.   |
|   | .9     | Provide a ground conductor in all EMT conduits.  |
|   | .10    | Provide ground conductor for all non conductive raceways.  |
|   | .11    | Ground all systems raceways, provide ground bushings.  |
| <br><u>3.2 Equipment<br/>necessarily <u>Grounding</u></u> | <br>.1 | <br>Install grounding connections to typical equipment included in, but not limited to following list service equipment, transformers, switchgear, duct systems, frames of motors, motor control centres, starters, control panels, building steel work, generators, elevators and escalators, distribution panels, outdoor lighting, communications systems and conduits, raised floors, etc. |
| <br><u>3.3 Field Quality Control</u>                      | <br>.1 | <br>Perform tests in accordance with Section 26 05 00 - Electrical General Requirements.   |
|   | .2     | Perform ground continuity and resistance tests using method appropriate to site conditions and to approval of Engineer and local authority having jurisdiction over installation.  |
|   | .3     | Perform tests before energizing electrical system.   |
|   | .4     | Disconnect ground fault indicator during tests.  |

- END OF SECTION -

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 26 05 00 - Electrical General Requirements, all electrical sections, and all other disciplines related to the project.
- 1.2 References .1 Canadian Standards Association (CSA International).
- 1.3 Shop Drawings and Product Data .1 Submit shop drawings and product data in accordance with Section 26 05 00 - Electrical General Requirements.
- .2 Coordination study, refer to Section 26 05 01 - System Coordination/Short Circuit/Device Evaluation Study & Arc Flash Hazard.
- 1.4 Acceptable Manufacturers .1 Eaton Cutler/Hammer.
- .2 Siemens.
- .3 Schneider/Square D.
- .4 G.E.
- .5 Equipment supplied shall be of a single manufacturer.
- 1.5 Spare Parts .1 Provide three spare fuses of each size and type installed in this project.
- 1.6 Ratings .1 Equipment supplied shall have interrupting capacities in excess of currents calculated in the short circuit study.
- 1.7 Overcurrent Protection .1 Confirm overcurrent protection requirements of equipment supplied by Divisions 20, 21, 22 & 23, Architectural Divisions and equipment supplied by Owner prior to installation.

## **PART 2 - PRODUCTS**

- 2.1 Disconnect Switches .1 Heavy duty fusible and non-fusible, disconnect switch in CSA Enclosure I, size as indicated. CSA 3 Enclosure in outdoor or damp locations. Arc quencher and visible blade copper terminals.
- .2 Provision for padlocking in on-off switch position.
- .3 Mechanically interlocked door to prevent opening when handle in ON position.
- .4 Fuses: size as indicated.
- .5 Quick make, quick break type.
- 2.2 Moulded Case Circuit and Breakers .1 Bolt-on moulded case circuit breaker: quick- make, quick-break type, for manual automatic operation with temperature compensation for 40°C ambient.
- .2 Common-trip breakers: with single handle for multi-pole applications.
- .3 Circuit breakers with interchangeable trips as indicated.
- .4 Moulded case circuit breaker to operate automatically by means of thermal and magnetic tripping devices to provide inverse time current tripping and instantaneous tripping for short circuit protection.

## **PART 3 - EXECUTION**

- 3.1 Installation .1 Confirm equipment locations and sizes in electrical and mechanical rooms to ensure equipment will fit.
- .2 Secure floor and wall mounted equipment plumb and square.
- .3 Connect supply and load feeders from all equipment.
- .4 Check trip unit and fuse ratings to match those recommended in coordination study.
- .5 Check factory made connections for secureness and electrical continuity.
- .6 Install fuses as required.
- .7 Ensure adequate clearances around equipment for ventilation requirements and code.
- .8 Provide auxiliary equipment and connections as required.
- .9 Provide typed, dated panel directory for each affected panelboard on this project.

- END OF SECTION -

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 26 05 00 - Electrical General Requirements, all electrical sections, and all other disciplines related to the project.
- 1.2 Shop Drawings and Product Data .1 Submit shop drawings and product data in accordance with Section 26 05 00 - Electrical General Requirements.
- 1.3 Equipment .1 Receptacle and switch devices shall be of a single manufacturer.  
.2 Acceptable manufacturers: Hubbell, Arrow Hart, Pass and Seymour, Leviton, Bryant.
- 1.4 References .1 Canadian Standards Association (CSA).

## **PART 2 - PRODUCTS**

- 2.1 Switches .1 15 or 20 A, 120 V, or 347 V single pole, double pole, three-way, four-way switches as required.
- .2 Manually-operated general purpose ac switches with following features:  
.1 Silver alloy contacts.  
.2 Urea or melamine molding for parts subject to carbon tracking.  
.3 Suitable for back and side wiring.  
.4 White toggle.  
.5 Specification Grade.
- .3 Switches equal to the following:  
.1 120 V, 15 A - Hubbell #1201.  
.2 120 V, 15 A , Keyed - Hubbell #1201-L.  
.3 120 V, 15 A, 3-way - Hubbell #1203.  
.4 120 V, 15 A, 4-way - Hubbell #1204.  
.5 347 V, 15 A - Hubbell #18201.  
.6 347 V, 20 A - Hubbell #18221.  
.7 347 V, 20 A, 3-way - Hubbell #18223.  
.8 Wall mounted occupancy switches, white, 1500 W rated equal to Hubbell #WSS-120 c/w relay pack.  
.9 Ceiling mounted occupancy switches:  
.1 Hallway (narrow).  
.2 Area (wide).

- 2.2 Receptacles .1 Duplex receptacles, CSA type, voltage, ampacity, phase as indicated, with following features:
- .1 White urea molded housing.
  - .2 Suitable for No. 10 AWG for back and side wiring.
  - .3 Break-off links for use as split receptacles.
  - .4 Eight back wired entrances, four side wiring screws.
  - .5 Triple wipe contacts and riveted grounding contacts.
  - .6 Ground fault interrupter 5 mA, Class 'A' type where indicated.
  - .7 Surge suppressor type where indicated.
  - .8 Child safety receptacles where indicated.
  - .9 Provide receptacles equal to the following:
    - .1 15 A, 120 V, - Hubbell #5262.
    - .2 20 A, 120 V, - Hubbell #6331.
    - .3 20 A, 250 V, - Hubbell #6391.
    - .4 30 A, 125/250 V (Dryer) - Hubbell #9430-P.
    - .5 50 A, 125/250 V (Range) - Hubbell #9450-P.
    - .6 Isolated ground - Hubbell #IG-5262.
    - .7 Ground fault - Hubbell #GF5252-W.
    - .8 Safety receptacles - Hubbell #SG-62-HI.
    - .9 Surge suppressor - Hubbell #5252-S.
  - .10 Specification grade.
- 2.3 Cover Plates .1 Sheet steel utility box cover for wiring devices installed in surface-mounted utility boxes.
- .2 Stainless steel, vertically brushed, 1 mm thick cover plates for wiring devices mounted in flush-mounted outlet box.
  - .3 Cast cover plates for wiring devices mounted in surface-mounted FS or FD type conduit boxes.
- 2.4 Telephone, Data & accessible Cable TV Outlet .1 Provide 100 x 100 mm outlet box c/w plaster ring and 21 mm EMT to ceiling space at indicated locations.
- .2 Coverplates to be provided by respective companies or as specified in other sections.

### **PART 3 - EXECUTION**

- 3.1 Installation .1 Switches:
- .1 Install single throw switches with handle in "UP" position when switch closed.
  - .2 Install switches in gang type outlet box when more than one switch is required in one location.
  - .3 Mount toggle switches at height specified in Section 26 05 00 - Electrical General Requirements or as indicated.

3.1 Installation  
(Cont'd)

- .2 Receptacles:
  - .1 Install receptacles in gang type outlet box when more than one receptacle is required in one location.
  - .2 Mount receptacles at height specified in Section 26 05 00 - Electrical General Requirements or as indicated.
  - .3 Where split receptacle has one portion switched, mount vertically and switch upper portion.
- .3 Coverplates:
  - .1 Protect stainless steel cover plate finish with paper or plastic film until painting and other work is finished.
  - .2 Install suitable common cover plates where wiring devices are grouped.
  - .3 Do not use coverplates meant for flush outlet boxes on surface-mounted boxes.
- .4 Provide weatherproof devices as indicated.

- END OF SECTION -

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 26 05 00 - Electrical General Requirements, all electrical sections, and all other disciplines related to the project.
- 1.2 Shop Drawings and General Product Data .1 Submit shop drawings in accordance with Section 26 05 00 - Electrical Requirements.
- 1.3 References .1 American National Standards Institute (ANSI)  
.1 ANSI C62.1, Gapped Silicon-Carbide Surge Arresters for AC Power Circuits.  
.2 Canadian Standards Association (CSA).  
.1 CSA C22.2 No. 141-15, Emergency Lighting Equipment.  
.2 CSA C860-11(2016), Performance of Internally Lighted Exit Signs.  
.3 Institute of Electrical and Electronics Engineers (IEEE)  
.1 IEEE 587, Applicability to Adjustable Frequency Control (Surge Voltages).

## **PART 2 - PRODUCTS**

- 2.1 Lamps .1 Incandescent lamps as indicated on fixture list, 5000 hr. life minimum.  
.2 Fluorescent lamps as indicated on fixture list, and as follows:  
.1 32 Watt, T8, 3050 Lumens, 20,000 hr. life. Low mercury content (Philips Alto or equivalent).  
.2 Compact fluorescent lamps, wattage as indicated, 10,000 hr. life low mercury content (Philips Alto or equivalent).  
.3 Colour temperature 3500°K or as indicated on Lighting Fixture Schedule or to match existing. Use 3000°K or 4100°K only as indicated or to match existing lamps (3000°K to match warm white, 4100°K to match cool white).  
.4 CRI minimum 85.
- 2.2 Ballasts .1 Fluorescent ballast: CBM and CSA certified, energy efficient type, IC electronic, rapid start:  
.1 Rating: voltage as indicated, for use with 2-32 W lamps, rapid start.  
.2 RFI/EMI suppression circuit.  
.3 Totally encased and designed for 40°C ambient temperature.  
.4 Power factor: minimum 95% with 95% of rated lamp lumens.  
.5 Crest factor: 1.7 maximum.  
.6 Capacitor: thermally protected.  
.7 Thermal protection: non-resettable on coil.  
.8 Harmonics: 10% maximum THD.

- 2.2 Ballasts (Cont'd) .1 (Cont'd)
- .9 Operating frequency of electronic ballast: 20 kHz or greater without visible flicker.
  - .10 Sound rated: A.
  - .11 Mounting: integral with luminaire.
  - .12 Include line surge withstand to ANSI C62-1 and IEEE 587. Lamp start voltages not to exceed ANSI C78.1.
  - .13 Ballast factor: greater than 0.9.
- 2.3 Finishes .1 Light fixtures to be factory primed and painted after fixture construction.
- 2.4 Fluorescent Fixture minimum. Light Control Device .1 Lens thickness: 3.175 mm
- .2 Material: injection moulded clear prismatic virgin acrylic.
  - .3 Frame: hinged,gasketed, latched, die cast, aluminum.
- 2.5 Luminaires .1 Provide light fixtures as per fixture schedule, c/w ballasts, lamps and mounting accessories.
- .2 Each 347V fluorescent luminaire shall have an integral disconnecting means as per the Canadian Electrical Code.
- 2.6 Exit Lights .1 Exit lights: to CSA C22.2 No. 141 and CSA C860.
- .2 Housing: extruded aluminum, white finish.
  - .3 Face and back plates: extruded aluminum.
  - .4 Lamps: LED with 25-year rated life.
  - .5 Pictogram: aluminum frame, opal diffuser panel, pictogram panel with multiple films for direction selection, and clear protective panel. Pictogram panel shall consist of green pictogram and white graphic symbol meeting the visibility specifications referred to in ISO 3864-1, and conform to the dimensions indicated in ISO 7010.
  - .6 Suitable for 347V or 120V normal supply and emergency supply.
  - .7 Die cast mounting bracket for wall, ceiling, or end mounting as indicated.
  - .8 Provide circuit labels at all exit signs.

### **PART 3 - EXECUTION**

- 3.1 Installation .1 Locate and install luminaires as indicated.
- .2 Provide sufficient cable length and/or access panels, to provide access to wiring connections in hard ceiling areas, to the inspection authorities requirements.
- .3 Install light fixtures to manufacturers recommendations.
- .4 Connect fixtures to indicated circuits and connect exit lights to emergency battery units.
- .5 Verify and coordinate location of light fixtures on site with other trades to verify clearances at indicated locations prior to installation.
- 3.2 Luminaire Supports .1 For recessed or surface mounted lighting in suspended ceiling installations, support luminaires independently from ceiling, by means of a minimum of two chain hangers bolted to diagonal corners of the fixture body and secured to building structure in accordance with ESA, Section 26 05 00 - Electrical General Requirements and Section 26 05 05 - Seismic Restraint Systems (SRS).
- 3.3 Luminaire Alignment .1 Align luminaires mounted in continuous rows to form straight uninterrupted line.
- .2 Align luminaires mounted individually parallel or perpendicular to building grid lines.
- 3.4 Testing .1 Verify operation of lighting systems, and controls.
- 3.5 Lamp Guarantee .1 Replace all fluorescent lamps burnt out within 24 months of final acceptance.

- END OF SECTION -

## **PART 1 - GENERAL**

- 1.1 Related Sections .1 This section shall be read in conjunction with specification Section 26 05 00 - Electrical General Requirements, all electrical sections, and all other disciplines related to the project.
- 1.2 References .1 Underwriters Laboratories of Canada (ULC)  
.1 CAN/ULC S524-14, Installation of Fire Alarm Systems.  
.2 CAN/ULC S525-16, Audible Signal Devices for Fire Alarm Systems, Including Accessories.  
.3 CAN/ULC S527-11-AMD-1 (2014), Control Units for Fire Alarm Systems.  
.4 CAN/ULC S536-13, Inspection and Testing of Fire Alarm Systems.  
.5 CAN/ULC S537-13, Verification of Fire Alarm Systems.  
.2 National Research Council Canada  
.1 NRCC NBCC-2015, National Building Code of Canada 2015.
- 1.3 Description of EST. System .1 Existing systems in both buildings M2 and M59 are Edwards
- 1.4 Shop Drawings .1 Submit shop drawings in accordance with Section 26 05 00 - Electrical General Requirements.  
.2 Include:  
.1 Layout of equipment.  
.2 System addresses.  
.3 Complete wiring diagram, including schematics of modules.  
.4 Graphic plot plan c/w addresses.
- 1.5 Operation and into Maintenance Data .1 Provide operation and maintenance data for Fire Alarm System for incorporation manuals.  
.2 Include:  
.1 Operation and maintenance instructions for complete fire alarm system to permit effective operation and maintenance.  
.2 Technical data - illustrated parts lists with parts catalogue numbers.  
.3 Copy of approved shop drawings.
- 1.6 Maintenance Electrical Materials .1 Provide maintenance materials in accordance with Section 26 05 00 - General Requirements.

- 1.6 Maintenance Materials (Cont'd) .2 Include:  
.1 Provide a list of recommended spare parts. In the case of a standard spares kit, the content of the kit shall be listed.
- 1.7 As-Builts .1 Provide 'as-builts' drawings upon completion showing all devices c/w addresses including line isolator locations and conduit runs.

## **PART 2 - PRODUCTS**

- 2.1 Materials .1 Equipment and devices: ULC listed and labelled and supplied by single manufacturer. Addressable type unless otherwise noted.  
.2 Power supply: to CAN/ULC S524, and NBCC.  
.3 Audible signal devices: to ULC S525.  
.4 Control unit: to ULC S527.
- 2.2 Audible/Visual Signal tube Devices .1 Horns/Strobe unit, 24 V dc, current limiting electronics, red flush mounted, Zenon 15-75cd.  
.2 Bells: vibrating type, gongs of special alloy steel, 24 VDC, 150 mm, 90 dB.

## **PART 3 - EXECUTION**

- 3.1 Installation .1 Install systems in accordance with CAN/ULC S524.  
.2 Locate and install bells and horns and connect to signalling circuits.  
.3 Connect signalling circuits to main control panel. Alternate signal circuits within floor space, i.e., circuit 'A' device adjacent to circuit 'B' device.  
.4 Install all wiring for fire alarm system monitoring, control and communication circuits in conduit. Minimum conduit size shall be 21 mm. All wiring must be clear of shorts, opens and grounds on completion of installation. All wires must be clearly identified at all termination points.  
.5 Ensure wire and cable are copper conductors with insulation rated at 300 V minimum, as follows:  
.1 Fire alarm addressable circuits shall be #18 AWG twisted shielded pair. Maximum allowable length of run (wire distance) must not exceed 762 m.  
.2 Signal circuit: 300 V 105°C PVC insulated copper conductors. Minimum conductor size #12 AWG. Voltage drop must not exceed the maximum permissible value recommended by the manufacturer.

- 3.1 Installation (Cont'd)
- .5 (Cont'd)
  - .3 All wiring to be in conduit.
  - .6 Ground panel and conduits.
  - .7 All Fire Alarm devices shall have both the device and it's base labelled with p-touch to indicate building (if in a campus), floor, column line, device type. i.e. device labelled as T2-5-G3-SD would indicate tower 2, floor 5, column G3, smoke detector. This description should also be indicated at the annunciator and control panel.
  - .8 All fire alarm work is to be logged in at the main security station by the contractor, and shall indicate the location of the work, a description of the work, and the name of the contractor performing the work.
  - .9 The installing contractor shall notify the building owner of verification times, so the owner can include their maintenance contractor in review.
- 3.2 Field Quality Control
- .1 Perform tests in accordance with Section 26 05 00 - Electrical General Requirements. and CAN/ULC S536.
  - .2 Fire alarm system:
    - .1 Test each device and alarm circuit to ensure manual stations, thermal and smoke detectors transmit alarm to control panel and actuate general alarm ancillary devices.
    - .2 Test to demonstrate correct operation of each interlock device, auxiliary device, by-pass switches.
    - .3 Check annunciator panels to ensure zones are shown correctly.
    - .4 Simulate grounds and breaks on alarm and signalling circuits to ensure proper operation of trouble signals and the capability for providing a subsequent alarm during any imposed single circuit fault condition (open, ground).
    - .5 Perform the system verification and certification per Clause 3.3 "Verification and Certification".
- 3.3 Certification and S537". Verification
- .1 Verify system to "CAN/ULC
  - .2 Verification is the responsibility of the manufacturer for testing the wiring in relation to field devices operation.
  - .3 To avoid unnecessary alarms during testing, the system's program shall be capable of being temporarily disabled to disconnect only the audible signals that are being tested. Reenable the zones after the testing is performed at the end of the day.
  - .4 Inspect and test wiring to every device to verify the removal of the device or breaking the wire will cause a trouble condition at the Control Panel.
  - .5 Inspect all equipment installed as part of the system for visible damage or tampering which may be a potential problem with its intended operation.
  - .6 Activate each manual initiating device to verify and ensure their proper operation.

3.3 Certification and  
Verification  
(Cont'd)

- .7 Test each self-restoring heat detector utilizing a heat source to test the device operation.
- .8 Test each ionization smoke detector. Detector operation shall be tested by introducing "smoke" into the detector head.
- .9 Test all audible signals for proper operation. Tests shall be made to determine that the signal is audible throughout the area and above the normal ambient noise level.
- .10 Verify all field wiring and terminate on a single conductor per terminals basis.
- .11 Test system annunciators to ensure proper operation correct zoning and visibility of window inscriptions. All lamps and indicators shall be tested for proper operation.
- .12 Test all control equipment for proper operation. Inspect and test all cable terminals, plug connectors, plug-in modules circuitry, lamp sockets and controls to confirm that their mechanical and electrical connections and mounting are acceptable to confirm their electrical supervision.
- .13 Test ancillary equipment connections. Inspect such equipment to ensure that faults and malfunctions will not interfere with the alarm system.
- .14 Test the following control functions for proper supervision, operation and annunciation.
  - .1 The Central station connection.
- .15 Only make changes to the system program or zone identifications as approved by authorized personnel.
- .16 Notify and demonstrate the complete system to Owner's representative and Building Inspection's representatives only after testing and verification performances has been completed and all deficiencies rectified. In their presence, demonstrate the proper functioning of the system. Have system manufacturer's certified technician present.
- .17 Upon completion of the inspection and when all of the above conditions have been performed and complied with, the manufacturer shall issue to the Owner's representative the following:
  - .1 A copy of the inspection report identifying the location of each device and certifying the test results of each device.
  - .2 A certificate of verification confirming that the inspection has been completed and outlining the conditions upon which such an inspection and certification have been rendered.
  - .3 Proof of liability insurance for the inspection.
- .18 All costs involved in this inspection for both the manufacturer's and the Contractor's work shall be included in the overall tender price.

