# Technical specifications for the purchase and installation of a 6.4-metric-ton overhead crane

## 1. General information

- 1.1. As part of the infrastructure project for the Advanced Manufacturing Initiative, NRC's Administrative Services and Property Management (NRC-ASPM) branch wants to purchase a 6.4-metric-ton overhead crane for installation at its Montreal-Decelles site, located at 5145 Decelles Avenue, Montreal, QC H3T 2B2.
- 1.2. The overhead crane will be installed on the existing tracks of a 10-UK-ton overhead crane that is to remain in operation.
- 1.3. As part of a separate construction contract, not included in this call for tenders, a partition from the floor to the metal roof girders, at axis 15, will be installed to divide the integration laboratory in two. The existing crane will operate to the west of the new partition, between axes 2 and 15, and the new crane will operate to the east of the new partition, between axes 15 and 24. That partition will be built only after the overhead crane is installed.
- 1.4. Unless the existing overhead crane is specifically mentioned, the term "overhead crane" hereinafter shall refer to the new overhead crane.

## 2. Description of the premises

- 2.1. The overhead crane is to be installed in the integration laboratory, where research in support of the Canadian manufacturing industry is conducted.
- 2.2. The site is not exposed to the elements, is air-conditioned, heated, and classified "low-hazard industrial occupancy", Group F, Division 3.
- 2.3. All dimensions provided below are approximate and shall be confirmed by the contractor before any work can begin:
  - 2.3.1. The tracks of the existing overhead crane are made up of a W-beam with a 311-mm-wide C-profile on top.
  - 2.3.2. The distance from the top of the tracks to the floor is 8,000 mm.
  - 2.3.3. The centre-centre distance between the tracks is 13,570 mm.
  - 2.3.4. The nominal distance between the roof girders and the floor is 9,000 mm.

## Supply of the overhead crane and accessories

### 3. Technical specifications of the overhead crane

- 3.1. The work to be carried out on the overhead crane requires a high degree of precision: for example, delicate parts weighing two or three tonnes must be positioned with a precision in the order of one millimetre. The choice of components and their integration into the overall structure must be done in consideration of the high degree of finesse and manoeuvrability the operators need.
- 3.2. All overhead crane motion is driven by means of electric motors. The minimum and maximum speeds of all overhead crane motion are summarized in the table below:

Overhead crane speeds			
	Overhead crane motion on the tracks	Trolley motion on the overhead crane	Up and down motion of the hoists
The minimum speed must be equal to or below:	10 ft/min	5 ft/min	2 ft/min
	0.051 m/s	0.025 m/s	0.01 m/s
The maximum speed must be equal to or above:	100 ft/min	50 ft/min	20 ft/min
	0.51 m/s	0.25 m/s	0.1 m/s

- 3.3. All motors shall be controlled with programmable variable-frequency drives.
- 3.3.1. The speed of each motion must be infinitely variable.
- 3.3.2. Start and stop operations must be gradual, without jerks.
- 3.3.3. The acceleration rate must be programmable.
- 3.3.4. The deceleration rate must be programmable.
- 3.3.5. The use of dry contacts to activate the motors is not acceptable, jerky motion similar to that caused by relay switches shall automatically lead to the rejection of the overhead crane control system.
- 3.4. Motion control shall use momentary pushbuttons with two pressure levels so that operators can control speeds according to need. Applying light pressure maintains the current speed, and heavier pressure gradually increases speed up to maximum, or until the operator decreases the pressure in order to maintain the new speed.
- 3.5. The overhead crane shall be equipped with two 3.2-metric-ton cable hoists.
- 3.6. Two beams shall link the two end trolleys of the overhead crane. The hoists shall move between the two beams so as to achieve maximum distance under the hooks at their topmost position.
- 3.7. The overhead crane shall be designed so as to achieve maximum distance under the hooks, but with 76 mm clearance between the top of the highest crane component and the bottom of the lowest part of the existing roof girders.
- 3.8. Each of the two hoists shall be separately remote-controlled for individual operation. They shall also be electronically coupled for easy synchronous operation when needed.

