AMENDMENT 001

Amendment 001 is generated to respond to questions received following the release of Solicitation EB144-180337.

Q1. Can you please confirm if there will be a requirement for silt curtain in the above mentioned project?

A1. If required turbidity monitoring (*as per Specification Section 01 35 44, Clause 1.9.4*) indicates that excessive turbidity is observed, additional mitigation should be implemented to minimize potential effects of the project activities. Additional mitigation could involve a silt curtain or other engineering controls.

.

Q2. We would like to know if suction dredging will be examined since; suction dredging is more efficient than mechanical dredging, and so much more affordable and former suction dredging projects have taken place in the vicinity.?

A2. The current Disposal at Sea (DAS) Permit excludes hydraulic/cutter suction dredging. A new permit application and environmental impact assessment will be required to be submitted for regulatory review/approval, and new permit issued, adding unacceptable delays to project timelines. Consideration of suction dredging is not feasible at this time.

All other terms and conditions remain the same.