3.4 Verification Records

- .1 Complete accurate records of the verification shall be maintained with the following requirements but not limited to:
  - .1 Show the date on which each device and equipment has been verified.
  - .2 Show the date of all deficiencies encountered in the control system equipment, wiring and field devices.
  - .3 Show the date when the deficiencies have been corrected and re-verified.

3.4 Verification Records .1  
(Cont'd)

- (Cont'd)  
.4 Show dB levels measured during verification.

3.5 Integrated Systems .1  
Testing

- Fire Alarm System:
- .1 Following are tests required to show system integration with other systems.
  - .2 Initiate a fire alarm via a manual pull station verify the following:
    - .1 Alarm initiated.
    - .2 Elevators return to ground level.
    - .3 Signal sent to central alarm facility.
    - .4 Signal sent to building automation system for fan shutdown.
    - .5 Signal sent to security system.
    - .6 Alarm annunciates at fire control panel.
    - .7 Magnetic hold open devices release & door close.
    - .8 Fire shutters release & close.
    - .9 Pressurization and/or smoke EVAC fans start.
    - .10 All magnetically locked doors release.
    - .11 Audible devices are operating.
  - .3 Verify connection to fire pump for power available monitoring by disconnecting normal & emergency source to fire pump.
  - .4 Verify generator set monitoring by initiating a trouble & alarm condition at generator.
  - .5 Throughout the tests utilize the emergency voice communications systems for instructions & verifications at various levels.
  - .6 Initiate a first stage alarm and allow verification timer to time out and start second stage alarm.
  - .7 Verify connections to elevators.

RE: Project-Specific Designated Substances and Hazardous Materials Survey  
Buildings M-2 and M-59-Washrooms Renovation Project  
NRC Project Numbers 5378 & 5379

DST File No.: GV-OT-026477

## 1.0 INTRODUCTION

DST Consulting Engineers Inc. (DST) was retained by the National Research Council (NRC) to conduct a Project-Specific Designated Substances and Hazardous Materials Survey (DSHMS) for the M-2 and M-59 Washrooms Renovation Project prior to planned renovation work.

The Designated Substances Report is required under the Ontario Occupational Health and Safety Act in order to identify designated substances that may be present within the project areas. The Canada Labour Code also stipulates under Part II, Section 124 that every employer shall ensure that the health and safety at work of every person employed by the employer is protected. By having a DSHMS conducted, NRC will be able to inform employees, contractors, and tenants of any designated substances that may be present and possibly disturbed throughout the planned renovation work.

DST staff completed a visual evaluation of building materials for the presence of suspected designated substances and select hazardous materials in the project areas on May 26, 2016 and June 1, 2016.

## 2.0 SCOPE OF WORK

The survey implemented by DST included the 11 designated substances listed in Section 30 of the Occupational Health and Safety Act, R.S.O. 1990, Chapter O.1. Designated Substances, as identified under the Ontario Occupational Health and Safety Act, are as follows:

- Acrylonitrile;
- Arsenic;
- Asbestos-Containing Materials (ACMs) - both friable and non-friable;
- Benzene;
- Coke Oven Emissions;
- Ethylene Oxide;
- Isocyanates;
- Lead;
- Mercury;
- Silica; and
- Vinyl Chloride.

Other Hazardous Materials which are not classified as Designated Substances, but were included as part of the survey and considered pertinent due to applicable regulations, best practice guidelines and/or potential risks to human health and/or the environment, are:

- Polychlorinated Biphenyls (PCBs);
- Mould;
- Ozone-depleting substances; and
- Other hazardous materials, as deemed pertinent.

### **3.0 METHODOLOGY**

The field program for this survey was completed by DST on May 26, 2016 and June 1, 2016. The survey was limited to the following project areas:

#### **Building M-2**

- Room 124 – Washroom, and Room 124A – Janitor's Closet
- Room 133 – Storage room, including the area directly below at basement level, the basement floor slab directly below, and adjacent dumbwaiter shaft
- Room 271
- Rooms 147 and 148 – Control Room and offices
- Roofing material above Rooms 238/253

#### **Building M-59**

- Room 104 - Washroom
- Room 115 - Washroom
- Room 128 - Washroom
- Room 129 - Washroom

No other areas of the building were included as part of this project-specific DSHMS.

At the request of NRC, DST performed all ceiling entries during the DSMS using Type 2 asbestos precautions.

Materials suspected of containing designated substances were visually identified, based on the surveyor's knowledge of the historical composition of building products. Equipment that may contain polychlorinated biphenyls (e.g. electrical transformers and fluorescent light ballasts) can often be identified by examining manufacturer's labels. For safety reasons, DST personnel do not remove the ballast shields from fluorescent light fixtures to examine the ballast codes unless the electrical circuit for the lighting has been tagged and locked out by a qualified electrician. Visual identification of materials suspected to contain asbestos or lead (in paint) was supported by the collection and analysis of a limited number of representative samples, where applicable. Materials suspected of containing designated substances other than asbestos or lead (in paint) were identified by appearance, age, and knowledge of historical applications.

In Ontario, a material is defined as an Asbestos-Containing Material (ACM) if the material has a minimum asbestos content of 0.5 per cent (%) by dry weight, as O. Reg. 278/05, as amended. ACMs can be divided into two categories: friable and non-friable material. A friable ACM is a material that can be crumbled, powdered, or pulverized by hand pressure and can readily release

fibres when disturbed. Common applications of friable ACMs are sprayed or trowelled surfacing materials (e.g. sprayed fireproofing and textured coatings) as well as mechanical and thermal insulation. Non-friable materials are materials that will generally release fibres only when cut or shaped. Common non-friable ACMs include vinyl floor products, caulking applications, asbestos textile products and asbestos cement products (transite). Some of these products may become friable with time or when disturbed.

Representative bulk samples of suspected ACMs were collected by DST during the site investigations. Bulk asbestos samples were collected in order to meet the bulk sampling requirements stipulated in *O.Reg. 278/05, as amended*. Bulk samples were submitted to and analyzed by Paracel Laboratories Ltd. (Paracel). The bulk samples were analyzed using polarised light microscopy (PLM). This analytical method complies with the United States Environmental Protection Agency (U.S. EPA) Method 600/R-93/116 dated July, 1993, which is the regulatory approved protocol for bulk asbestos analysis in Ontario.

All bulk samples were analyzed using a combination of dispersion staining and polarised light microscopy (PLM). This analytical method complies with the United States Environmental Protection Agency (U.S. EPA) Method 600/R-93/116 dated July 1993, which is the regulatory approved protocol for bulk asbestos analysis in Ontario.

With regards to lead in paint, although the Ontario Ministry of Labour (MoL) has published a guideline for control of lead exposures on construction projects in Ontario, it does not include criteria for the classification of lead-paint. Instead, it uses presumed airborne lead concentrations for specific tasks as criteria for classifying work. The Environmental Abatement Council of Ontario (EACO) has published the Lead Guideline for Construction, Renovation, Maintenance or Repair (October 2014). This document outlines that *Paints or surface coatings containing less than or equal to 0.1% lead by weight (1000 ug/g or 1000 mg/kg or 1000 ppm lead) are considered low-level lead paints or surface coatings. If these materials (and the surfaces to which they are applied) are disturbed in a non-aggressive manner, performed using normal dust control procedures and are completed so that the TWA [Time Weighted Average] for PNOS [Particles Not Otherwise Specified] is not exceeded, then worker protection from the inhalation of lead is not required.* For the purposes of this survey and as specifically instructed by CBRE, paint applications having a lead concentration above 0.1% (1,000 ppm) detectable concentrations of lead are considered to be lead-based.

Representative lead paint samples were collected and submitted by DST for lead content analysis. The samples were analyzed at Paracel using Inductively Coupled Plasma – Optical Emission Spectrometry (ICP-OES) in accordance with MOE E3470, ICP-OES.

DST also collected samples of ceramic tile for analysis of the tile glazing for lead analysis using an X-Ray Fluorescence (XRF) analyzer.

Selected photographs are included in Appendix A. Bulk asbestos and lead analytical results are included in Appendix B. Floor plans showing the sample locations are included in Appendix C.

#### **4.0 BACKGROUND REPORT REVIEW**

Prior to the DSHMS, the NRC provided DST with the following documents:

- Designated Substances Survey, Building M-02, March 2007, Oakhill Environmental Inc.
- Designated Substances Survey, Building M-59, March 2009, Oakhill Environmental Inc.

DST referenced any previously identified confirmed or assumed asbestos-containing materials or other designated substances as they pertained to the scope of work for this project.

## 5.0 FINDINGS

### 5.1. Asbestos – Building M-2

Based on a review of previous documentation as it pertains to the project areas, the following ACMs were historically identified by Oakhill Environmental:

- Aircell pipe insulation, containing 30% Chrysotile;
- Grey cement compound on pipe fittings, containing 20% Chrysotile;
- Sweatwrap pipe insulation, containing 15% Chrysotile asbestos; and
- Magblock pipe insulation, containing 27% Chrysotile.

Table 1 below presents the findings of bulk asbestos material samples collected by DST from the Building M-2 project areas, based on visual observations at the time of the site survey:

Table 1: Summary of Bulk Samples Analyzed for Asbestos Content by PLM, Building M-2			
Sample I.D.	Sample Location	Sample Description	Asbestos Content and Type
26477-M2-01A	Room 133, upper ceiling	Ceiling Plaster	None Detected
26477-M2-01B	Room 124, ceiling		None Detected
26477-M2-01C	Room 147, bulkhead		None Detected
26477-M2-02A	Room 133, floor	Vinyl Floor Tile Mastic	1.95% Chrysotile
26477-M2-02B			Not Analysed
26477-M2-02C			Not Analysed
26477-M2-03A	Room 133, floor	Leveling Compound	1% Chrysotile
26477-M2-03B			Not Analysed
26477-M2-03C			Not Analysed
26477-M2-04A	Room 133, wall	Drywall Joint Compound	None Detected
26477-M2-04B			None Detected
26477-M2-04C			None Detected
26477-M2-05A	Area on Basement Level directly below Room 133	Cement Block & Mortar	None Detected
26477-M2-05B			None Detected
26477-M2-05C			None Detected
26477-M2-06A	Room 133, wall	Wall plaster	None Detected
26477-M2-06B			None Detected
26477-M2-06C			1% Tremolite
26477-M2-07A	Room 148, ceiling beams above ceiling tiles	Trowel-applied fireproofing	None Detected
26477-M2-07B			None Detected
26477-M2-07C			1% Tremolite
26477-M2-08A	Room 271, wall	Ceramic tile Adhesive	None Detected
26477-M2-08B			None Detected
26477-M2-08C			None Detected
26477-M2-09A	Room 271, wall	Wall plaster	None Detected
26477-M2-09B			None Detected
26477-M2-09C			None Detected

Table 1: Summary of Bulk Samples Analyzed for Asbestos Content by PLM, Building M-2			
Sample I.D.	Sample Location	Sample Description	Asbestos Content and Type
26477-M2-10A	Roof, directly above Rooms 238/253	Roofing materials - tar	None Detected
26477-M2-10B			None Detected
26477-M2-10C			None Detected
26477-M2-11A	Roof, directly above Rooms 238/253	Roofing materials - shingle	None Detected
26477-M2-11B			None Detected
26477-M2-11C			None Detected

**Note:** Bold items represent materials that contain regulated concentrations of asbestos (0.5% or more) as per O.Reg 278/05, as amended.

Based upon consultation with NRC, for the purposes of this project the ceiling/deck plasters within the M-2 project areas will be considered homogenous with wall plaster, and are assumed to contain 1% Tremolite asbestos.

Based on previous sampling results, visual observations and bulk sampling analytical results for samples collected by DST, the following materials are identified as containing regulated concentrations of asbestos. Findings have been split up according to each project area at Building M-2:

#### 5.1.1. Identified ACMs – M-2 Washroom 124 and Room 124A

- Non-friable (**Friable** when disturbed) wall plaster, containing 1% Tremolite asbestos (DST sample 26477-M2-06C). There is approximately 60 square metres of wall plaster in Room 124, and approximately 15 square metres in Room 124A.
- Non-friable (**Friable** when disturbed) ceiling plaster is considered homogenous with wall plaster, and is assumed to contain 1% Tremolite asbestos. There is approximately 20 square metres of ceiling plaster in Room 124, and approximately 5 square metres in Room 124A.
- Friable asbestos-containing pipe insulation and pipe fitting insulation (Aircell, Mag-block, Sweatwrap, Grey Cement Compound), containing 15-30% Chrysotile asbestos (previous consultant samples). There is approximately 20 linear metres of pipe insulation and pipe fitting insulation in the ceiling cavity above the drop plaster ceiling, in fair/poor condition.
- Friable asbestos-containing pipe insulation and pipe fitting insulation (Aircell, Mag-block, Sweatwrap, Grey Cement Compound), containing 15-30% Chrysotile asbestos (previous consultant samples) is assumed to be present within wall cavities associated with domestic water piping systems (i.e. sinks and toilets).
- Cast iron drain pipe joint caulking (suspect ACM.)

#### 5.1.2. Identified ACMs – M-2 Storage Room 133

- Non-friable remnant black floor tile mastic, containing 1.95% Chrysotile asbestos (DST sample 26477-M2-02A). There is approximately 30 square metres of mastic, applied to the floor in good condition.
- Non-friable floor levelling compound, containing 1% Chrysotile asbestos (DST sample 26477-M2-03A). There is approximately 20 square metres of compound, applied to the floor in good condition.

- Non-friable (**Friable** when disturbed) wall plaster, containing 1% Tremolite asbestos (DST sample 26477-M2-06C). There is approximately 100 square metres of wall plaster in Room 133 and the dumb waiter shaft.
- Non-friable (**Friable** when disturbed) upper ceiling/deck plaster is considered homogenous with wall plaster, and is assumed to contain 1% Tremolite asbestos. There is approximately 20 square metres of ceiling plaster in Room 133 and the dumb waiter shaft.
- Ceiling plaster debris, assumed to contain 1% Tremolite asbestos, is present on top of ceiling tiles and on top of the dumb waiter. There is less than one square metre of ceiling plaster debris on ceiling tiles in Room 133 and approximately 1 square metre of plaster debris in the dumb waiter shaft.
- Cast iron drain pipe joint caulking (suspect ACM.)

#### 5.1.3. Identified ACMs, M-2 Washroom 271

- Non-friable (**Friable** when disturbed) wall plaster, containing 1% Tremolite asbestos (DST sample 26477-M2-06C). There is approximately 50 square metres of wall plaster in Room 271 in good condition.
- Non-friable (**Friable** when disturbed) upper ceiling/deck plaster is considered homogenous with wall plaster, and is assumed to contain 1% Tremolite asbestos. There is approximately 20 square metres of ceiling plaster in Room 271 in good condition.
- Friable asbestos-containing pipe insulation and pipe fitting insulation (Aircell, Mag-block, Sweatwrap, Grey Cement Compound), containing 15-30% Chrysotile asbestos (previous consultant samples) is assumed to be present within wall cavities associated with domestic water piping systems (i.e. sinks and toilets).
- Remnant mastic pucks on wall within ceiling cavity (suspect ACM – inaccessible)
- Cast iron drain pipe joint caulking (suspect ACM.)

#### 5.1.4. Identified ACMs, M-2 Control Room and Offices, Rooms 147 and 148

- Non-friable (**Friable** when disturbed) wall plaster, containing 1% Tremolite asbestos (DST sample 26477-M2-06C). There is approximately 80 square metres of wall plaster in Room 147, and 80 square metres in Room 148.
- Friable trowel-applied fireproofing material, applied to ceiling beams above lay-in ceiling tiles, containing 1% Tremolite asbestos (DST sample 26477-M2-07C). There is approximately 30 square metres of fireproofing in the ceiling cavity of Room 148 in good condition.
- Friable asbestos-containing pipe insulation and pipe fitting insulation (Aircell, Mag-block, Sweatwrap, Grey Cement Compound), containing 15-30% Chrysotile asbestos (previous consultant samples). There is approximately 20 linear metres of pipe insulation and pipe fitting insulation and 4 pipe fittings on fiberglass insulation in good condition in the ceiling cavity above the suspended ceilings of Rooms 147 and 148.
- Friable asbestos-containing pipe insulation and pipe fitting insulation (Aircell, Mag-block, Sweatwrap, Grey Cement Compound), containing 15-30% Chrysotile asbestos (previous consultant samples) is assumed to be present within wall and bulkhead cavities associated with domestic water piping systems (i.e. sinks and toilets).
- Cast iron drain pipe joint caulking (suspect ACM.)

**5.1.5. Non-Asbestos-Containing Materials – all M-2 Project Areas**

Bulk sampling has confirmed that the following materials do not contain regulated concentrations of asbestos in the project areas of M-2:

- Drywall joint compound (DST Samples 26477-M2-04A-C);
- Cement and mortar (DST samples 26477-M2-05A-C) from the basement walls below Room 133;
- Ceramic tile adhesive (DST samples 26477-M2-08A-C);
- Roofing materials (DST samples 26477-M2-10A-C and 11A-C); and
- In-lay acoustic ceiling tiles (date codes post-date use of asbestos in these building materials.)

**5.2. Asbestos – Building M-59**

Based on a review of previous documentation as it pertains to the project areas, the following friable ACMs were historically identified by Oakhill Environmental:

- Aircell pipe insulation, containing 40% Chrysotile;
- Grey cement compound on pipe fittings, containing 60% Chrysotile;
- Magblock pipe insulation, containing 25% Chrysotile; and
- Exterior stucco finish, containing 2% Chrysotile.

Table 2 below presents the findings of bulk asbestos material samples collected by DST from Building M-59 project areas, based on visual observations at the time of the site survey:

Table 2: Summary of Bulk Samples Analyzed for Asbestos Content by PLM, Building M-59			
Sample I.D.	Sample Location	Sample Description	Asbestos Content and Type
26477-M59-01A	Washroom 115, ceiling	Ceiling Plaster	1% Chrysotile
26477-M59-01B	Washroom 104, ceiling		Not Analysed
26477-M59-01C	Washroom 271, ceiling		Not Analysed
26477-M59-02A	Washroom 115, wall	Ceramic tile Adhesive	None Detected
26477-M59-02B			None Detected
26477-M59-02C			None Detected
26477-M59-03A	Washroom 104, wall	Wall plaster	None Detected
26477-M59-03B			None Detected
26477-M59-03C			None Detected
26477-M59-04A	Washroom 104, floor	Vinyl sheet flooring and backing	None Detected
26477-M59-04B			None Detected
26477-M59-04C			None Detected
26477-M59-05A	Washroom 104, wall	Drywall joint compound	None Detected
26477-M59-05B			None Detected
26477-M59-05C			None Detected
26477-M59-06A	Washroom 104, ductwork	Grey cement compound	40% Chrysotile
26477-M59-06B			Not Analysed
26477-M59-06C			Not Analysed

Table 2: Summary of Bulk Samples Analyzed for Asbestos Content by PLM, Building M-59			
Sample I.D.	Sample Location	Sample Description	Asbestos Content and Type
26477-M59-07A	Washroom 104, floor	Vinyl sheet flooring mastic	None Detected
26477-M59-07B			None Detected
<b>26477-M59-07C</b>			<b>1% Tremolite</b>
26477-M59-08A	Washroom 128, wall	Ceramic tile Adhesive	None Detected
26477-M59-08B			None Detected
26477-M59-08C			None Detected

**Note:** Bold items represent materials that contain regulated concentrations of asbestos (0.5% or more) as per O.Reg 278/05, as amended.

Based upon consultation with NRC, for the purposes of this project the wall plasters within the project areas of M-59 will be considered homogenous with ceiling plaster, and are assumed to contain 1% Chrysotile asbestos.

Based on previous sampling results, visual observations and bulk sampling analytical results for samples collected by DST, the following materials are identified as containing regulated concentrations of asbestos. Findings have been split up according to each project area at Building M-59:

#### 5.2.1. Identified ACMs – M-59 Washroom 104

- Non-friable (**Friable** when disturbed) wall plaster, considered homogenous with ceiling plaster, containing 1% Chrysotile asbestos (DST sample 26477-M59-01A). There is approximately 20 square metres of good condition wall plaster in Room 104.
- Non-friable (**Friable** when disturbed) ceiling plaster, containing 1% Chrysotile asbestos (DST sample 26477-M59-01A). There is approximately 10 square metres of good condition ceiling plaster in Room 104 above suspended ceiling tiles.
- Friable asbestos-containing pipe insulation and pipe fitting insulation (Aircell, Mag-block, Sweatwrap, Grey Cement Compound), containing 20-60% Chrysotile asbestos (previous consultant samples) is assumed to be present within wall cavities associated with domestic water piping systems (i.e. sinks and toilets).
- Friable grey cement compound (GCC) on ductwork, containing 40% Chrysotile asbestos (DST sample 26477-M59-06A). A quantity of this ACM could not be documented as the majority is located above an inaccessible solid plaster ceiling.
- Cast iron drain pipe joint caulking (suspect ACM.)

#### 5.2.2. Identified ACMs – M-59 Washroom 115

- Non-friable (**Friable** when disturbed) wall plaster, considered homogenous with ceiling plaster, containing 1% Chrysotile asbestos (DST sample 26477-M59-01A). There is approximately 45 square metres of wall plaster in Room 115.
- Non-friable (**Friable** when disturbed) ceiling plaster, containing 1% Chrysotile asbestos (DST sample 26477-M59-01A). There is approximately 12 square metres of ceiling plaster in Room 115.
- Friable asbestos-containing pipe insulation and pipe fitting insulation (Aircell, Mag-block, Sweatwrap, Grey Cement Compound), containing 20-60% Chrysotile asbestos (previous consultant samples). There is approximately 20 linear metres of pipe insulation and pipe

fitting insulation in the ceiling cavity above the drop plaster ceiling, in fair/poor condition. In addition there is approximately 1 square metres of poor condition debris (asbestos containing pipe insulation and pipe fitting insulation) scattered above the plaster drop ceiling.

- Friable asbestos-containing pipe insulation and pipe fitting insulation (Aircell, Mag-block, Sweatwrap, Grey Cement Compound), containing 20-60% Chrysotile asbestos (previous consultant samples) is assumed to be present within wall cavities associated with domestic water piping systems (i.e. sinks and toilets).
- Cast iron drain pipe joint caulking (suspect ACM.)

### 5.2.3. Identified ACMs, M-59 Washrooms 128 and 129

- Non-friable (**Friable** when disturbed) wall plaster, considered homogenous with ceiling plaster, containing 1% Chrysotile asbestos (DST sample 26477-M59-01A). There is approximately 45 square metres of wall plaster in Room 128, and approximately 20 square metres in Room 129.
- Non-friable (**Friable** when disturbed) ceiling plaster, containing 1% Chrysotile asbestos (DST sample 26477-M59-01A). There is approximately 15 square metres of ceiling plaster in Room 128, and approximately 10 square metres in Room 129.
- Friable asbestos-containing pipe insulation and pipe fitting insulation (Aircell, Mag-block, Sweatwrap, Grey Cement Compound), containing 20-60% Chrysotile asbestos (previous consultant samples). There is approximately 40 linear metres of pipe insulation and pipe fitting insulation in the ceiling cavity above the drop plaster ceiling, in fair/poor condition. In addition there is approximately 1 square metres of poor condition debris (asbestos containing pipe insulation and pipe fitting insulation) scattered above the plaster drop ceiling.
- Cast iron drain pipe joint caulking (suspect ACM.)
- Non-friable stucco on the exterior outer face of the perimeter walls of the washrooms containing 2% Chrysotile asbestos (previous consultant samples).

### 5.2.4. Non-Asbestos-Containing Materials – all M-59 Project Areas

Bulk sampling has confirmed that the following materials do not contain regulated concentrations of asbestos in the project area:

- Ceramic tile adhesive (DST Samples 26477-M59-02A-C);
- Vinyl sheet flooring (DST samples 26477-M59-04A-C);
- Drywall joint compound (DST samples 26477-M59-05A-C);
- Vinyl sheet flooring mastic (DST samples 26477-M59-07A-C);
- Ceramic tile adhesive (DST Samples 26477-M59-08A-C); and
- In-lay acoustic ceiling tiles (date codes post-date use of asbestos in these building materials.)

## 5.3. Lead

### 5.3.1. Building M-2

Table 3 summarises the analytical results of paint chip samples and ceramic tile glazing samples collected from the project areas:

Table 3: Lead Content Analysis by ICP-IES, Building M-2			
Sample ID	Description	Sample Location	Lead Content
<b>26477-M2-LP01</b>	<b>Off White</b>	<b>Room 133, walls and Ceilings</b>	<b>2,430 ppm</b>
<b>26477-M2-LP02</b>	<b>Off white/green</b>	<b>Room 124, radiator</b>	<b>11,500 ppm</b>
26477-M2-LP03	Beige	Room 271, Ceiling	351 ppm
<b>26477-M2-LP04</b>	<b>Grey</b>	<b>Basement (below Room 133) floor paint</b>	<b>1,970 ppm</b>
<b>26477-M2-Pb03</b>	<b>Glazing</b>	<b>Room 124, ceramic tile</b>	<b>7.1 mg/cm<sup>2</sup></b>

Note: Bold items represent paints or surface coatings that are considered to be lead-containing

Based on the analytical paint chip and glazing sampling results presented above, all of the paints sampled contain detectable amounts of lead. However, the beige paint similar to that present on the ceiling of Room 271 is not considered to be "lead containing".

No further paint samples were collected by DST for lead content analysis during the site investigation, as other paints encountered in the project area were in good condition and sampling without matrix interference (i.e. removing the paint without the substrate material) would have proved difficult. As such, all paint finishes that have not been sampled are assumed to be lead containing.

Lead is suspected to be present in the following materials:

- Solder on the joints of copper pipes;
- Ceramic tile glazing;
- Lead spacers associated with Terrazzo; and
- Cast iron drain pipe joint caulking

### 5.3.2. Building M-59

Table 4 summarises the analytical results of paint chip samples and ceramic tile glazing samples collected from the project areas:

Table 4: Lead Content Analysis by ICP-IES, Building M-59			
Sample ID	Description	Sample Location	Lead Content
<b>26477-M59-LP01</b>	<b>Off White</b>	<b>Room 115, walls and ceilings</b>	<b>1,660 ppm</b>
<b>26477-M59-LP02</b>	<b>Pink</b>	<b>Room 104, walls</b>	<b>1,340 ppm</b>
<b>26477-M59-LP03</b>	<b>Green/Brown</b>	<b>Room 128 Door frame</b>	<b>5,540 ppm</b>
26477-M59-LP04	Beige	Room 128 walls and ceilings	375 ppm
<b>26477-M59-Pb01</b>	<b>Glazing</b>	<b>Room 115, ceramic tile</b>	<b>5.3 mg/cm<sup>2</sup></b>

Table 4: Lead Content Analysis by ICP-IES, Building M-59			
Sample ID	Description	Sample Location	Lead Content
<b>26477-M59-Pb02</b>	<b>Glazing</b>	<b>Room 128, ceramic tile</b>	<b>5.3 mg/cm<sup>2</sup></b>

Note: **Bold** items represent paints or surface coatings that are considered to be lead-containing

Based on the analytical paint chip and glazing sampling results presented above, all of the paints sampled contain detectable amounts of lead. However, the beige paint similar to that present on the walls and ceiling of Room 128 is not considered to be "lead containing".

No further paint samples were collected by DST for lead content analysis during the site investigation, as other paints encountered in the project area were in good condition and sampling without matrix interference (i.e. removing the paint without the substrate material) would have proved difficult. As such, all older interior wall and ceiling paint finishes are suspected to contain lead.

Lead is suspected to be present in the following materials:

- Solder on the joints of copper piping;
- Ceramic tile glazing;
- Lead spacers associated with Terrazzo; and
- Cast iron drain pipe joint caulking

#### 5.4. Mercury

Mercury is assumed to be present in the following equipment within the project areas of both M-2 and M-59:

- Fluorescent light fixtures containing fluorescent light tubes were observed. Fluorescent light tubes contain mercury in a vapour form and in the phosphor coating on the lamp tube;

#### 5.5. Silica

Based on the historical composition of building materials, silica is expected to be present within the project areas of both M-2 and M-59 in:

- Lay-in ceiling tiles;
- Drywall;
- Terracotta brick and mortar;
- Plaster;
- Ceramic tiles, mortars, and grout;
- Brick and mortar; and
- Concrete materials.

#### 5.6. Polychlorinated Biphenyls (PCBs)

Polychlorinated Biphenyls (PCBs) are hazardous chemicals which were used in the manufacturing of a variety of equipment, such as electrical equipment, heat exchangers, hydraulic systems, and for several other specialized applications. PCBs are commonly found within

electrical ballasts manufactured prior to 1981, found within fluorescent light fixtures and high intensity discharge lamps.

Light fixtures with T12 lamps are more likely to contain ballasts that were manufactured prior to 1981. T8 lamps are associated with light fixtures that were manufactured after the phase-out of PCB-containing ballasts. The letter "T" denotes the shape of the light fixture (e.g. tubular) and the number which follows indicates the diameter in eighths of an inch.

DST did not disassemble light fixtures in the project areas of M-2 and M-59. Based on limited visual observations, select fluorescent light fixtures that contain T12 lamps were noted in several areas, which are suspected to contain PCB-containing ballasts.

### 5.7. Other Designated Substances and Hazardous Materials

The following Designated Substances and Hazardous Materials were neither observed, nor suspected of being present, in forms or quantities that would impact the renovation work:

- Acrylonitrile;
- Arsenic;
- Benzene;
- Coke Oven Emissions;
- Ethylene Oxide;
- Isocyanates;
- Ozone-depleting substances;
- Vinyl Chloride; and
- Mould

## 6.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the site investigation, sampling and analysis, the following Designated Substances are present in forms and quantities expected to have a measurable impact on the M-2 and M-59 Washrooms Renovation Project:

- Asbestos;
- Lead;
- Mercury;
- Silica; and
- PCBs.

DST's recommendations for each material, which are based upon both regulatory compliance and best practice guidelines, are included in the following sections below.

### 6.1. Asbestos

The disturbance of asbestos-containing materials on construction and demolition projects in the province of Ontario is governed by *O. Reg. 278/05, Asbestos on Construction Projects and in Buildings and Repair Operations* enabled under the *Occupational Health and Safety Act (R.S.O. 1990, Chapter 0.1)*, as amended. This regulation classifies all asbestos disturbances as either Low Risk (Type 1), Moderate Risk (Type 2), or High Risk (Type 3), each of which has defined precautionary measures. All asbestos materials are subject to specific handling and disposal

precautions, and must be removed prior to demolition or renovation. The Ontario Ministry of Labour (MOL) must be notified of any project involving removal of more than a minor amount (e.g. typically one square metre) of friable asbestos material.

The removal or disturbance of 1 square metre or less of friable asbestos-containing material must be conducted using a minimum of Type 2 asbestos precautionary measures. The removal or disturbance of greater than 1 square metre of friable ACMs must be conducted using Type 3 asbestos precautionary measures. It should be noted that:

- Plaster materials are considered non-friable in their undisturbed state, but typically become friable when disturbed. As such, plaster materials should be treated as friable ACM;
- Friable asbestos-containing debris has been identified on select upper ceiling surfaces. Entry to these areas will require a minimum of Type 2 precautions.
- Pipe fitting insulation can be removed using Type 2 glove bag procedures, provided the pipe fittings are in good condition, and the work is performed in accordance with the requirements of O.Reg 278/05, as amended. Note that a proper seal must be maintained and that glove bag procedures cannot be used for conditions that prevent a seal from being maintained (e.g. hot pipes, physical geometry).

The removal or disturbance of non-friable asbestos-containing materials (mastics and floor levelling compounds) can be completed using Type 1 asbestos precautionary measures, provided the material is wetted and only non-powered hand-held tools are used. If these conditions cannot be met, then more stringent (Type 2 or Type 3) procedures are required.

The time weight average exposure limit (TWAE) for airborne asbestos is prescribed by Ontario Regulation 490/09 *Designated Substances*, as amended. Work procedures and personal protective equipment must be used to ensure that workers are not exposed to airborne asbestos levels that exceed this TWAE.

The following recommendations apply to ACMs:

1. In general, materials must be maintained in good condition;
2. The condition of material(s) identified in this report must be inspected at least annually, and this record must be updated accordingly;
3. Appropriate work procedures and precautionary measures must be used, as outlined in O. Reg. 278/05, as amended, when performing work that may disturb ACMs or suspected ACMs, including prior to building demolition;
4. If ACMs or suspected ACMs become damaged and worker exposure to the material is likely to occur, the damaged material must be repaired or removed following work procedures outlined in O. Reg. 278/05, as amended; and
5. Disposal of asbestos waste is controlled by the Ontario Environmental Protection Act, R.R.O., 1990, Regulation 347, *General – Waste Management*, as amended. This regulation requires that asbestos waste be sealed in double containers resistant to puncture and tears, and appropriately labelled. The waste must be disposed at a licensed waste disposal site. Proper notification must be issued to the site representative prior to transportation of waste. The transport of the waste to the disposal site is controlled by the federal *Transportation of Dangerous Goods Act, 1992 (TDGA)*.

Although attempts were made to look above ceilings and into wall cavities, some ACMs may be concealed and thus not observed at the time of the survey. Should any previously unidentified suspect ACMs be encountered as part of future work, these materials are to be treated as ACMs and handled accordingly, unless sampling proves otherwise.

Materials that have not been analyzed, but are visibly similar to other materials identified as asbestos-containing, must be considered asbestos-containing unless proven otherwise by laboratory analysis.

## 6.2. Lead

The Occupational Health and Safety Branch of the Ontario MoL has published *Guideline: Lead on Construction Projects*. This document classifies all lead disturbances as Type 1, Type 2a, Type 2b, Type 3a or Type 3b work, and assigns different levels of respiratory protection and work procedures for each classification. In the absence of specific legislation for lead on construction projects, this guideline should be followed when disturbing lead-containing materials.

Paints containing elevated concentrations of lead can pose a health risk to humans if ingested or inhaled. Such lead paints are also a risk to the environment with the potential to contaminate soil and groundwater. Paints with elevated lead content can also pose a health risk to workers while completing renovations within the building.

Lead-containing materials including paints having lead concentrations greater than 1,000 ppm require lead abatement precautionary measures. Work procedures outlined in the MoL document entitled *Guideline: Lead on Construction Projects* should be followed to reduce the exposure to lead when disturbing materials coated with these paints.

Paints having lead concentrations less than 1,000 ppm are not considered to be lead-containing but require lead abatement precautionary measures if these paints are disturbed in an aggressive manner (e.g. torching/welding, grinding, power sanding, or abrasive blasting).

The TWael for airborne lead is prescribed by Ontario Regulation 490/09 *Designated Substances*, as amended. Work procedures and personal protective equipment must be used to ensure that workers are not exposed to airborne lead levels that exceed this TWael.

DST recommends that any future disturbance of lead-containing materials avoid operations that generate high levels of dust (e.g. sanding, grinding) and that should these operations be required, appropriate precautionary measures be implemented for worker exposure.

The disposal of construction waste containing lead is governed by O. Reg. 347/90 - General - Waste Management, as amended. The transport of the waste to the disposal site is controlled by the federal Transportation of Dangerous Goods Act (TDGA), 1992.

If required at some future date to accommodate work, the following procedures are appropriate for other materials containing lead:

- Copper piping and cast iron joint caulking can be cut a small distance (e.g. 50 mm) from the joints to avoid direct disturbance of suspected lead solder and caulking; and

- Ceramic tiles can be removed using Type 1 work procedures and respiratory protection provided that only non-powered hand tools are used.

### **6.3. Mercury**

There are no regulations that specifically govern the disturbance of mercury on construction projects. However, the Occupational Health and Safety Division of the Ontario MoL has published *The Safe Handling of Mercury: A Guide for the Construction Industry*. This document provides advice on how to reduce the risk of mercury exposure, and outlines clean-up methods for spills. In the absence of specific legislation for mercury on construction projects, this guideline would serve as a reasonable, peer reviewed standard for work procedures.

When the removal of fluorescent light tubes is required, the tubes should be removed intact from the fixtures. This prevents worker exposure to mercury vapour, particularly if the tube was energized shortly before removal. Thermostats containing liquid mercury can be removed in the same fashion.

The TWael for mercury is prescribed by Ontario Regulation 490/09 *Designated Substances*, as amended. Work procedures and personal protective equipment must be used to ensure that workers are not exposed to airborne mercury levels that exceed this exposure limit.

Liquid mercury is classified as a hazardous waste under O. Reg. 347/90, as amended. The transport of the waste to a disposal site is controlled by O. Reg. 347/90 and by the federal TDGA. It is now common practice to recycle fluorescent light tubes and avoiding the generation of hazardous waste.

### **6.4. Silica**

The Occupational Health and Safety Branch of the Ontario Ministry of Labour have published *Guideline: Silica on Construction Projects*. This document classifies all silica disturbances as Type 1, Type 2 or Type 3 work, and assigns different levels of respiratory protection and work procedures for each classification.

The TWael for airborne silica is prescribed by Ontario Regulation 490/09 *Designated Substances*, as amended. Work procedures and personal protective equipment must be used to ensure that workers are not exposed to airborne silica levels that exceed this exposure limit.

As a general rule, it is preferable to use more stringent dust suppression techniques and engineering controls as opposed to relying on respiratory protection to control worker exposure. Respiratory protection should only be relied on as a last resort when dust suppression techniques and engineering controls fail to control worker.

### **6.5. Polychlorinated Biphenyls (PCBs)**

Fluorescent light ballasts that may be encountered in the M-2 and M-59 project areas are suspected to contain PCBs. Prior to removal or disposal, the PCB content of equipment must be confirmed to determine proper procedures to be followed. When the light fixtures are taken out of service, the ballasts should be examined to determine whether they contain PCBs. This can be done by comparing the manufacturer date codes stamped on the ballasts to information contained in the document titled Identification of Lamp Ballasts Containing PCBs, published by Environment

Canada. Ballasts that contain PCBs must be packaged, transported and disposed of in accordance with all appropriate provincial and federal regulations.

O. Reg. 347, General – Waste Management, as amended, is regulated under the Environmental Protection Act to regulate the handling, storage and transportation of hazardous substances and waste dangerous goods. The transport of PCB waste to the disposal site is controlled by the federal Transportation of Dangerous Goods Act, 1992. Proper notification must be issued to the site representative prior to transportation of waste. Use, storage, labelling, and reporting requirements are also outlined within the federal PCB Regulation under the Canadian Environmental Protection Act (CEPA).

## 7.0 CLOSURE

A Limitations of Report section, which forms an integral part of this report, is attached.

We trust that the information contained herein meets your needs. Should you have any questions or comments, please do not hesitate to contact us.

## LIMITATIONS OF REPORT

This report is intended for client use only. Any use of this document by a third party, or any reliance on or decisions made based on the findings described in this report, are the sole responsibility of such third parties, and DST Consulting Engineers Inc. accepts no responsibility for damages, suffered by any third party as a result of decisions made or actions conducted based on this report. No other warranties are implied or expressed.

The data, conclusions and recommendations which are presented in this report, and the quality thereof, are based on a scope of work authorized by the client. The sampling program included asbestos bulk sampling and lead chip/bulk sampling in select representative areas for laboratory analysis. There is a practical limitation on the number of intrusive test cuts that can be made and the number of samples that can be collected in an occupied building. This requires the investigator to extrapolate observations and analytical results between test cut locations. The uncertainty, and inherent risk, associated with this necessity increases with the distance between sampling locations. Note, however, that no scope of work, no matter how exhaustive, can guarantee to identify all contaminants. This report therefore cannot warranty that all building conditions are represented by those identified at specific locations.

Recommendations, when included, are made in good faith and are based on several successful experiences.

Any recommendations and conclusions provided that are based on conditions or assumptions reported herein will inherently include any uncertainty associated with those conditions or assumptions.

Note also that standards, guidelines and practices related to environmental investigations may change with time. Those which were applied at the time of this investigation may be obsolete or unacceptable at a later date.

Any comments given in this report on potential remediation problems and possible methods are intended only for the guidance of the designer. The scope of work may not be sufficient to determine all of the factors that may affect construction, clean-up methods and/or costs. Contractors bidding on this project or undertaking clean-ups should, therefore, make their own interpretation of the factual information presented and draw their own conclusions as to how the conditions may affect their work.

Any results from an analytical laboratory or other subcontractor reported herein have been carried out by others, and DST Consulting Engineers Inc. cannot warranty their accuracy. Similarly, DST cannot warranty the accuracy of information supplied by the client.

### Analysis Summary Table

Analysis	Method Reference/Description	Lab Location	NVLAP Lab Code *	Analysis Date
Asbestos, PLM Visual Estimation	by EPA 600/R-93/116	Ottawa West Lab	200812-0	3-Jun-16

\* Reference to the NVLAP term does not permit the user of this report to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the Federal Government.

### Qualifier Notes

Sample Qualifiers :

ASLYR: Layers were noted for this sample, however, the entire sample was homogenized per client request.

AS-PRE: Due to the difficult nature of the bulk sample (interfering fibers/binders), additional NOB preparation was required prior to analysis

### Work Order Revisions / Comments

None

FIGURE

**MP1 Montant à payer – Généralités**

1.1 Sous réserve de toutes autres dispositions du Contrat, Sa Majesté paie à l'Entrepreneur, aux dates et de la manière énoncées ci-après, le montant par lequel:

1.1.1 l'ensemble des montants prévus à l'article MP2 excède,

1.1.2 l'ensemble des montants prévus à l'article MP3

et l'Entrepreneur accepte le paiement comme paiement final de tout ce qu'il a fourni et fait relativement aux travaux auxquels le paiement se rapporte.

**MP2 Montants payables à l'Entrepreneur**

2.1 Les montants mentionnés à l'alinéa MP1.1.1 sont l'ensemble :

2.1.1 des montants prévus dans les Articles de convention; et

2.1.2 le montant, s'il en est, payable à l'Entrepreneur conformément aux Conditions générales.

**MP3 Montants payables à Sa Majesté**

3.1 Les montants mentionnés à l'alinéa MP1.1.2 sont l'ensemble des montants, s'il en est, que l'Entrepreneur est tenu de payer à Sa Majesté en vertu du Contrat.

3.2 Dans tout paiement fait à l'Entrepreneur, le fait pour Sa Majesté d'omettre de déduire d'un montant mentionné à l'article MP2 un montant mentionné au paragraphe MP3.1 ne peut constituer un abandon de son droit de faire une telle déduction, ni une reconnaissance de l'absence d'un tel droit lors de tout paiement ultérieur à l'Entrepreneur.

**MP4 Date de paiement**

4.1 Dans les présentes modalités de paiement :

4.1.1 «période de paiement» signifie un intervalle de 30 jours consécutifs ou tout autre intervalle plus long convenu entre l'Entrepreneur et le représentant ministériel;

4.1.2 un montant est «dû et payable» lorsqu'il doit être versé à l'Entrepreneur par Sa Majesté selon les paragraphes MP4.4, MP4.7 ou MP4.10;

4.1.3 un montant est en souffrance lorsqu'il demeure impayé le premier jour suivant le jour où il est dû et payable;

4.1.4 «date de paiement» signifie la date du titre négociable d'un montant dû et payable par le Receveur général du Canada et émis aux fins de paiement;

4.1.5 «taux d'escompte» signifie le taux d'intérêt, fixé par la Banque du Canada, en vigueur à l'ouverture des bureaux à la date de paiement.

4.2 À l'expiration d'une période de paiement, l'Entrepreneur doit remettre au représentant ministériel

une demande d'acompte par écrit et y décrire toute partie achevée des travaux et tous les matériaux livrés aux lieux des travaux, mais non incorporés aux travaux, durant la période de paiement faisant l'objet de la demande d'acompte.

- 4.3 Le représentant ministériel, dans les dix jours suivant réception d'une demande d'acompte mentionnée au paragraphe MP4.2 :
- 4.3.1 fait l'inspection de la partie des travaux et des matériaux qui y sont décrits, et
  - 4.3.2 présente un rapport sur le progrès des travaux, dont le représentant ministériel envoie une copie à l'Entrepreneur, indiquant la valeur de la partie des travaux et des matériaux décrits dans la demande d'acompte que, selon le représentant ministériel :
    - 4.3.2.1 sont conformes aux dispositions du Contrat, et
    - 4.3.2.2 n'étaient visés par aucun autre rapport concernant des travaux du Contrat.
- 4.4 Sous réserve de l'article MP1 et du paragraphe MP4.5, Sa Majesté, au plus tard 30 heures après la réception par le représentant ministériel de la demande d'acompte mentionnée au paragraphe MP4.2, paie à l'Entrepreneur :
- 4.4.1 une somme égale à 95% de la valeur indiquée dans le rapport sur le progrès des travaux mentionné à l'alinéa MP4.3.2, si l'Entrepreneur a fourni un cautionnement pour le paiement de la main-d'œuvre et des matériaux, ou
  - 4.4.2 un montant égal à 90% de la valeur indiquée dans le rapport sur le progrès des travaux mentionné à l'alinéa 4.3.2, si l'Entrepreneur n'a pas fourni un cautionnement pour le paiement de la main-d'œuvre et des matériaux.
- 4.5 Il est essentiel, pour que Sa Majesté s'acquitte de son obligation mentionnée au paragraphe MP4.4, que l'Entrepreneur fasse et remette au représentant ministériel,
- 4.5.1 une déclaration conforme à celle décrite au paragraphe MP4.6, pour les travaux et matériaux visés dans la demande d'acompte prévue au paragraphe MP4.2,
  - 4.5.2 dans le cas de la première demande d'acompte de l'Entrepreneur, un calendrier d'exécution conformément aux parties pertinentes des Devis, et
  - 4.5.3 si un calendrier est exigé, sa mise à jour aux moments précisés dans les parties pertinentes des Devis.
- 4.6 Dans la déclaration mentionnée au paragraphe MP4.5, l'Entrepreneur atteste :
- 4.6.1 qu'au jour de la demande d'acompte de l'Entrepreneur, l'Entrepreneur s'est acquitté de toutes ses obligations légales aux termes des Conditions de travail, et
  - 4.6.2 qu'au jour de la précédente demande d'acompte, l'Entrepreneur s'est acquitté de toutes ses obligations légales envers ses sous-entrepreneurs et ses fournisseurs de matériaux en ce qui concerne les travaux visés par le Contrat.

- 4.7 Sous réserve de l'article MP1 et du paragraphe MP4.8, Sa Majesté verse à l'Entrepreneur, dans les 30 jours suivant la date de délivrance du Certificat provisoire d'achèvement mentionné au paragraphe CG44.2, la somme mentionnée à l'article MP1, moins l'ensemble :
- 4.7.1 de tous les paiements effectués conformément au paragraphe MP4.4;
  - 4.7.2 du montant égal au coût pour Sa Majesté, estimé par le représentant ministériel de la correction de toutes déficiences dans les travaux et décrites dans le Certificat provisoire d'achèvement; et
  - 4.7.3 du montant égal au coût pour Sa Majesté, estimé par le représentant ministériel de l'achèvement de toute partie des travaux décrite dans le Certificat provisoire d'achèvement ne comportant pas la correction des déficiences visées par l'alinéa MP4.7.2.
- 4.8 Il est essentiel, pour que Sa Majesté s'acquitte de son obligation mentionnée au paragraphe MP4.7, que l'Entrepreneur fasse et remette au représentant ministériel,
- 4.8.1 une déclaration conforme à celle décrite au paragraphe MP4.9 relativement au Certificat provisoire d'achèvement mentionné au paragraphe CG44.2, et
  - 4.8.2 s'il est précisé dans les parties pertinentes des Devis, une mise à jour du calendrier d'exécution mentionné à l'alinéa MP4.5.2 qui, en plus des exigences énoncées, soit suffisamment détaillé concernant l'achèvement des travaux non-terminés et la correction de tous les défauts, le tout à la satisfaction du représentant ministériel.
- 4.9 Dans la déclaration mentionnée au paragraphe MP4.8, l'Entrepreneur atteste qu'au jour de l'émission du Certificat provisoire d'achèvement :
- 4.9.1 l'Entrepreneur s'est acquitté de toutes ses obligations légales aux termes des Conditions de travail;
  - 4.9.2 l'Entrepreneur s'est acquitté de toutes ses obligations légales envers ses sous-entrepreneurs et ses fournisseurs de matériaux en ce que concerne les travaux visés par le Contrat; et
  - 4.9.3 l'Entrepreneur s'est acquitté de toutes ses obligations mentionnées au paragraphe CG14.6.
- 4.10 Sous réserve de l'article MP1 et du paragraphe MP4.11, Sa Majesté verse à l'Entrepreneur, dans les 60 jours suivant la date de délivrance du Certificat définitif d'achèvement mentionné au paragraphe CG44.1, la somme mentionnée à l'article MP1, moins l'ensemble :
- 4.10.1 de tous les paiements effectués conformément au paragraphe MP4.4, et
  - 4.10.2 de tous les paiements effectués conformément au paragraphe MP4.7.
- 4.11 Il est essentiel, pour que Sa Majesté s'acquitte de son obligation mentionnée au paragraphe MP4.10, que l'Entrepreneur fasse et remette au représentant ministériel une déclaration conforme

à celle décrite au paragraphe MP4.12.

- 4.12 Dans la déclaration mentionnée au paragraphe MP4.11, l'Entrepreneur atteste, outre les mentions requises en vertu du paragraphe MP4.9, que l'Entrepreneur s'est acquitté de toutes ses obligations légales et qu'il a satisfait à toutes les réclamations légales formulées contre lui par suite de l'exécution des travaux.

**MP5 Le rapport sur le progrès des travaux et le paiement y afférent ne lient pas Sa Majesté**

- 5.1 Ni le rapport sur le progrès des travaux mentionné au paragraphe MP4.3, ni les paiements effectués par Sa Majesté en conformité des Modalités ne doivent être interprétés comme une admission que les travaux et les matériaux sont, en totalité ou en partie, complets, satisfaisants ou conformes au Contrat.

**MP6 Retard du paiement**

- 6.1 Nonobstant l'article CG7, le retard apporté par Sa Majesté à faire un paiement à sa date d'exigibilité en vertu du présent Contrat, ne constitue pas un bris du Contrat.
- 6.2 Sa Majesté versera, sans que l'Entrepreneur le demande, des intérêts simples au taux d'escompte plus 1 ¼ p. 100 sur les montants en souffrance en vertu de l'alinéa MP4.1.3, intérêts qui s'appliquent à compter du premier jour de retard jusqu'au jour précédant la date de paiement, sauf que
- 6.2.1 les intérêts se seront ni exigibles ni versés à moins que le montant dont il est question au paragraphe MP6.2 ait été en souffrance pendant plus de 15 jours suivant :
- 6.2.1.1 la date à laquelle ladite somme est devenue due et payable, ou
- 6.2.1.2 la date de réception par le représentant ministériel de la déclaration conforme à celle décrite aux paragraphes MP4.5, MP4.8 ou MP4.11;
- selon la plus avancée de ces deux dates, et
- 6.2.2 les intérêts ne seront ni exigibles ni versés sur les paiements anticipés en souffrance, le cas échéant.

**MP7 Droit de compensation**

- 7.1 Sans restreindre tout droit de compensation ou de retenue découlant explicitement ou implicitement de la loi ou d'une disposition quelconque du Contrat, Sa Majesté peut opérer compensation de toute somme due par l'Entrepreneur à Sa Majesté en vertu du Contrat ou de tout contrat en cours, à l'encontre des sommes dues par Sa Majesté à l'Entrepreneur en vertu du Contrat.
- 7.2 Pour les fins du paragraphe MP7.1, l'expression «contrat en cours» signifie un contrat entre Sa Majesté et l'Entrepreneur :
- 7.2.1 en vertu duquel l'Entrepreneur est légalement obligé d'exécuter ou de fournir du travail,

de la main-œuvre ou des matériaux; ou

- 7.2.2 à l'égard duquel Sa Majesté a, depuis la date à laquelle les présents Articles de convention sont intervenus, exercé le droit de retirer à l'Entrepreneur les travaux faisant l'objet du contrat.

**MP8 Paiement en cas de résiliation**

- 8.1 En cas de résiliation du Contrat conformément à l'article CG41, Sa Majesté paie à l'Entrepreneur le plus tôt possible eu égard aux circonstances, tout montant qui lui est légalement dû et payable.

**MP9 Intérêts sur les réclamations réglées**

- 9.1 Sa Majesté versera à l'Entrepreneur des intérêts simples sur le montant d'une réclamation réglée, au taux d'escompte moyen plus q  $\frac{1}{4}$  p. 100 à compter du premier jour de retard jusqu'au jour précédant la date de paiement.
- 9.2 Aux fins du paragraphe MP9.1:
- 9.2.1 une réclamation est réputée être réglée lorsqu'une entente par écrit est signée par le représentant ministériel et l'Entrepreneur et fait état du montant de la réclamation à verser par Sa Majesté et des travaux pour lesquels ledit montant doit être versé;
- 9.2.2 le «taux d'escompte moyen» signifie le taux d'intérêt moyen, fixé par la Banque du Canada, en vigueur à la fin de chaque mois civil au cours de la période pendant laquelle la réclamation réglée était impayée;
- 9.2.3 une réclamation réglée est réputée être impayée à compter de la journée qui suit immédiatement la date à laquelle la réclamation était due et payable conformément au Contrat, s'il n'y avait pas eu contestation.
- 9.3 Aux fins de l'Article MP9, une réclamation signifie tout montant faisant l'objet d'un litige et assujéti à des négociations entre Sa Majesté et l'Entrepreneur en vertu du Contrat.

## **CG1 Interpretation**

### 1.1 Dans le Contrat:

- 1.1.1 tout renvoi à une autre partie du Contrat désignée par des numéros précédés de lettres est censé renvoyer à la partie du Contrat qui est désignée par cette combinaison de lettres et de chiffres, de même qu'à toute autre partie du Contrat qui y est mentionnée ;
- 1.1.2 « Contrat » signifie les documents mentionnés dans les Articles de convention;
- 1.1.3 « garantie du contrat » signifie toute garantie fournie à Sa Majesté par l'Entrepreneur conformément au Contrat;
- 1.1.4 « le représentant ministériel » signifie l'officier ou l'employé de Sa Majesté désigné aux Articles de convention et toute personne autorisée spécialement par le représentant ministériel à accomplir, en son nom, n'importe laquelle des fonctions qui lui sont confiées en vertu du Contrat, et signalée comme tel par écrit à l'Entrepreneur;
- 1.1.5 « matériaux » comprend toutes les marchandises, articles et choses à être fournies par ou pour l'Entrepreneur en vertu du Contrat, pour être incorporés dans les travaux;
- 1.1.6 « Ministre » comprend une personne agissant pour ou, si la charge est sans titulaire, à la place du Ministre ou des personnes lui succédant, de même que son ou leurs adjoints ou représentants dûment nommés aux fins du Contrat;
- 1.1.7 « personne » comprend, sauf lorsque le contexte exige une interprétation différente, une société, une entreprise, une firme, une co-entreprise, un consortium et une corporation;
- 1.1.8 « outillage » comprend les animaux, outils, instruments, machines, véhicules, bâtiments, ouvrages, équipements et marchandises, articles et choses autres que les matériaux, qui sont nécessaires à l'exécution des travaux;
- 1.1.9 « sous-entrepreneur » signifie une personne à qui l'Entrepreneur a, conformément à l'article CG4, confié l'exécution des travaux en tout ou en partie;
- 1.1.10 « surintendant » signifie l'employé de l'Entrepreneur désigné par ce dernier pour remplir les fonctions décrites à l'article CG19;
- 1.1.11 « travaux » comprend, sous réserve de toute stipulation expressément contraire dans le Contrat, tout ce que l'Entrepreneur doit faire, fournir, livrer ou accomplir pour l'exécution du Contrat.

1.2 Sauf quant à ceux apparaissant aux Plans et devis, les en-têtes apparaissent dans le Contrat, ne font pas partie du Contrat, mais y sont uniquement pour fin d'utilité pratique.

1.3 Aux fins de l'interprétation du Contrat, en cas de contradiction ou de divergence entre les Plans et devis et les Conditions générales, les Conditions générales prévalent.

1.4 Dans l'interprétation des Plans et devis, en cas de contradiction ou de divergence entre :

- 1.4.1 les Plans et les devis, les devis prévalent;
- 1.4.2 les plans, les plans tracés à l'échelle la plus grande prévalent; et
- 1.4.3 les dimensions exprimées en chiffres et les dimensions à l'échelle, les dimensions exprimées en chiffres prévalent.

## **CG2 Successeurs et ayants droit**

- 2.1 Le Contrat est au bénéfice des parties au Contrat, de même que de leurs héritiers légaux, exécuteurs, administrateurs, successeurs et ayants droit, qui sont tous par ailleurs liés par ses dispositions.

## **CG3 Cession du Contrat**

- 3.1 L'Entrepreneur ne peut céder le Contrat, en tout ou en partie, sans le consentement écrit du Ministre.

## **CG4 Sous-traitance par l'Entrepreneur**

- 4.1 Sous réserve des Conditions générales, l'Entrepreneur peut sous-traiter une partie quelconque des travaux.
- 4.2 L'Entrepreneur doit aviser le représentant ministériel par écrit de son intention de sous-traiter.
- 4.3 L'avis mentionné au paragraphe CG4.2 doit identifier le sous-entrepreneur de même que la partie des travaux qu'il entend lui confier.
- 4.4 Le représentant ministériel peut s'objecter à la sous-traitance projetée en avisant par écrit l'Entrepreneur dans les six jours suivant la réception par le représentant ministériel de l'avis mentionné au paragraphe CG4.2.
- 4.5 Si le représentant ministériel s'oppose à une sous-traitance en vertu du paragraphe CG4.4, l'Entrepreneur ne peut procéder à la sous-traitance envisagée.
- 4.6 L'Entrepreneur ne peut, sans la permission écrite du représentant ministériel, remplacer un sous-entrepreneur dont il a retenu les services conformément aux Conditions générales.
- 4.7 Tout contrat entre l'Entrepreneur et un sous-entrepreneur doit comporter tous les termes et conditions du Contrat qui sont d'application générale.
- 4.8 Nul contrat entre l'Entrepreneur et un sous-entrepreneur ou nul consentement de le représentant ministériel à tel contrat sera interprété comme relevant l'Entrepreneur de quelque obligation en vertu du Contrat ou comme imposant quelque responsabilité à Sa Majesté.

## **CG5 Modifications**

- 5.1 Nulle modification ou changement à quelque disposition du Contrat aura d'effet avant que d'avoir été consignée par écrit.

**CG6 Nulle obligation implicite**

- 6.1 Il ne découlera du Contrat aucune disposition ou obligation implicite de la part de Sa Majesté; seules les dispositions expresses du Contrat, stipulées par Sa Majesté, doivent servir de fondement à tout droit contre Sa Majesté.
- 6.2 Le présent Contrat remplace toutes communications, négociations et ententes, écrites ou verbales, concernant les travaux et qui auraient en lieu avant la date du Contrat.

**CG7 Caractère essentiel des délais et échéances**

- 7.1 Le temps est l'essence même du Contrat.

**CG8 Indemnisation par l'Entrepreneur**

- 8.1 L'Entrepreneur doit tenir Sa Majesté indemne et à couvert de toutes réclamations, demandes, pertes, frais, dommages, actions, poursuites ou procédures de la part de quiconque, fondés, découlant, reliés, occasionnés ou attribuables aux activités de l'Entrepreneur, de ses employés, agents, sous-entrepreneurs et sous-entrepreneurs de ces derniers dans l'exécution des travaux faisant l'objet du Contrat, incluant toute contrefaçon ou prétendue contrefaçon d'un brevet d'invention ou de toute autre forme de propriété intellectuelle.
- 8.2 Aux fins du paragraphe CG8.1, le terme « activités » comprend tout acte ou omission, de même que tout retard à accomplir un acte.

**CG9 Indemnisation par Sa Majesté**

- 9.1 Sa Majesté, sous réserve des dispositions de la Loi sur la responsabilité de la Couronne, de la Loi sur les brevets et de toute autre loi affectant les droits, pouvoirs, privilèges ou obligations de Sa Majesté, doit tenir l'Entrepreneur indemne et à couvert de toutes réclamations, demandes, pertes, frais, dommages, actions, poursuites ou procédures découlant de ses activités en vertu du Contrat et directement attribuables à :
- 9.1.1 une absence ou un vice, actuel ou allégué, dans le titre de Sa Majesté concernant l'emplacement des travaux, ou
- 9.1.2 une contrefaçon ou prétendue contrefaçon par l'Entrepreneur de tout brevet d'invention ou de toute autre forme de propriété intellectuelle, dans l'exécution de tout acte aux fins de Contrat, comportant l'utilisation d'un modèle, d'un plan, d'un dessin ou de toute autre chose fournis par Sa Majesté à l'Entrepreneur aux fins des travaux.

**CG10 Interdiction aux députés de la Chambre des communes de tirer profit d'un contrat**

- 10.1 Conformément à la Loi sur le Parlement du Canada, il est expressément interdit à tout membre de la Chambre des communes de posséder quelque part ou intérêt dans le Contrat, ou d'en tirer quelque bénéfice ou profit.

#### **CG11 Avis**

- 11.1 Tout avis, consentement, ordre, décision, directive ou communication autre qu'un avis suivant le paragraphe CG11.4, qui peut être donné à l'Entrepreneur conformément au Contrat, peut être donné de quelque manière que ce soit.
- 11.2 Tout avis, consentement, ordre, décision, directive ou autre communication devant être donné par écrit à une partie ou une autre conformément au Contrat, sera, sous réserve du paragraphe CG11.4, réputé avoir été effectivement donné :
- 11.2.1 à l'Entrepreneur, s'il a été livré personnellement à l'Entrepreneur ou au surintendant de l'Entrepreneur, ou s'il a été envoyé par la poste, par télex ou par télécopieur à l'Entrepreneur, à l'adresse indiquée au paragraphe A4.1; ou
- 11.2.2 à Sa Majesté, s'il a été livré personnellement au représentant ministériel, ou s'il a été envoyé par la poste, par télex ou par télécopieur au représentant ministériel, à l'adresse indiquée à l'alinéa A1.2.1.
- 11.3 Tout avis, consentement, ordre, décision, directive ou autre communication donné conformément au paragraphe CG11.2 sera réputé avoir été reçu par l'une ou l'autre des parties :
- 11.3.1 le jour où il a été livré, s'il lui a été livré personnellement; ou
- 11.3.2 le jour de sa réception ou le sixième jour après son envoi par la poste, selon la première de ces deux dates, s'il lui a été envoyé par la poste, et
- 11.3.3 dans les 24 heures suivant sa transmission, s'il lui a été envoyé par télex ou par télécopieur.
- 11.4 S'il est livré personnellement, un avis donné en vertu de l'alinéa CG38.1.1 et des articles CG40 et CG41 sera remis à l'Entrepreneur ou, si l'Entrepreneur est une société, une firme, une co-entreprise ou une corporation, à un agent de l'administration ou à un cadre supérieur.

#### **CG12 Matériaux, outillage et biens immobiliers fournis par Sa Majesté**

- 12.1 Sous réserve du paragraphe CG12.2, l'Entrepreneur est responsable envers Sa Majesté de toute perte ou dommage, aux matériaux, à l'outillage ou aux biens immobiliers que Sa Majesté a fournis ou placés sous la garde et le contrôle de l'Entrepreneur aux fins du Contrat, que la perte ou le dommage soit attribuable ou non à des causes indépendantes de la volonté de l'Entrepreneur.
- 12.2 L'Entrepreneur n'est pas responsable envers Sa Majesté de toute perte ou dommage aux matériaux, à l'outillage ou aux biens immobiliers dont il est question au paragraphe CG12.1, si

cette perte ou ce dommage est imputable et directement attribuable à l'usure causée par un usage raisonnable.

- 12.3 L'Entrepreneur doit utiliser les matériaux, l'outillage ou les biens immobiliers dont il est question au paragraphe CG12.1, uniquement pour l'exécution du Contrat et pour aucune autre fin.
- 12.4 Lorsqu'après avoir été requis de le faire par le représentant ministériel, l'Entrepreneur n'a pas, dans un délai raisonnable, indemnisé Sa Majesté pour une perte ou un dommage dont il est responsable en vertu du paragraphe CG12.1, le représentant ministériel peut y pouvoir aux frais de l'Entrepreneur, et ce dernier est dès lors responsable envers Sa Majesté des frais en l'occurrence qu'il devra sur demande payer à Sa Majesté.
- 12.5 L'Entrepreneur doit tenir des registres que le représentant ministériel peut de temps à autre exiger des matériaux, de l'outillage et des biens immobiliers visés par le paragraphe CG12.1 et doit, lorsque le représentant ministériel le l'exige, établir à la satisfaction de ce dernier que les matériaux, l'outillage et les biens immobiliers sont à l'endroit et dans l'état dans lequel ils devraient être.

### **CG13 Matériaux, outillage et biens immobiliers devenus propriété de Sa Majesté**

- 13.1 Sous réserve du paragraphe CG14.7, tous les matériaux et l'outillage, de même que tout droit de l'Entrepreneur sur tous les biens immobiliers, permis, pouvoirs et privilèges achetés, ou utilisés par l'Entrepreneur pour les travaux deviennent, à compter de l'époque où ils ont été achetés ou utilisés, la propriété de Sa Majesté aux fins des travaux et continuent de l'être :
- 13.1.1 dans le cas des matériaux, jusqu'à ce que le représentant ministériel déclare qu'ils ne sont plus requis pour les travaux; et
- 13.1.2 dans le cas de l'outillage, des biens immobiliers, des permis, des pouvoirs et des privilèges, jusqu'à ce que le représentant ministériel déclare que le droit dévolu à Sa Majesté en l'espèce n'est plus requis pour les travaux.
- 13.2 Les matériaux ou l'outillage appartenant à Sa Majesté en vertu du paragraphe CG13.1 ne doivent pas être enlevés des lieux des travaux, utilisés ou aliénés, sauf pour les travaux, sans le consentement écrit du représentant ministériel.
- 13.3 Sa Majesté n'est pas responsable de toute perte ou de tout dommage aux matériaux ou à l'outillage visés par le paragraphe CG13.1 quelle qu'en soit la cause et l'Entrepreneur est responsable de toute perte ou de tout dommage bien que ces matériaux ou outillage appartiennent à Sa Majesté.

### **CG14 Permis et taxes payables**

- 14.1 L'Entrepreneur doit, dans les 30 jours de la date du Contrat, offrir à l'administration municipale, un montant égal à tous les droits et frais qui seraient payables à l'administration municipale pour les permis de construction, si les travaux étaient exécutés pour une personne autre que Sa Majesté.

- 14.2 Dans les dix jours qui suivent l'offre mentionnée au paragraphe CG14.1, l'Entrepreneur avise le représentant ministériel de sa démanche et du montant de cette offre et lui fait savoir si elle a été acceptée ou non par l'administration municipale.
- 14.3 Si l'administration municipale n'a pas accepté la somme offerte aux termes du paragraphe CG14.1, l'Entrepreneur remet ce montant à Sa Majesté dans les six jours suivant l'expiration du délai fixe au paragraphe CG14.2.
- 14.4 Aux fins des paragraphes CG14.1 et CG14.3, l'expression « administration municipale » signifie une administration qui aurait compétence pour autoriser la construction de l'ouvrage si le propriétaire n'en était pas Sa Majesté.
- 14.5 Nonobstant le lieu de résidence de l'Entrepreneur, l'Entrepreneur versera toute taxe applicable découlant de l'exécution des travaux visés par le Contrat.
- 14.6 Conformément à la déclaration mentionnée au paragraphe MP4.9, l'Entrepreneur dont ni le lieu de résidence ni la place d'affaires n'est dans la province où sont effectués les travaux visés par le Contrat, fournira à Sa Majesté une preuve d'enregistrement auprès des autorités provinciales responsables de la taxe de vente dans ladite province.
- 14.7 Aux fins du paiement de la taxe applicable ou de la fourniture d'une garantie de paiement de la taxe applicable découlant de l'exécution des travaux visés par le Contrat, l'Entrepreneur doit, malgré le fait que tous les matériaux et outillage, de même que des droits de l'Entrepreneur sur tous les biens immobiliers, permis, pouvoirs et privilèges, sont devenus la propriété de Sa Majesté après la date d'achat, payer, en tant qu'utilisateur ou consommateur, toute taxe applicable payable au moment de l'utilisation desdits matériaux, outillage ou droits de l'Entrepreneur à titre d'utilisateur, conformément aux lois pertinentes, ou fournir une garantie de paiement à cet égard.

#### **CG15 Exécution des travaux sous la direction du représentant ministériel**

- 15.1 L'Entrepreneur doit :
- 15.1.1 permettre au représentant ministériel d'avoir accès aux travaux et au chantier en tout temps au cours de l'exécution du Contrat;
  - 15.1.2 communiquer au représentant ministériel tous renseignements qu'il demande concernant l'exécution du Contrat; et
  - 15.1.3 fournir au représentant ministériel toute l'assistance possible dans l'accomplissement de son devoir de veiller à ce que les travaux soient exécutés conformément au Contrat, de même que dans l'accomplissement de tout autre devoir et dans l'exercice de tout pouvoir qui lui incombe ou qui lui est conféré par le Contrat.

#### **CG16 Coopération avec d'autres Entrepreneurs**

- 16.1 Lorsque, de l'avis du représentant ministériel, il est nécessaire d'affecter aux travaux ou au chantier d'autres entrepreneurs ou ouvriers, avec ou sans outillage et matériaux, l'Entrepreneur doit, à la satisfaction du représentant ministériel, leur donner accès aux travaux et coopérer avec

eux dans l'accomplissement de leurs fonctions et obligations.

16.2 Si :

16.2.1 l'affectation aux travaux d'autres entrepreneurs ou ouvriers en vertu du paragraphe CG16.1 ne pouvait être raisonnablement prévue par l'Entrepreneur au moment de la conclusion du Contrat; et

16.2.2 de l'avis du représentant ministériel, l'Entrepreneur a encouru des dépenses additionnelles afin de se conformer au paragraphe CG16.1; et

16.2.3 l'Entrepreneur a donné au représentant ministériel un avis écrit de sa réclamation avant l'expiration d'un délai de 30 jours à compter de l'affectation d'autres entrepreneurs ou ouvriers aux travaux ou au chantier;

Sa Majesté rembourse à l'Entrepreneur les frais encourus, calculés conformément aux articles CG48 à CG50, pour le travail, de l'outillage et des matériaux additionnels requis.

**CG17 Vérification des travaux**

17.1 Si, à un moment quelconque après le début des travaux mais avant l'expiration de la période de garantie, le représentant ministériel a des motifs de croire que les travaux en partie de ceux-ci n'ont pas été exécutés conformément au Contrat, il peut demander qu'une vérification de ces travaux soit effectuée par un expert qu'il désigne.

17.2 Si, par suite d'une vérification conformément au paragraphe CG17.1, il est établi que les travaux n'ont pas été exécutés suivant le Contrat, l'Entrepreneur doit, sur demande, payer à Sa Majesté tous les coûts et toutes les dépenses raisonnables que cette vérification lui aura occasionnés, en plus et sans préjudice aux droits et recours de Sa Majesté sous le Contrat, en droit ou en équité.

**CG18 Déblaiement de l'emplacement**

18.1 L'Entrepreneur garde les travaux et leur emplacement propres, sans rebuts, ni débris, et respecte à cet égard toute directive du représentant ministériel.

18.2 Avant l'émission du Certificat provisoire mentionné au paragraphe CG44.2, l'Entrepreneur enlève tout l'outillage et tous les matériaux non requis à l'exécution du reste des travaux. Il enlève également tous rebuts et débris et fait en sorte que les travaux et leur emplacement soient propres et convenables pour leur occupation par les employés de Sa Majesté, sauf indication contraire dans le Contrat.

18.3 Avant l'émission du Certificat définitif d'achèvement mentionné au paragraphe CG44.1, l'Entrepreneur retire des travaux et leur emplacement, l'excédant de l'outillage et des matériaux, de même que tous les rebuts et débris.

18.4 Les obligations qu'imposent à l'Entrepreneur les paragraphes CG18.1 à CG18.3 ne s'appliquent pas aux rebuts et aux débris laissés par les employés de Sa Majesté, ou par les autres entrepreneurs et leurs employés visés au paragraphe CG16.1.

### **CG19 Surintendant de l'Entrepreneur**

- 19.1 L'Entrepreneur désigne sans délai un surintendant après l'adjudication du Contrat.
- 19.2 L'Entrepreneur communique sans délai au représentant ministériel le nom, l'adresse et le numéro de téléphone du surintendant désigné en vertu du paragraphe CG19.1.
- 19.3 Le surintendant désigné en vertu du paragraphe CG19.1 à l'entière responsabilité des opérations de l'Entrepreneur dans l'exécution des travaux et il est en outre autorisé à recevoir au nom de l'Entrepreneur, tous avis, consentement, ordre, directive, décision ou toute autre communication qui peut lui être donné en vertu du Contrat.
- 19.4 Pendant les heures de travail et jusqu'à l'achèvement des travaux, l'Entrepreneur doit garder sur les lieux des travaux un surintendant compétent.
- 19.5 À la demande du représentant ministériel, l'Entrepreneur retire tout surintendant qui, de l'avis du représentant ministériel, est incompetent ou s'est conduit de façon malséante, et il remplace sans délai le surintendant ainsi retiré par un autre surintendant que le représentant ministériel estime acceptable.
- 19.6 Sous réserve du paragraphe CG19.5, l'Entrepreneur ne peut remplacer le surintendant sans le consentement écrit du représentant ministériel.
- 19.7 En cas de contravention par l'Entrepreneur au paragraphe CG19.6, le représentant ministériel peut refuser l'émission de tout Certificat mentionné à l'article CG44 jusqu'à ce que le surintendant ait été réintégré dans ses fonctions ou qu'un autre surintendant acceptable au représentant ministériel l'ait remplacé.

### **CG20 Sécurité nationale**

- 20.1 Si le Ministre estime que la sécurité nationale le requiert, il peut ordonner à l'Entrepreneur :
  - 20.1.1 de lui fournir tout renseignement sur des personnes engagées ou devant l'être aux fins du Contrat, et
  - 20.1.2 de retirer des travaux et de leur emplacement toute personne dont l'emploi peut en l'occurrence, de l'avis du Ministre, comporter un risque pour la sécurité nationale.
- 20.2 Les contrats que l'Entrepreneur pourra conclure avec les personnes qui seront affectées à l'exécution des travaux, doivent contenir des dispositions qui lui permettront de s'acquitter de toute obligation qui lui incombent en vertu des articles CG19, CG20 et CG21.
- 20.3 L'Entrepreneur doit obéir à tout ordre donné par le Ministre suivant le paragraphe CG20.1.

### **CG21 Ouvriers inaptes**

- 21.1 À la demande du représentant ministériel, l'Entrepreneur retire des travaux toute personne engagée par l'Entrepreneur aux fins des travaux qui, de l'avis du représentant ministériel, est incompétente ou s'est conduite de façon malséante et l'Entrepreneur refuse l'accès à l'emplacement des travaux à une personne ainsi retirée.

## **CG22 Augmentation ou diminution des coûts**

- 22.1 Le montant établi dans les Articles de convention doit être ni augmenté, ni diminué en raison d'une augmentation ou d'une diminution du coût des travaux résultant d'une augmentation ou d'une diminution du coût du travail, de l'outillage, des matériaux ou des rajustements salariaux énoncés ou prescrits dans les Conditions de travail.
- 22.2 Nonobstant le paragraphe CG22.1 et l'article CG35, le montant énoncé dans les Articles de convention doit faire l'objet d'un redressement de la manière prévue au paragraphe CG22.3, en cas de modification à une taxe imposée en vertu de la Loi sur l'accise, de la Loi sur la taxe d'accise, de la Loi sur la sécurité de la vieillesse, de la Loi sur les douanes, du Tarif des douanes ou de toute loi provinciale sur la taxe de vente imposant une taxe de vente au détail sur l'achat de biens personnels corporels incorporés dans les biens immobiliers :
- 22.2.1 survenant après la date à laquelle l'Entrepreneur a présenté une soumission pour le Contrat,
- 22.2.2 s'appliquant aux matériaux; et
- 22.2.3 influant sur le coût de ces matériaux pour l'Entrepreneur.
- 22.3 En cas de changement fiscal suivant le paragraphe CG22.2, tout montant pertinent indiqué dans les Articles de convention sera augmenté ou diminué d'un montant égal qui, sur examen des registres mentionnés à l'article CG51, représente l'augmentation ou la diminution, selon le cas, des coûts directement attribuables à ce changement.
- 22.4 Aux fins du paragraphe CG22.2, lorsqu'une taxe fait l'objet d'un changement après la date à laquelle l'Entrepreneur a présenté une soumission mais alors que le ministre des Finances en avait donné avis public avant la date de présentation de la soumission, le changement fiscal est censé être survenu avant la date à laquelle la soumission a été présentée.

## **CG23 Main-d'œuvre et matériaux canadiens**

- 23.1 L'Entrepreneur emploie pour l'exécution des travaux, de la main-d'œuvre et des matériaux canadiens dans toute la mesure où ils sont disponibles, compte tenu des exigences économiques et de la nécessité de poursuivre une exécution diligente des travaux.
- 23.2 Sous réserve du paragraphe CG23.1, l'Entrepreneur emploie, dans la mesure où elle est disponible, la main-d'œuvre de la localité où les travaux sont exécutés, et il recourt aux bureaux des Centres d'emploi du Canada pour recruter les ouvriers, là où la chose est réalisable.
- 23.3 Sous réserve des paragraphes CG23.1 et CG23.2, l'Entrepreneur emploie une proportion raisonnable d'ouvriers qui ont été en service actif dans les Forces armées canadiennes et qui en

ont reçu une libération honorable.

#### **CG24 Protection des travaux et des documents**

- 24.1 L'Entrepreneur garde et protège les travaux, l'emplacement des travaux, le Contrat, les devis, les plans, les dessins, les renseignements, les matériaux, l'outillage et les biens immobiliers, fournis ou non par Sa Majesté à l'Entrepreneur, contre toute perte ou dommage de quelque nature et ne peut les utiliser, donner, démolir ou en disposer sans le consentement écrit du Ministre, sauf si cela est indispensable à l'exécution des travaux.
- 24.2 Si une cote de sécurité est attribuée aux documents ou renseignements donnés ou dévoilés à l'Entrepreneur, l'Entrepreneur prend toutes les mesures que lui enjoint le représentant ministériel pour assurer le degré de sécurité conforme à cette cote.
- 24.3 L'Entrepreneur fournit tous dispositifs de sécurité et aide toute personne à laquelle le Ministre a donné l'autorisation d'inspecter ou de prendre les mesures de sécurité qui s'imposent à l'égard des travaux et de l'emplacement des travaux.
- 24.4 Le représentant ministériel peut ordonner à l'Entrepreneur de faire telles choses et d'effectuer tels travaux additionnels qui, de l'avis du représentant ministériel, sont raisonnables et nécessaires pour assurer l'observation des paragraphes CG24.1 à CG24.3, ou pour rectifier une violation de ces paragraphes.

#### **CG25 Cérémonies publiques et enseignes**

- 25.1 L'Entrepreneur ne permet pas de cérémonie publique relativement aux travaux, sans la permission du Ministre.
- 25.2 L'Entrepreneur n'érige pas ou ne permet pas l'érection d'enseignes ou de panneaux publicitaires sur les travaux ou l'emplacement des travaux sans l'approbation du représentant ministériel.

#### **CG26 Précautions contre les dommages, la transgression des droits, les incendies, et les autres dangers**

- 26.1 L'Entrepreneur doit, à ses propres frais, faire le nécessaire pour s'assurer
- 26.1.1 que nulle personne n'est blessée, nul bien endommagé et nul droit, servitude ou privilège enfreint en raison de l'activité de l'Entrepreneur en vertu du Contrat;
  - 26.1.2 que la circulation à pied ou autrement sur les chemins ou cours d'eau publics ou privés n'est pas indûment entravée, interrompue ou rendue dangereuse par les travaux ou l'outillage;
  - 26.1.3 que les dangers d'incendie sur le chantier ou l'emplacement des travaux sont éliminés et que, sous réserve de tout ordre qui peut être donné par le représentant ministériel, tout incendie est promptement maîtrisé;

- 26.1.4 que la santé et sécurité des personnes occupées aux travaux ne sont pas menacées par les méthodes ou les moyens mis en œuvre;
- 26.1.5 que des services médicaux suffisants sont offerts en tout temps pendant les heures de travail, à toutes personnes occupées aux travaux;
- 26.1.6 que des mesures sanitaires suffisantes sont prises à l'égard des travaux et l'emplacement des travaux; et
- 26.1.7 que tous les jalons, bouées et repères placés sur les travaux ou l'emplacement des travaux par le représentant ministériel ou sur son ordre sont protégés et ne sont pas enlevés, abimés, changés ou détruits.

- 26.2 Le représentant ministériel peut ordonner à l'Entrepreneur de faire toute chose et de construire tout ouvrage additionnel qui, de l'avis du représentant ministériel, est raisonnable ou nécessaire pour assurer l'observation du paragraphe CG26.1 ou pour rectifier une infraction audit paragraphe.
- 26.3 L'Entrepreneur se conforme, à ses propres frais, à tout ordre que le représentant ministériel émet conformément au paragraphe CG26.2.

#### **CG27 Assurances**

- 27.1 L'Entrepreneur souscrit et maintient, à ses propres frais, des polices d'assurance relativement aux travaux et en fournit la preuve au représentant ministériel conformément aux exigences des Conditions d'assurance « E ».
- 27.2 Les polices d'assurance mentionnées au paragraphe CG27.1 doivent être :
  - 27.2.1 en la forme et nature, au montant, pour la durée et suivant les termes et conditions prévus aux Conditions d'assurance « E »; et
  - 27.2.2 prévoir le remboursement des demandes de règlement, conformément à l'article CG28.

#### **CG28 Indemnité d'assurance**

- 28.1 Dans le cas d'une demande de règlement en vertu d'une police d'assurance tous risques chantier (y compris les installations) que maintient l'Entrepreneur conformément à l'article CG27, les sommes dues à l'égard d'un sinistre seront remboursées directement à Sa Majesté, et :
  - 28.1.1 les sommes ainsi versées seront retenues par Sa Majesté aux fins du contrat; ou
  - 28.1.2 si Sa Majesté en décide ainsi, seront conservées par Sa Majesté, et le cas échéant, deviendront sa propriété de façon absolue.
- 28.2 Dans le cas d'une demande de règlement en vertu d'une police responsabilité civile générale que maintient l'Entrepreneur conformément à l'article CG27, l'assureur remboursera directement au

demandeur les sommes dues à l'égard d'un sinistre.

- 28.3 Si le Ministre choisit conformément au paragraphe CG28.1 de conserver l'indemnité d'assurance, il peut faire effectuer une vérification de la comptabilité de l'Entrepreneur et de Sa Majesté relativement à la partie des travaux perdue, endommagée ou détruite, afin d'établir la différence, s'il en est, entre
- 28.3.1 l'ensemble du montant des pertes ou dommages subis par Sa Majesté, incluant tous frais encourus pour le déblaiement et le nettoyage des travaux et l'emplacement des travaux et de toute autre somme payable par l'Entrepreneur à Sa Majesté en vertu du Contrat, moins toute somme retenue conformément à l'alinéa CG28.1.2; et
- 28.3.2 l'ensemble des sommes payables par Sa Majesté à l'Entrepreneur en vertu du Contrat à la date où la perte ou les dommages ont été subis.
- 28.4 Toute différence établie conformément au paragraphe CG28.3 doit être payée sans délai par la partie débitrice à la partie créancière.
- 28.5 Suite au paiement prévu au paragraphe CG28.4, Sa Majesté et l'Entrepreneur sont réputés libérés de tous droits et obligations en vertu du Contrat, à l'égard seulement de la partie des travaux qui a fait l'objet d'une vérification mentionnée au paragraphe CG28.3.
- 28.6 S'il n'est pas exercé de choix en vertu du paragraphe CG28.1.2, l'Entrepreneur, sous réserve du paragraphe CG28.7, déblaie et nettoie les travaux et l'emplacement des travaux et il restaure et remplace à ses frais la partie des travaux qui a été perdue ou endommagée, comme si ces travaux n'avaient pas encore été exécutés.
- 28.7 Lorsque l'Entrepreneur exécute les obligations prévues au paragraphe CG28.6, Sa Majesté lui rembourse, jusqu'à concurrence des sommes mentionnées au paragraphe CG28.1, les frais de déblaiement, nettoyage, restauration et remplacement en question.
- 28.8 Sous réserve du paragraphe CG28.7, tout paiement par Sa Majesté en exécution des obligations prévues au paragraphe CG28.7 est effectué conformément aux dispositions du Contrat, mais chaque paiement doit représenter 100% du montant réclamé, nonobstant les alinéas MP4.4.1 et MP4.4.2.

## **CG29 Garantie du contrat**

- 29.1 L'Entrepreneur obtient et dépose auprès du représentant ministériel une ou des garanties conformément aux conditions de garantie du contrat.
- 29.2 S'il est déposé une garantie auprès du représentant ministériel en vertu du paragraphe CG29.1 constituant en tout ou en partie en un dépôt de garantie, ce dépôt sera traité conformément aux articles CG43 et CG45 des Conditions générales.
- 29.3 Si la garantie en vertu du paragraphe CG29.1 consiste, en partie, en un cautionnement (bond) pour le paiement de la main-d'œuvre et des matériaux, l'Entrepreneur affiche une copie de ce cautionnement sur l'emplacement des travaux.

### **CG30 Modifications aux travaux**

- 30.1 Sous réserve de l'article CG5, le représentant ministériel peut, à tout moment avant de délivrer son Certificat définitif d'achèvement :
- 30.1.1 exiger des travaux ou des matériaux en sus de ceux qui ont été prévus dans les Plans et devis; et
  - 30.1.2 supprimer ou modifier les dimensions, le caractère, la quantité, la qualité, la description, la situation ou la position de la totalité ou d'une partie des travaux ou matériaux prévus dans les Plans et devis ou exigés en conformité de l'alinéa CG30.1.1.
- à condition que ces travaux ou matériaux supplémentaires, ou que ces suppressions ou modifications soient, selon lui compatibles avec l'intention du Contrat.
- 30.2 L'Entrepreneur exécute les travaux conformément aux ordres, suppressions et modifications émis de temps à autre par le représentant ministériel en vertu du paragraphe CG30.1, comme s'ils faisaient partie des Plans et devis.
- 30.3 Le représentant ministériel décide si ce que l'Entrepreneur a fait ou omis de faire conformément à un ordre, une suppression ou une modification en vertu du paragraphe CG30.1 a augmenté ou diminué le coût des travaux pour l'Entrepreneur.
- 30.4 Si le représentant ministériel décide, conformément au paragraphe CG30.3, qu'il y a eu augmentation du coût pour l'Entrepreneur, Sa Majesté paie à l'Entrepreneur le coût accru que l'Entrepreneur a nécessairement encouru pour les travaux supplémentaires, calculé conformément aux articles CG49 ou GB50.
- 30.5 Si le représentant ministériel décide, conformément au paragraphe CG30.3, qu'il y a eu réduction du coût pour l'Entrepreneur, Sa Majesté réduit le montant payable à l'Entrepreneur en vertu du Contrat d'un montant égal à la réduction du coût occasionné par toute suppression ou modification ordonnée conformément au paragraphe CG30.1.2, calculé conformément à l'article CG49.
- 30.6 Les paragraphes CG30.3 à CG30.5 s'appliquent seulement à un contrat ou partie d'un contrat comportant, suivant le Contrat, une Entente à prix fixe.
- 30.7 Tout ordre, suppression ou modification mentionné au paragraphe CG30.1 doit être par écrit, porter la signature du représentant ministériel et être communiqué à l'Entrepreneur conformément au paragraphe CG11.

### **CG31 Interprétation du Contrat par le représentant ministériel**

- 31.1 Avant la délivrance par le représentant ministériel du Certificat définitif d'achèvement mentionné au paragraphe CG44.1, le représentant ministériel tranche toute question concernant l'exécution des travaux ou les obligations de l'Entreteneur en vertu du Contrat et en particulier, mais sans limiter la portée générale de ce qui précède, concernant :

- 31.1.1 la signification de quoi que ce soit dans les Plans et devis;
  - 31.1.2 l'Interprétation des Plans et devis au cas d'erreur, omission, obscurité ou divergence dans leur texte ou intention;
  - 31.1.3 le respect des exigences du Contrat quant à la quantité ou la qualité des matériaux ou du travail que l'Entrepreneur fournit ou se propose de fournir;
  - 31.1.4 la suffisance de la main-d'œuvre, de l'outillage ou des matériaux que l'Entrepreneur fournit pour la réalisation des travaux et du Contrat, pour assurer l'exécution des travaux suivant le Contrat et l'exécution du Contrat conformément à ses dispositions;
  - 31.1.5 la qualité de tout genre de travail effectué par l'Entrepreneur; ou
  - 31.1.6 l'échéancier et la programmation des diverses phases de l'exécution des travaux;
- et la décision du représentant ministériel est sans appel, pour ce qui est des travaux.
- 31.2 L'Entrepreneur exécute les travaux conformément aux décisions et directives du représentant ministériel en vertu du paragraphe CG31.1 et conformément à toute décision et directive du représentant ministériel que en découlent.

### **CG32 Garantie et rectification des défauts des travaux**

- 32.1 Sans restreindre les garanties implicites ou explicites de la loi ou du Contrat, l'Entrepreneur doit, à ses propres frais
- 32.1.1 rectifier toute défectuosité et corriger tout vice qui se manifeste dans les travaux ou qui est signalé au Ministre quant aux parties du travail acceptées relativement au Certificat provisoire d'achèvement mentionné au paragraphe CG44.2 dans les 12 mois qui suivront la date d'émission du Certificat provisoire d'achèvement.
  - 32.1.2 rectifier toute défectuosité et corriger tout vice qui se manifeste dans les travaux ou qui est signalé au Ministre relativement aux parties des travaux décrites dans le Certificat provisoire d'achèvement mentionné au paragraphe CG44.2 dans les 12 mois qui suivent la date d'émission du Certificat définitif d'achèvement mentionné au paragraphe CG44.1.
- 32.2 Le représentant ministériel peut ordonner à l'Entrepreneur de rectifier ou corriger toute défectuosité ou tout vice mentionné au paragraphe CG32.1 ou couvert par toute autre garantie implicite ou explicite.
- 32.3 L'ordre mentionné au paragraphe CG32.2.1 doit être par écrit; il peut préciser le délai dans lequel l'Entrepreneur doit rectifier ou corriger la défectuosité ou le vice et il doit être donné à l'Entrepreneur conformément à l'article CG11.
- 32.4 L'Entrepreneur doit rectifier la défectuosité ou corriger le vice mentionné dans l'ordre donné en conformité du paragraphe CG32.2 dans le délai qui y est stipulé.

### **CG33 Défaut de l'Entrepreneur**

- 33.1 Si l'Entrepreneur omet de se conformer à une décision ou directive rendue ou émise par le représentant ministériel en vertu des articles CG18, CG24, CG26, CG31 ou CG32, le représentant ministériel peut recourir aux méthodes qui lui semblent opportunes pour exécuter ce que l'Entrepreneur a omis d'exécuter.
- 33.2 L'Entrepreneur paie à Sa Majesté, sur demande, la totalité de tous les frais, dépenses et dommages encourus par Sa Majesté en raison du défaut de l'Entrepreneur de se conformer à toute décision ou directive stipulée au paragraphe CG31.1 et en raison de toute méthode utilisée en l'occurrence par le représentant ministériel conformément au paragraphe CG33.1.

### **CG34 Protestations des décisions du représentant ministériel**

- 34.1 L'Entrepreneur peut contester, dans les dix jours de sa réception, une décision ou directive mentionnée aux paragraphes CG30.3 ou CG33.1.
- 34.2 Toute contestation mentionnée au paragraphe CG34.1 doit être par écrit, indiquer tous les motifs de la contestation, être signée par l'Entrepreneur et communiquée à Sa Majesté par l'entremise du représentant ministériel.
- 34.3 Si l'Entrepreneur proteste conformément au paragraphe CG34.2, le fait pour lui de se conformer à la décision ou à la directive qu'il conteste ne sera pas interprété comme une reconnaissance du bienfondé de cette décision ou de cette directive et ne pourra constituer une fin de non-recevoir quant à toute poursuite qu'il estimera appropriée dans les circonstances.
- 34.4 Tout protêt de l'Entrepreneur en vertu du paragraphe CG34.2 ne le dispense de se conformer à la décision ou directive en question.
- 34.5 Sous réserve du paragraphe CG34.6, l'Entrepreneur doit, sous peine de déchéance, intenter toute poursuite judiciaire mentionnée au paragraphe CG34.3 dans les trois mois suivant la date d'émission du Certificat définitif d'achèvement mentionné au paragraphe CG44.1.
- 34.6 L'Entrepreneur doit, sous peine de déchéance, intenter dans les trois mois suivant la fin d'une période de garantie, toute poursuite judiciaire mentionnée au paragraphe CG34.3 et découlant d'un ordre donné en vertu de l'article CG32.
- 34.7 Sous réserve du paragraphe CG34.8, si Sa Majesté tient la contestation de l'Entrepreneur comme bien fondée, elle doit lui rembourser le coût des travaux, de l'outillage et des matériaux additionnels nécessaires à l'exécution de l'ordre ou de la directive ayant fait l'objet du protêt.
- 34.8 Les couts mentionnés au paragraphe CG34.7 doivent être calculés conformément aux dispositions des articles CG48 à CG50.

### **CG35 Changement des conditions du sol – Négligence ou retard de la part de Sa Majesté**

- 35.1 Sous réserve du paragraphe CG35.2, nul paiement autre qu'un paiement expressément stipulé au Contrat n'est fait par Sa Majesté à l'Entrepreneur en raison de quelque dépense supplémentaire

encourue ou pour quelque perte ou dommage subi par l'Entrepreneur.

35.2 Si l'Entrepreneur encourt des frais supplémentaires ou subit des pertes ou dommages directement attribuables :

35.2.1 à un écart substantiel entre les renseignements sur les conditions du sol à l'emplacement des travaux, dans les Plans et devis ou d'autre documents fournis à l'Entrepreneur pour l'établissement de sa soumission, ou à un écart substantiel entre une présomption raisonnable de l'Entrepreneur fondée sur lesdits renseignements et les conditions réelles rencontrées par l'Entrepreneur à l'emplacement des travaux lors de leur exécution; ou

35.2.2 à la négligence ou à un retard de la part de Sa Majesté après la date du Contrat, à fournir tout renseignement ou à tout acte auquel Sa Majesté est expressément obligée par le Contrat ou que les usages de l'industrie dicteraient ordinairement à tout propriétaire;

il doit dans les dix jours qui suivent la date de la constatation des conditions du sol décrites à l'alinéa CG35.2.1 ou la date de la négligence ou du retard décrit au paragraphe CG35.2.2, en donner avis par écrit au représentant ministériel et lui signifier son intention d'exiger le remboursement des frais supplémentaires encourus ou le coût de toutes pertes ou dommages subis.

35.3 Lorsque l'Entrepreneur a donné au représentant ministériel l'avis mentionné au paragraphe CG35.3, il doit sous peine de déchéance dans les 30 jours suivant la date de l'émission du Certificat définitif mentionné au paragraphe CG44.1, remettre au représentant ministériel une demande écrite de remboursement des frais supplémentaires ou du coût de toutes pertes ou dommages subis.

35.4 La demande de remboursement mentionnée au paragraphe CG35.3 devra contenir une description suffisante des faits et circonstances qui motivent la demande afin que le représentant ministériel puisse déterminer si cette demande est justifiée ou non, et l'Entrepreneur doit, à cette fin, fournir tout autre renseignement que le représentant ministériel peut exiger.

35.5 Si, de l'avis du représentant ministériel, la demande de remboursement mentionnée au paragraphe CG35.3 est bien fondée, Sa Majesté doit verser à l'Entrepreneur un supplément calculé en conformité des articles CG47 à CG49.

35.6 Si, de l'avis du représentant ministériel, le cas décrit à l'alinéa CG35.2.1 se traduit pour l'Entrepreneur par une économie dans l'exécution du Contrat, le montant établi dans les Articles de convention est, sous réserve du paragraphe CG35.7, réduit d'un montant égal à l'économie réalisée.

35.7 Le montant à être déduit en vertu du paragraphe CG35.6 doit être déterminé selon les dispositions des articles CG47 à CG49.

35.8 Si l'Entrepreneur néglige de donner l'avis mentionné au paragraphe CG35.2 et de présenter la demande de remboursement mentionnée au paragraphe CG35.3 dans le délai prescrit, aucun supplément ne doit lui être versé en l'occurrence.

### **CG36 Prolongation de délai**

- 36.1 Sous réserve du paragraphe CG36.2, le représentant ministériel peut, s'il estime que l'achèvement en retard des travaux est attribuable à des causes indépendantes de la volonté de l'Entrepreneur et sur demande présentée par l'Entrepreneur avant le jour fixe par les Articles de convention pour l'achèvement des travaux ou avant toute autre date fixée auparavant conformément au présent article, prolonger le délai d'achèvement des travaux.
- 36.2 Toute demande mentionnée au paragraphe CG36.1 doit être accompagnée du consentement écrit de la compagnie dont le cautionnement constitue une partie de la garantie du contrat.

### **CG37 Dédommagement pour retard d'exécution**

- 37.1 Aux fins du présent article :
- 37.1.1 les travaux sont censés être achetés le jour ou le représentant ministériel délivre le Certificat provisoire d'achèvement mentionné au paragraphe CG44.2; et
- 37.1.2 « période de retard » signifie la période commençant le jour fixé par les Articles de convention pour l'achèvement des travaux et se terminant le jour précédant immédiatement le jour de l'achèvement, à l'exclusion cependant de tout jour faisant partie d'une période de prolongation accordée en vertu du paragraphe CG36.1 et de tout autre jour où, de l'avis du représentant ministériel, l'achèvement des travaux a été retardé par des causes indépendantes de la volonté de l'Entrepreneur.
- 37.2 Si l'Entrepreneur n'achève pas les travaux au jour fixé par les Articles de convention mais achève ces travaux par la suite, l'Entrepreneur paie à Sa Majesté un montant égal à l'ensemble :
- 37.2.1 de tous les salaires, gages et frais de déplacement versés par Sa Majesté aux personnes surveillant les travaux pendant la période de retard;
- 37.2.2 des coûts encourus par Sa Majesté en conséquence de l'impossibilité pour Sa Majesté de faire usage des travaux achevés pendant la période de retard; et
- 37.2.3 de tous les autres frais et dommages encourus ou subis par Sa Majesté pendant la période de retard par suite de l'inachèvement des travaux à la date prévue.
- 37.3 S'il estime que l'intérêt public le commande, le Ministre peut renoncer au droit de Sa Majesté à la totalité ou partie d'un paiement exigible en conformité du paragraphe CG37.2.

### **CG38 Travaux retirés à l'Entrepreneur**

- 38.1 Le Ministre peut dans les cas suivants et à son entière discrétion, en donnant un avis par écrite à l'Entrepreneur conformément à l'article CG11, retirer à l'Entrepreneur la totalité ou une partie des travaux et recourir aux moyens qui lui semblent appropriés pour achever les travaux si l'Entrepreneur :
- 38.1.1 fait défaut ou retarde à commencer les travaux ou à exécuter les travaux avec diligence et à la satisfaction du représentant ministériel, dans les six jours suivant la réception par

l'Entrepreneur d'un avis par écrite du Ministre ou du représentant ministériel, conformément à l'article CG11 :

- 38.1.2 a néglige d'achever quelque partie des travaux dans le délai imparti par le Contrat;
  - 38.1.3 est devenu insolvable :
  - 31.1.4 a commis un acte de faillite;
  - 31.1.5 a abandonné les travaux;
  - 31.1.6 a fait cession du Contrat sans le consentement requis au paragraphe CG3.1; ou
  - 31.1.7 a de quelque autre façon fait défaut d'observer ou d'accomplir l'une quelconque des dispositions du Contrat.
- 38.2 Si la totalité ou une partie quelconque des travaux a été retirée à l'Entrepreneur en vertu de paragraphe CG38.1.
- 38.2.1 l'Entrepreneur n'a droit, sauf dispositions du paragraphe CG38.4, à aucun autre paiement dû et exigible.
  - 38.2.2 l'Entrepreneur est tenu de payer à Sa Majesté, sur demande, un montant égal à la totalité des pertes et dommages que Sa Majesté aura subis en raison de défaut de l'Entrepreneur d'achever les travaux.
- 38.3 Si la totalité ou partie des travaux retirés à l'Entrepreneur en vertu du paragraphe CG38.1 est achevée par Sa Majesté, le représentant ministériel établit le montant, s'il y en a, de toute retenue ou demande d'acompte de l'Entreteneur existant au moment où les travaux lui ont été retirés et dont, selon le représentant ministériel, on n'a pas besoin pour assurer exécution des travaux ou pour rembourser à Sa Majesté les pertes ou dommages subis en raison du défaut de l'Entrepreneur.
- 38.4 Sa Majesté peut verser à l'Entrepreneur le montant qu'on jugera non requis suivant le paragraphe CG38.3.

### **CG39 Effet du retrait des travaux à l'Entrepreneur**

- 39.1 La retrait de la totalité ou d'une partie des travaux à l'Entrepreneur en conformité de l'article CG38, n'a pas pour effet de libérer l'Entrepreneur d'une obligation quelconque découlant pour lui du Contrat ou de la loi, sauf quant à l'obligation pour lui de continuer l'exécution de la partie des travaux qui lui fut ainsi retirée.
- 39.2 Si la totalité ou partie des travaux est retirée à l'Entrepreneur en conformité de l'article CG38, tous les matériaux et outillage, ainsi que l'intérêt de l'Entrepreneur dans tous les biens immobiliers, permis, pouvoirs et privilèges acquis, utilisés ou fournis par l'Entrepreneur pour les travaux, continuent d'être la propriété de Sa Majesté sans indemnisation de l'Entrepreneur.
- 39.3 Si le représentant ministériel certifie que tout matériau, outillage ou un intérêt quelconque

mentionné au paragraphe CG39.2 n'est plus requis pour les travaux et qu'il n'est plus dans l'intérêt de Sa Majesté de retenir lesdits matériaux, outillage ou intérêt, ils sont remis à l'Entrepreneur.

#### **CG40 Suspension des travaux par le Ministre**

- 40.1 Le Ministre peut, lorsqu'il estime que l'intérêt public le commande, sommer l'Entrepreneur de suspendre l'exécution des travaux pour une durée déterminée ou indéterminée, en lui communiquant par écrit un avis à cet effet, conformément à l'article CG11.
- 40.2 Sur réception suivant l'article CG11 de la sommation mentionnée au paragraphe CG40.1, l'Entrepreneur suspend toutes les opérations sauf celles qui, de l'avis du représentant ministériel, sont nécessaires à la garde et à la préservation des travaux, de l'outillage et des matériaux.
- 40.3 Pendant la période de suspension, l'Entrepreneur ne peut enlever de l'emplacement, sans le consentement du représentant ministériel, quelque partie des travaux, de l'outillage et des matériaux.
- 40.4 Si la période de suspension est de 30 jours ou moins, l'Entrepreneur reprend l'exécution des travaux dès l'expiration de la période de suspension et il a droit au paiement des frais, calculés en conformité des articles CG48 à CG50, du travail, de l'outillage et des matériaux nécessairement encourus en conséquence de la suspension des travaux.
- 40.5 Si, à l'expiration d'une période de suspension de plus de 30 jours, le Ministre et l'Entrepreneur conviennent que l'exécution des travaux sera continuée par l'Entrepreneur, ce dernier reprend les opérations sous réserve des termes et conditions convenus entre lui et le Ministre.
- 40.6 Si, à l'expiration d'une période de suspension de plus de 30 jours, le Ministre et l'Entrepreneur ne conviennent pas que les travaux seront continués par l'Entrepreneur ou ne s'entendent pas sur les termes et conditions suivant lesquels l'Entrepreneur poursuivra l'exécution des travaux, l'avis de suspension est censé être un avis de résiliation et conformément de l'article CG41.

#### **CG41 Résiliation du Contrat**

- 41.1 Le Ministre peut, à n'importe quel moment, résilier le Contrat en donnant avis par écrit à cet effet à l'Entrepreneur conformément à l'article CG11.
- 41.2 Sur réception suivant l'article CG11 de l'avis mentionné au paragraphe CG41.1, l'Entrepreneur cesse toutes opérations dans l'exécution du Contrat, sous réserve de toutes conditions énoncées dans l'avis.
- 41.3 Si le Contrat est résilié conformément au paragraphe CG41.1, Sa Majesté paie à l'Entrepreneur, sous réserve du paragraphe CG41.4, un montant égal :
  - 41.3.1 au coût de tout le travail, l'outillage et les matériaux qu'aura fournis l'Entrepreneur en vertu du Contrat à la date de résiliation, en exécution d'un contrat ou d'une partie de contrat relativement auquel une Entente à prix unitaire est précisée dans le Contrat; ou

41.3.2 au moins :

41.3.2.1 du montant, calculé conformément aux Modalités de paiement, qui aurait été payable à l'Entrepreneur s'il avait achevé les travaux; et

41.3.2.2 du montant que l'on reconnaît devoir à l'Entreteneur en vertu de l'article CG49, concernant un contrat ou une partie de contrat pour lequel le Contrat prévoit une Entente à prix fixe;

moins l'ensemble de tous les montants qui furent payés à l'Entrepreneur par Sa Majesté et de tous les montants dont l'Entrepreneur est redevable envers Sa Majesté en vertu du Contrat.

41.4 Si Sa Majesté et l'Entrepreneur ne peuvent convenir du montant mentionné au paragraphe CG41.3, ce montant sera déterminé suivant la méthode indiquée à l'article CG50.

#### **CG42 Réclamations contre et obligations de la part de l'Entrepreneur ou d'un sous-entrepreneur**

42.1 Afin d'acquitter toutes obligations légales de l'Entrepreneur ou d'un sous-entrepreneur ou de satisfaire à toutes réclamations légales contre eux résultant de l'exécution du Contrat, Sa Majesté peut payer tout montant qui est dû et payable à l'Entrepreneur en vertu du Contrat, directement aux créanciers de l'Entrepreneur ou du sous-entrepreneur, ou aux réclamants en l'occurrence. Toutefois, ce montant que paie Sa Majesté, le cas échéant, ne doit pas excéder le montant que l'Entrepreneur aurait été tenu de verser au réclamant si les dispositions des lois relatives aux privilèges dans les provinces et territoires ou, dans le cas de la province de Québec, de la loi à cet effet dans le Code civil, avaient été applicables aux travaux. Le réclamant n'a pas à respecter les dispositions des lois relatives aux privilèges qui établissent les démarches à suivre au moyen d'avis, d'enregistrements ou d'autre façon, comme il aurait pu être nécessaire de le faire pour conserver ou valider toute réclamation à l'égard de liens émanant du réclamant.

42.2 Sa Majesté n'effectue pas de paiement tel qu'il est décrit au paragraphe CG42.1 à moins que le réclamant lui remette :

42.2.1 un jugement ou une ordonnance exécutoire d'un tribunal compétent établissant le montant qu'aurait eu à verser l'Entrepreneur au réclamant en vertu des dispositions de la loi provinciale ou territoriale relative aux privilèges pertinente ou, dans le cas de la province de Québec, de la loi à cet effet dans le Code civil, si ces lois s'appliquaient aux travaux, ou

42.2.2 une sentence arbitrale définitive et exécutoire établissant le montant qu'aurait eu à verser l'Entrepreneur au réclamant en vertu des dispositions de la loi provinciale ou territoriale relative aux privilèges pertinente ou, dans le cas de la province de Québec, de la loi à cet effet dans le Code civil, si ces lois s'appliquaient aux travaux; ou

42.2.3 le consentement de l'Entrepreneur autorisant le paiement.

Pour déterminer les droits du réclamant en vertu des alinéas CG42.2.1 et CG42.2.2, l'avis exigé au paragraphe CG42.8 sera réputé remplacer l'enregistrement ou la prestation d'un avis après l'achèvement des travaux exigé par les lois applicables, et aucune réclamation ne sera réputée être

expirée, annulée ou non exécutoire parce que le réclamant n'a pas intenté de poursuites dans les délais prescrits par la loi applicable.

- 42.3 Lorsqu'il accepte d'exécuter un Contrat, l'Entrepreneur est réputée avoir consenti de soumettre à l'arbitrage obligatoire, à la demande d'un réclamant, toutes les questions auxquelles il faut répondre pour déterminer si le réclamant a droit au paiement conformément aux dispositions du paragraphe CG42.1. Les parties à l'arbitrage seront, entre autres, le sous-traitant à qui le réclamant a fourni des matériaux ou de l'équipement ou pour qui il a effectué du travail, si le sous-traitant le désire. L'État ne constitue pas une partie à l'arbitrage et, à moins d'une entente contraire entre l'Entrepreneur et le réclamant, l'arbitrage se déroulera conformément à la loi provinciale ou territoriale régissant l'arbitrage applicable dans la province ou le territoire où les travaux sont exécutés.
- 42.4 Une paiement effectuée en conformité du paragraphe CG42.1 comporte quittance de l'obligation de Sa Majesté envers l'Entrepreneur sous le contrat, jusqu'à concurrence du montant payé et peut être déduit d'un montant dû à l'Entrepreneur en vertu du Contrat.
- 42.5 Dans la mesure où les circonstances entourant l'exécution des travaux pour le compte de Sa Majesté le permettent, l'Entrepreneur se conforme à toutes les lois en vigueur dans la province ou le territoire où les travaux sont exécutés quant aux périodes de paiement, aux retenus obligatoires, à la création et à la mise en vigueur de lois concernant les privilèges des fournisseurs ou des constructeurs ou de lois semblables ou, s'il s'agit de la province de Québec, aux dispositions de la loi qui concerne les privilèges.
- 42.6 L'Entrepreneur acquitte toutes ses obligations légales et fait droit à toutes les réclamations légales qui lui sont adressées en conséquence de l'exécution des travaux, au moins aussi souvent que le Contrat oblige Sa Majesté à acquitter ses obligations envers l'Entrepreneur.
- 42.7 Sur demande du représentant ministériel, l'Entrepreneur fait une déclaration attestant de l'existence et de l'état de toutes les obligations et réclamations mentionnées au paragraphe CG42.6.
- 42.8 Le paragraphe CG42.1 ne s'applique qu'aux réclamations et aux obligations :
- 42.8.1 pour lesquelles le représentant ministériel a reçu un avis par écrit avant qu'un paiement n'ait été effectué à l'Entrepreneur conformément au paragraphe MP4.10 et dans les 120 jours suivant la date à laquelle le réclamant :
- 42.8.1.1 aurait dû être payé en totalité conformément au contrat qui le lie à l'Entrepreneur ou à un sous-traitant, s'il s'agit d'une réclamation pour des deniers dont il est légalement requis qu'ils soient retenus du réclamant; ou
- 42.8.1.2 s'est acquitté des derniers services ou travaux ou à fourni les derniers matériaux exigés par le contrat qui le lie à l'Entrepreneur ou à un sous-traitant, s'il ne s'agit pas d'une réclamation mentionnée au sous-alinéa CG42.8.1.1; et
- 42.8.2 pour lesquelles les procédures visant à établir les droits à un paiement, conformément au paragraphe CG42.2, ont commencé dans l'année suivant la date à laquelle l'avis mentionné à l'alinéa CG42.8.1 a été reçu par le représentant ministériel; et

l'avis exige à l'alinéa CG42.8.1 doit faire état du montant réclamé et du principal responsable selon le Contrat.

- 42.9 Sur réception d'un avis de réclamation en vertu de l'alinéa CG42.8.1, Sa Majesté peut retenir de tout montant dû et payable à l'Entrepreneur en vertu du Contrat un partie ou la totalité du montant de la réclamation.
- 42.10 Le représentant ministériel doit aviser l'Entrepreneur par écrit de la réception de toute réclamation mentionné à l'alinéa CG42.8.1 et de l'intention de Sa Majesté de retenir des fonds conformément au paragraphe CG42.9, et l'Entrepreneur peut, à tout moment par la suite et jusqu'à ce que le paiement soit effectué au réclamant, déposer, auprès de Sa Majesté, une garantie acceptable par Sa Majesté dont le montant est équivalent à la valeur de la réclamation. L'avis d'un tel dépôt doit être reçu par le représentant ministériel et, sur réception d'une telle garantie, Sa Majesté doit dégager à l'intention de l'Entrepreneur tous les fonds qui auraient été payables autrement à l'Entrepreneur et qui ont été retenus conformément aux dispositions du paragraphe CG42.9 à l'égard de la réclamation d'un réclamant pour laquelle la garantie a été déposée.

#### **CG43 Dépôt de garantie – Confiscation ou remise**

- 43.1 Si :
- 43.1.1 les travaux sont retirés à l'Entrepreneur conformément à l'article CG38;
  - 43.1.2 le Contrat est résilié en vertu de l'article CG41; ou
  - 43.1.3 l'Entrepreneur a violé ou n'a pas rempli ses engagements en vertu du Contrat;
- Sa Majesté peut s'approprier le dépôt de garantie, s'il en est.
- 43.2 Si Sa Majesté s'approprie le dépôt de garantie conformément au paragraphe CG43.1, le montant obtenu en l'occurrence est censé être une dette payable à l'Entrepreneur par Sa Majesté en vertu du Contrat.
- 43.3 Tout solde du montant mentionné au paragraphe CG43.2, s'il en est, après paiement de toutes pertes dommages ou réclamations de Sa Majesté ou quelqu'un autre, sera payé par Sa Majesté à l'Entrepreneur si, dans l'opinion du représentant ministériel, il n'est pas requis pour les fins du Contrat.

#### **CG44 Certificats du représentant ministériel**

- 44.1 Le jour :
- 44.1.1 où les travaux sont achevés; et
  - 44.1.2 où l'Entrepreneur s'est conformé au Contrat et à tous les ordres et directives donnés conformément au Contrat;

à la satisfaction du représentant ministériel, le représentant ministériel délivre à l'Entrepreneur un Certificat définitif d'achèvement.

- 44.2 Si le représentant ministériel est convaincu que les travaux sont suffisamment achevés, il peut, à tout moment avant la délivrance d'un Certificat définitif d'achèvement mentionné au paragraphe CG44.1 délivrer à l'Entrepreneur un Certificat provisoire d'achèvement, et :
- 44.2.1 aux fins du paragraphe CG44.2, les travaux seront jugés suffisamment achevés
- 44.2.1.1 lorsqu'une partie considérable ou la totalité des travaux visés par le Contrat sont, de l'avis du représentant ministériel, prêts à être utilisés par Sa Majesté ou sont utilisés aux fins prévues; et
- 44.2.1.2 lorsque les travaux qui restent à effectuer en vertu du Contrat peuvent, de l'avis du représentant ministériel, être achevés ou rectifiés à un coût n'excédant pas
- 44.2.1.2.1 -3 p. 100 des premiers 500 000 \$; et
- 44.2.1.2.2 -2 p 100 des prochains 500 000 \$; et
- 44.2.1.2.3 -1 p. 100 du reste
- de la valeur du Contrat au moment du calcul de ce coût.
- 44.3 Aux fins uniquement du sous-alinéa 44.2.1.2, lorsque les travaux ou une partie considérable des travaux sont prêts à être utilisés ou sont utilisés aux fins prévues et que le reste ou une partie des travaux ne peut être achevé pour des raisons indépendantes de la volonté de l'Entrepreneur ou, lorsque le représentant ministériel et l'Entrepreneur conviennent de ne pas achever les travaux dans les délais prescrits, le coût de la partie des travaux que l'Entrepreneur n'a pu terminer pour des raisons indépendantes de sa volonté ou que le représentant ministériel et l'Entrepreneur ont convenu de ne pas terminer dans les délais précisés sera déduit de la valeur du contrat mentionnée au sous-alinéa CG44.2.1.2 et ledit coût ne fera pas partie du coût des travaux qui restent à effectuer aux fins de la détermination de l'achèvement réel.
- 44.4 Le Certificat provisoire d'achèvement mentionné au paragraphe CG44.2 doit décrire les parties des travaux qui n'ont pas été achevées à la satisfaction du représentant ministériel et préciser tout ce que l'Entrepreneur doit faire :
- 44.4.1 avant que le Certificat définitif d'achèvement mentionné au paragraphe CG44.1 puisse être délivré; et
- 44.4.2 avant le début de la période de 12 mois mentionnée au paragraphe CG32.1.2 pour lesdites parties et toutes autres choses.
- 44.5 Le représentant ministériel peut, en plus des points indiqués dans le Certificat provisoire d'achèvement mentionné au paragraphe CG44.2, obliger l'Entrepreneur à rectifier toutes autres parties des travaux qui n'ont pas été achevées à sa satisfaction et faire effectuer toutes autres choses nécessaires pour l'achèvement satisfaisant des travaux.

- 44.6 Si le Contrat ou l'une de ses parties a fait l'objet d'une Entente à prix unitaire, le représentant ministériel mesure et consigne dans un registre les quantités de travail exécuté d'outillage fourni par l'Entrepreneur et de matériaux utilisés pour l'exécution des travaux, et informe, sur demande, l'Entrepreneur au sujet de ces mesurages.
- 44.7 L'Entrepreneur aide le représentant ministériel et coopère avec lui dans l'exécution des tâches précisées au paragraphe CG44.6 et a le droit de prendre connaissance de tout registre tenu par le représentant ministériel suivant le paragraphe CG44.6.
- 44.8 Une fois que le représentant ministériel a délivré le Certificat définitif d'achèvement mentionné au paragraphe CG44.1, il doit, si le paragraphe CG44.6 s'applique, délivrer un Certificat définitif de mesurage.
- 44.9 Le Certificat définitif de mesurage mentionné au paragraphe CG44.8 :
- 44.9.1 indique le total des mesurages des quantités mentionnées au paragraphe CG44.6, et
- 44.9.2 lie de façon péremptoire Sa Majesté et l'Entrepreneur quant aux mesurages des quantités qui y sont consignées.

#### **CG45 Remise du dépôt de garantie**

- 45.1 Après la délivrance du Certificat provisoire d'achèvement mentionné au paragraphe CG44.2 et à condition que l'Entrepreneur n'ait pas violé ses engagements en vertu du Contrat ou omis de les remplir, Sa Majesté retourne à l'Entrepreneur la totalité ou partie du dépôt de garantie, s'il en est, qui de l'avis du représentant ministériel, n'est pas requise aux fins du Contrat.
- 45.2 Au moment de la délivrance du Certificat définitif d'achèvement mentionné au paragraphe CG44.1, Sa Majesté retourne à l'Entrepreneur tout le solde du dépôt de sécurité, sauf stipulation contraire du Contrat.
- 45.3 Si le dépôt de garantie a été versé au Trésor, Sa Majesté doit payer à l'Entrepreneur l'intérêt sur ledit dépôt à un taux établi de temps à autre en vertu du paragraphe 21(2) de la Loi sur la gestion des finances publiques.

#### **CG46 Précision du sens des expressions figurant aux articles CG47 à CG50**

- 46.1 Dans les articles CG47 à CG50 :
- 46.1.1 l'expression « Tableau des prix unitaires » signifie le tableau figurant dans les Articles de convention, et
- 46.1.2 l'expression « outillage » ne comprend pas les outils habituellement fournis par les hommes de métier dans l'exercice de leurs fonctions.

#### **CG47 Additions ou modifications au Tableau des prix unitaires**

- 47.1 Le représentant ministériel et l'Entrepreneur peuvent convenir par écrit, lorsqu'une Entente à prix unitaire s'applique au Contrat ou à l'une de ses parties :
- 47.1.1 d'ajouter au Tableau des prix unitaires des catégories de travail, d'outillage ou de matériaux, des unités de mesurage, de prix par unité et des estimations de quantités lorsque certains travaux, outillage et matériaux devant apparaître dans le Certificat définitif de mesurage mentionné au paragraphe CG44.8 ne figurent dans aucune des catégories de travail, d'outillage ou de matériaux établies au Tableau des prix unitaires; ou
  - 47.1.2 sous réserve des paragraphes CG47.2 et CG47.3, de modifier le prix par unité établi au Tableau des prix unitaires à l'égard d'une quelconque catégorie de travail, d'outillage ou de matériaux y figurant, lorsqu'une quantité a été estimée à l'égard de cette catégorie de travail, d'outillage ou de matériaux, et que le Certificat définitif de mesurage mentionné au paragraphe CG44.8 indique ou est susceptible d'indiquer que la quantité totale de cette catégorie de travail exécuté, d'outillage fourni ou de matériaux utilisés par l'Entrepreneur, pour l'exécution des travaux, est :
    - 47.1.2.1 inférieur à 85% de la quantité estimée; ou
    - 47.1.2.2 supérieure à 115% de la quantité estimée.
- 47.2 Le coût total d'un article figurant au Tableau des prix unitaires qui a été modifié conformément au sous-alinéa 47.1.2.1 ne doit, en aucun cas, excéder le montant qui aurait été payable à l'Entrepreneur si la quantité totale estimative de travail avait été exécutée, la quantité totale estimative d'outillage avait été fournie ou la quantité totale estimative de matériaux, utilisée.
- 47.3 Toute modification rendue nécessaire par le sous-alinéa CG47.1.2.2 ne s'appliquera qu'aux quantités supérieures à 115%.
- 47.4 Si le représentant ministériel et l'Entrepreneur ne s'entendent pas suivant le paragraphe CG47.1, le représentant ministériel détermine la catégorie et l'unité de mesurage du travail, de l'outillage et des matériaux et, sous réserve des paragraphes CG47.2 et CG47.3, le prix par unité est déterminé conformément à l'article CG50.

#### **CG48 Établissement du coût – Tableau des prix unitaires**

- 48.1 Chaque fois qu'il est nécessaire, aux fins du Contrat, d'établir le coût du travail, de l'outillage et des matériaux, on multiplie la quantité de ce travail de cet outillage ou de ces matériaux, exprimée par l'unité énoncée à la colonne 3 du Tableau des prix unitaires, par le prix énoncé en regard de cette unité à la colonne 5 du Tableau des prix unitaires.

#### **CG49 Établissement du coût – Négociation**

- 49.1 Si le mode d'établissement du coût prévu à l'article CG48 ne peut être utilisé parce que le genre ou la catégorie de travail, d'outillage et de matériaux en cause ne figurent pas au Tableau des prix unitaires, le coût du travail, de l'outillage ou des matériaux, aux fins du Contrat est le montant

convenu de temps à autre entre l'Entrepreneur et le représentant ministériel.

- 49.2 Aux fins du paragraphe CG49.1, l'Entrepreneur remet au représentant ministériel lorsque ce dernier le requiert, tout renseignement nécessaire sur ce qu'il lui en coûte en travail, outillage et matériaux mentionnés au paragraphe CG49.1.

#### **CG50 Établissement du coût en cas d'échec des négociations**

- 50.1 Si l'on ne parvient pas à établir le coût du travail, de l'outillage et des matériaux conformément aux méthodes prévues aux articles CG47, CG48 ou CG49, pour les fins mentionnées dans ceux-ci, le coût sera égal à l'ensemble de :

- 50.1.1 tous les montants justes et raisonnables effectivement dépensés ou légalement payables par l'Entrepreneur pour le travail, l'outillage et les matériaux couverts par une des catégories de dépenses prévues au paragraphe CG50.2, qui sont directement attribuables à l'exécution du Contrat;
- 50.1.2 une somme égale à 10% du total des dépenses de l'Entrepreneur mentionnées à l'alinéa CG50.1.1, représentant une indemnité pour profit et pour tous les autres coûts et dépenses, incluant les frais de financement et les intérêts, les frais généraux, dépenses du siège social, et tous autres frais ou dépenses, mais non les coûts et dépenses mentionnés à l'alinéa CG50.1.1 ou CG50.1.3 ou pour une catégorie mentionnée au paragraphe CG50.2;
- 50.1.3 l'intérêt sur les coûts déterminés en vertu des alinéas CG50.1.1 et CG50.1.2, intérêt qui sera calculé conformément à l'article MP9,

pourvu que le coût total d'un article figurant au Tableau des prix unitaires, auquel s'appliquent les dispositions de l'alinéa CG47.1.2.1, n'est pas supérieur au montant qui aurait été payable à l'Entrepreneur si la quantité totale dudit article aurait été effectivement produite, utilisée ou fournie.

- 50.2 Aux fins de l'alinéa CG50.1.1, les catégories de dépenses admissibles dans l'établissement du coût du travail, de l'outillage et des matériaux, sont :
- 50.2.1 les paiements faits aux sous-entrepreneurs;
- 50.2.2 les traitements, salaires et frais de voyage versés aux employés de l'Entrepreneur affectés, proprement dit, à l'exécution des travaux, à l'exception des traitements, salaires, gratifications, frais de subsistance et de voyage des employés de l'Entrepreneur travaillant généralement au siège social ou à un bureau général de l'Entrepreneur, à moins que lesdits employés ne soient affectés à l'emplacement des travaux avec la approbation du représentant ministériel;
- 50.2.3 les cotisations exigibles en vertu d'un texte statutaire relativement aux indemnités des accidents du travail, à l'assurance-chômage, au régime de retraite et aux congés rémunérés;
- 50.2.4 les frais de location d'outillage ou un montant équivalent aux frais de location si l'outillage appartient à l'Entrepreneur qui était nécessaire et qui a été utilisé pour

l'exécution des travaux, à condition que lesdits frais ou la somme équivalente soient raisonnables et que l'utilisation dudit outillage ait été approuvée par le représentant ministériel;

- 50.2.5 les frais d'entretien et de fonctionnement de l'outillage nécessaire à l'exécution des travaux et des frais de réparation à tel outillage qui, de l'avis du représentant ministériel, sont nécessaires à la bonne exécution du Contrat, à l'exclusion de toutes réparations provenant de défauts existant avant l'affectation de l'outillage aux travaux;
- 50.2.6 les paiements relatifs aux matériaux nécessaires et incorporés aux travaux, ou nécessaires à l'exécution du Contrat et utilisés à cette fin; et
- 50.2.7 les paiements relatifs à la présentation, à la livraison, à l'utilisation, à l'érection, à l'installation, à l'inspection, à la protection et à l'enlèvement de l'outillage et des matériaux nécessaires à l'exécution du Contrat et utilisés à cette fin; et
- 50.2.8 tout autre paiement fait par l'Entrepreneur avec l'approbation du représentant ministériel et nécessaire à l'exécution du Contrat.

#### **CG51 Registres à tenir par l'Entrepreneur**

- 51.1 L'Entrepreneur :
  - 51.1.1 tient des registres complets du coût estimatif et réel des travaux, des appels d'offres, des prix cotés, des contrats, de la correspondance, des factures, des reçus et des pièces justificative s'y rapportant;
  - 51.1.2 met à la disposition du Ministre et du sous-receveur général du Canada ou des personnes qu'ils délèguent pour vérification et inspection tous les documents mentionnés à l'alinéa CG51.1.1;
  - 51.1.3 permet à toutes personnes mentionnées à l'alinéa 51.1.2 de faire des copies ou extraits de tous registres et documents mentionnés à l'alinéa CG51.1.1; et
  - 51.1.4 fournit aux personnes mentionnées à l'alinéa CG51.1.2 tous les renseignements qu'elles peuvent exiger de temps à autre au sujet de ces registres et documents.
- 51.2 Les registres tenus par l'Entrepreneur conformément à l'alinéa CG51.1.1, sont conservés intact pendant deux ans à compter de la date de la délivrance du Certificat définitif d'achèvement mentionné au paragraphe CG44.1, ou jusqu'à l'expiration de toute autre période que le Ministre peut fixer.
- 51.3 L'Entrepreneur oblige tous sous-entrepreneurs, et toutes autres personnes qu'il contrôle directement ou indirectement ou qui lui sont affiliés, de même que toutes personnes qui contrôlent l'Entrepreneur directement ou indirectement, à se conformer aux paragraphes CG51.1 et CG51.2 comme s'ils étaient l'Entrepreneur.

#### **CG52 Conflits d'intérêts**

- 52.1 Le présent Contrat stipule qu'aucun ancien titulaire de charge publique qui ne se conforme pas au Code régissant la conduite des titulaires de charge publique en ce qui concerne les conflits d'intérêts et l'après-mandat ne peut retirer des avantages directs du présent Contrat.

**CG53 Situation de l'Entrepreneur**

- 53.1 L'Entrepreneur sera retenu en vertu du Contrat à titre d'entrepreneur indépendant.
- 53.2 L'Entrepreneur et tout employé dudit entrepreneur n'est pas retenu en vertu du Contrat à titre d'employé, d'agent ou de mandataire de Sa Majesté.
- 53.3 Aux fins des paragraphes CG53.1 et CG53.2, l'Entrepreneur sera à lui seul responsable de tous les paiements et de toutes les retenues exigées par la loi, y compris ceux exigés par le Régime de pensions du Canada, le Régime des rentes du Québec, l'assurance-chômage, les accidents du travail ou l'impôt sur le revenu.

## **ATTESTATION D'ASSURANCE DE L'ASSUREUR**

## **CONDITIONS GÉNÉRALES**

### **CA 1 Preuve du contrat d'assurance (02/12/03)**

Dans un délai de trente (30) jours après l'acceptation de la soumission de l'entrepreneur, ce dernier, à moins d'avis contraire par écrit de l'agent d'approvisionnement, doit remettre à l'agent d'approvisionnement, l'Attestation d'assurance d'un assureur dans la forme apparaissant dans le présent document et, si demandé par l'agent d'approvisionnement, remettre à ce dernier les originaux ou les copies certifiées conformes de tous les contrats d'assurance auxquels l'entrepreneur a souscrit conformément aux Exigences des garanties d'assurance décrites ci-après.

### **CA 2 Gestion des risques (01/10/94)**

Les dispositions des Exigences des garanties d'assurance des présentes n'ont pas pour but de couvrir toutes les obligations de l'entrepreneur en vertu de l'article CG8 des Conditions générales « C » du marché. L'entrepreneur est libre, à condition d'en assumer le coût, de prendre des mesures additionnelles de gestion des risques ou des garanties d'assurance complémentaires qu'il juge nécessaire pour remplir ses obligations conformément à l'article CG8.

### **CA 3 Paiement de franchise (01/10/94)**

L'entrepreneur doit assumer le paiement de toutes sommes d'argent en règlement d'un sinistre, jusqu'à concurrence de la franchise.

### **CA 4 Assurance d'assurance (02/12/03)**

L'entrepreneur a déclaré qu'il détient une assurance de responsabilité civile appropriée et habituelle qui est en vigueur conformément aux présentes Conditions d'assurance et il a garanti qu'il obtiendra, en temps opportune et avant le commencement des travaux, l'assurance de biens appropriée et habituelle conformément aux présentes Conditions d'assurance et qu'en outre il maintiendra en vigueur toutes les polices d'assurance requises conformément aux présentes Conditions d'assurance.

## **EXIGENCES DE GARANTIES D'ASSURANCE**

### **PARTIE I**

## **EXIGENCES GÉNÉRALES D'ASSURANCE (EGA)**

### **EGA 1 Assuré (02/12/03)**

Chaque contrat d'assurance doit assurer l'entrepreneur et doit inclure à titre d'Assuré dénommé additionnel, Sa Majesté la Reine du chef du Canada, représentée par le Conseil national de recherches Canada.

**EGA 2 Période d'assurance  
(02/12/03)**

Moins d'avis contraire par écrit de l'agent d'approvisionnement ou d'indication contraire ailleurs dans les présentes Conditions d'assurance, les contrats d'assurance exigés dans les présentes doivent prendre effet le jour de l'attribution du marché et demeurer en vigueur jusqu'au jour de la délivrance du Certificat définitif d'achèvement du représentant ministériel.

**EGA 3 Preuve du contrat d'assurance  
(01/10/94)**

Dans un délai de vingt-cinq (25) jours après l'acceptation de la soumission de l'entrepreneur, l'assureur, à moins d'avis contraire écrit de l'entrepreneur, doit remettre à l'entrepreneur l'Attestation d'assurance d'un assureur dans la forme apparaissant dans le présent document et, si demandé, les originaux ou les copies certifiées conformes de tous les contrats d'assurance auxquels l'entrepreneur a souscrit conformément aux présentes Exigences de présentes garanties d'assurance.

**EGA 4 Avis  
(01/10/94)**

Chaque contrat d'assurance doit renfermer une disposition selon laquelle trente (30) jours avant de procéder à toute modification importante visant la garantie d'assurance, ou à l'annulation de ladite garantie d'assurance, un avis par écrit doit être envoyé par l'assureur à Sa Majesté. Tout avis de cette nature que reçoit l'entrepreneur doit être transmis sans délai à Sa Majesté.

**PARTIE II  
ASSURANCE DE LA RESPONSABILITÉ CIVILE DES ENTREPRISES**

**ARC 1 Portée de l'assurance  
(01/10/94)**

Le contrat d'assurance doit être établi sur un formulaire similaire à celui connu et désigné dans l'industrie de l'assurance sous l'appellation Assurance de la responsabilité civile des entreprises (base d'événement) – BAC 2100, et doit accorder un montant de garantie d'au moins 2 000 000 \$ (tous dommages confondus) pour des dommages corporels et matériels imputables au même événement ou à une série d'événements ayant la même origine. Les frais de justice ou autres déboursés de défense par suite de sinistre ou de réclamation ne viendront pas en déduction du montant de garantie.

**ARC 2 Garanties/Dispositions  
(01/10/94)**

Le contrat d'assurance doit inclure les garanties/dispositions suivantes sans toutefois nécessairement s'y limiter :

- 2.1 La responsabilité découlant de la propriété, de l'existence de l'entretien ou de l'utilisation de lieux par l'entrepreneur et les activités nécessaires ou connexes à l'exécution du présent contrat.
- 2.2 L'extension de la garantie « Dommages matériels et/ou privation de jouissance ».

- 2.3 L'enlèvement ou l'affaiblissement d'un support soutenant des bâtiments ou terrains, que ce support soit naturel ou non.
- 2.4 La responsabilité découlant des appareils de levage et des monte-charge (y compris les escaliers roulants).
- 2.5 La responsabilité civile indirecte des entrepreneurs.
- 2.6 Les responsabilités contractuelles et assumées en vertu du présent contrat.
- 2.7 La responsabilité civile découlant des risques après travaux. En regard de la présente garantie, ainsi que toutes les autres garanties de cette Partie II des présentes Conditions d'assurance, l'assurance doit demeurer en vigueur pendant au moins un (1) an à partir de la date de délivrance du Certificat d'achèvement du représentant ministériel.
- 2.8 Responsabilité réciproque – La clause doit être rédigée comme suit :

Responsabilité réciproque – L'assurance telle que garantie par le présent contrat s'applique à toute demande d'indemnité faite à ou à toute action intentée contre n'importe quel assuré par n'importe quel autre assuré. La garantie d'assurance s'applique de la même façon et dans la même mesure que si un contrat distinct avait été établi à chacun d'eux. L'inclusion de plus d'un assuré n'augmente pas le montant de garantie de l'assureur.

- 2.9 Individualité des intérêts – La clause doit être rédigée comme suit :

Individualité des intérêts – La présente assurance, sous réserve des montants de garantie, s'applique séparément à chaque assuré de la même façon et dans la même mesure que si un contrat distinct avait été établi à chacun d'eux. L'inclusion de plus d'un assuré n'augmente pas le montant de garantie de l'assureur.

### **ARC 3 Risques additionnels (02/12/03)**

Le contrat d'assurance doit couvrir ou être amendé pour couvrir les risques suivants, si l'entreprise y est soumise :

- 3.1 Dynamitage;
- 3.2 Battage de pieux et travail par caisson;
- 3.3 Reprise en sous-œuvre;
- 3.4 Risques associés aux activités de l'entrepreneur dans un aéroport en service;
- 3.5 Contamination par radioactivité par suite de l'utilisation d'isotopes commerciaux;
- 3.6 Endommagement à la partie d'un bâtiment existant hors de la portée directe d'un marché de rénovation, d'addition ou d'installation;
- 3.7 Risques maritimes reliés à la construction de jetés, quais et docks.

**ARC 4 Indemnités d'assurance**  
**(01/10/94)**

Toute indemnité en vertu de la présente assurance est habituellement versée à un tiers réclamant.

**ARC 5 Franchise**  
**(02/12/03)**

Le contrat d'assurance doit être établie avec une franchise d'au plus 10 000 \$ événement quant aux sinistres causés par dommages matériels.

**PART III**  
**ASSURANCE DES CHANTIERS – RISQUES D'INSTALLATION – TOUS RISQUES**

**AC 1 Portée de l'assurance**  
**(01/10/94)**

Le contrat d'assurance doit être établi pour assurer l'entreprise sur un base « Tous risques » donnant un couverture d'assurance identique à celle qui est fournie par les formulaires connues et désignées dans l'industrie des assurances sous les noms de l' « Assurances des Chantiers – Formule globale » ou « Risques d'installation – Tous Risques ».

**AC 2 Biens assurés**  
**(01/10/94)**

Les biens assurés doivent comprendre :

- 2.1 les travaux, ainsi que tous les biens, équipement et matériaux devant être incorporés à l'entreprise achevée à l'endroit du projet, avant, durant et après leur installation, érection ou construction, y compris les essais;
- 2.2 les frais de déblaiement du chantier occasionnés par un sinistre couvert y ayant laissé des débris provenant de biens couverts par la présente assurance, y compris la démolition des biens endommagés, l'enlèvement de la glace et l'assèchement.

**AC 3 Indemnité d'assurance**  
**(01/10/94)**

- 3.1 Toutes indemnités en vertu du contrat d'assurance doit être payées conformément à l'article CG28 des Conditions générales « C » du contrat.
- 3.2 Le contrat d'assurance doit stipuler que toute indemnité en vertu d'icelle doit être payé à Sa Majesté ou selon les directives du Ministre.
- 3.3 L'entrepreneur doit faire toutes choses et exécuter tous documents requis pour le paiement de l'indemnité d'assurance.

**AC 4 Montant d'assurance**

**(01/10/94)**

Le montant de l'assurance doit égalier au moins la somme de la valeur du contrat plus la valeur déclarée (s'il y a lieu) dans les documents du marché de tout le matériel et équipement fourni par Sa Majesté sur le chantier pour être incorporé à l'entreprise achevée et en faire partie.

**AC 5 Franchise**  
**(02/12/94)**

La police doit être établie avec une franchise d'au plus 10 000 \$.

**AC 6 Subrogation**  
**(01/10/94)**

La clause suivante doit être incluse dans le contrat d'assurance :

« Tous droits de subrogation ou transfert de droits sont par les présentes abandonnées contre toutes les personnes physiques ou morales ayant droit au bénéfice de la présente assurance. »

**AC 7 Exclusion**  
**(01/10/94)**

Le contrat d'assurance peut comporter les exclusions normales sous réserve des exceptions suivantes :

- 7.1 Peuvent être exclus les frais inhérents à la bonne exécution des travaux, et rendus nécessaires par des défauts dans les matériaux, la main d'œuvre ou la conception, l'assurance produisant néanmoins ses effets en ce qui concerne les sinistres entraînés par voie de conséquence.
- 7.2 La perte ou les dommages causés par la contamination de matériaux radioactifs, sauf la perte ou les dommages résultant de l'utilisation d'isotopes commerciaux pour la mesure, l'inspection, le contrôle de la qualité, la radiographie ou la photographie industriels.
- 7.3 La mise en service et l'occupation de l'entreprise, en totalité ou en partie, doivent être permis pour les fins auxquels l'entreprise est destiné à son achèvement.

### **CGC1 Obligation de fournir une garantie de contrat**

- 1.1 L'Entrepreneur doit, à ses propres frais, fournir une ou plusieurs des garanties de contrat mentionnées à l'article CGC2.
- 1.2 L'Entrepreneur doit fournir au représentant ministériel la garantie de contrat mentionnée au paragraphe CGC1.1 dans les 14 jours suivant la date à laquelle l'Entrepreneur reçoit un avis lui signifiant l'acceptation de sa soumission par Sa Majesté.

### **CGC2 Types et montants acceptables de garanties de contrat**

- 2.1 L'Entrepreneur fournit au représentant ministériel conformément à l'article CGC1 :
  - 2.1.1 un cautionnement d'exécution et un cautionnement pour le paiement de la main-d'œuvre et des matériaux, représentant chacun au moins 50% du montant payable indiqué dans les Articles de convention; ou
  - 2.1.2 un cautionnement pour le paiement de la main-d'œuvre et des matériaux, représentant au moins 50% du montant payable indiqué dans les Articles de convention, et un dépôt de garantie représentant :
    - 2.1.2.1 au moins 10% du montant indiqué dans les Articles de convention, si ce montant n'excède pas 250 000 \$; ou
    - 2.1.2.2 25 000 \$, plus 5% de la partie du montant du Contrat indiqué dans les Articles de convention qui excède 250 000 \$; ou
  - 2.1.3 un dépôt de garantie représentant le montant prescrit à l'alinéa CGC2.1.2, majoré d'un supplément représentant 10% du montant du Contrat indiqué dans les Articles de convention.
- 2.2 Le cautionnement d'exécution et le cautionnement pour le paiement de la main-d'œuvre et des matériaux mentionnés au paragraphe CGC2.1 doivent être dans une forme approuvée et provenir d'une compagnie dont les cautionnements sont acceptés par Sa Majesté.
- 2.3 Le montant maximum du dépôt de garantie requis en vertu de l'alinéa CGC2.1.2 ne doit pas excéder 250 000 \$, quel que soit le montant du Contrat indiqué dans les Articles de convention.
- 2.4 Le dépôt de garantie mentionné aux alinéas CGC2.1.2 et CGC2.1.3 consiste en :
  - 2.4.1 une lettre de change payable à l'ordre du receveur général du Canada et certifiée par une institution financière approuvée ou tirée par une institution financière approuvée sur son propre compte; ou
  - 2.4.2 des obligations du gouvernement du Canada ou des obligations garanties inconditionnellement quant au capital et aux intérêts par le gouvernement du Canada.
- 2.5 Aux fins du paragraphe CGC2.4 :

- 2.5.1 une lettre de change est un ordre inconditionnel donné par écrit par l'Entrepreneur à une institution financière agréée et obligeant ladite institution à verser, sur demande et à une certaine date, une certaine somme au receveur général du Canada ou à l'ordre de ce dernier; et
- 2.5.2 si une lettre de change est certifiée par une institution financière autre qu'une banque à charte, elle doit être accompagnée d'une lettre ou d'une attestation estampillée confirmant que l'institution financière appartient à au moins l'une des catégories mentionnées à l'alinéa CGC2.5.3 ;
- 2.5.3 une institution financière agréée est :
  - 2.5.3.1 une société ou institution qui est membre de l'Association canadienne des paiements,
  - 2.5.3.2 une société qui accepte des dépôts qui sont garantis par la Société d'assurance-dépôts du Canada ou la Régie de l'assurance-dépôts du Québec jusqu'au maximum permis par la loi,
  - 2.5.3.3 une caisse de crédit au sens de l'alinéa 137(6)(b) de la *Loi de l'impôt sur le revenu*,
  - 2.5.3.4 une société qui accepte du public des dépôts dont le remboursement est garanti par Sa Majesté du chef d'une province, ou
  - 2.5.3.5 la Société canadienne des postes.
- 2.5.4 les obligations mentionnées à l'alinéa CGC2.4.2 doivent être :
  - 2.5.4.1 payables au porteur ;
  - 2.5.4.2 accompagnées d'un document de transfert dûment exécuté à l'ordre du receveur général du Canada, dûment exécuté et dans la forme prescrite par le Règlement concernant les obligations intérieures du Canada; ou
  - 2.5.4.3 enregistrées quant au capital ou quant au capital et aux intérêts au nom du receveur général du Canada, conformément au Règlement concernant les obligations intérieures du Canada; et
  - 2.5.4.4 fournies à leur valeur courante sur le marché à la date du Contrat.