- 3.9. The overhead crane shall be equipped with a pendant controller to be kept in a special compartment on the overhead crane structure for emergency use, should the remote controls fail.
- 3.10. Each of the two hoists shall be equipped with a device that projects a small red cross directly under the hooks at all times when the E-stop button is pulled. This device must allow positioning the hoist exactly where the load must be attached for perfectly vertical lift on both axes, ensuring that no horizontal forces are placed on the load.

#### 4. Safety systems

- 4.1. In addition to the safety systems required in the laws, codes and standards in force in the province of Quebec, the overhead crane shall meet the following requirements:
- 4.2. Each of the overhead crane's two hoists shall be equipped with upper and lower limit switches.
- 4.3. The overhead crane shall automatically slow down when approaching the trolley stops and come to a halt without bumping into them, even if the operator is still pressing the activation button. Measurement of the distance between the overhead crane and the trolley stops shall be performed by a touchless device.
- 4.4. Each of the overhead crane's three controllers shall be equipped with a red E-stop switch.
- 4.5. Once the E-stop has been pulled, the overhead crane's horn shall be activated once by the operator before any of the crane's operations are allowed to move.
- 4.6. A hinged safety barrier shall be installed against the wall to keep pedestrians from entering the Level 1 walkway at axis 13, and unwittingly walk under an overhead load. The barrier shall be equipped with a lockout switch to keep the existing overhead crane from approaching the area if the barrier is not in place.
- 4.7. The new overhead crane shall be equipped with a Datalogger brand operator management system of the same model as the existing overhead crane. The existing management system shall be programmed so as to integrate the new overhead crane's information into its database.
- 4.8. The load-bearing capacity of the tracks has been checked by an engineering firm, confirming that the tracks are capable of supporting both overhead cranes, so long as they remain at least seven (7) metres apart from each other on either side of axis 15. This shall require a lockout system specifically designed for health & safety applications. The lockout system shall ensure compliance with the following conditions:
  - 4.8.1. During normal operations, the existing overhead crane shall never come within seven (7) metres of axis 15.
  - 4.8.2. During normal operations, the new overhead crane shall be free to use the entire space between axes 15 and 24.
  - 4.8.3. For the existing overhead crane to come within seven (7) metres of axis 15, the new overhead crane must be parked against the trolley stops at axis 24.

- 4.8.4. For the new overhead crane to come within seven (7) metres of axis 15, the removable safety barrier must be in place to ensure that no one can enter the laboratory from the corridor in front of the machining shop.
- 4.8.5. When the existing overhead crane is within seven (7) metres of axis 15, the new overhead crane shall be locked in place against the trolley stops at axis 24.

## **Overhead crane installation and startup, and other modifications**

### 5. Modifications to the existing tracks

- 5.1. Inspect and clean the entire length of the existing tracks, from axis 2 to axis 24 (about 72 m). Scrape off any imbedded dirt on the rolling surfaces of the tracks.
- 5.2. Remove the existing trolley stops at axis 24 and reinstall them west of axis 15, and adjust carefully.
- 5.3. Supply and install trolley stops at axes 15 and 24 to prevent potential collisions between the overhead crane and any part of the building. Carefully adjust the trolley stops.

### 6. Power supply

- 6.1. Move the existing overhead crane's power supply panel from its current location near axis 24 and coming from the electrical sub to its new location in the corridor on the wall near axis 13.
- 6.2. The existing overhead crane is powered by a set of four (4) copper busbars that run the entire length of the laboratory. Cut the busbars and properly secure/support them on either side of the new partition at axis 15.
- 6.3. Relocate the existing overhead crane's control panel and Datalogger panel to the hallway wall near axis 13.
- 6.4. Connect the existing overhead crane's control panel to the busbar section west of axis 15.
- 6.5. Install the new overhead crane's control panel against the new staircase wall, near axes S and 23.
- 6.6. Install a new power supply panel from the electrical sub to the new overhead crane's control panel.
- 6.7. Connect the new overhead crane's control panel to the busbar section east of axis 15.

### 7. Installation of the new overhead crane onto the tracks

- 7.1. The overhead crane shall be installed at the exact time when the floor between axes 12 and 24 has been completely cleared, but before the demolition of the concrete slab has started in that area.
- 7.2. The contractor shall coordinate the exact date with the overhead crane's manufacturer and NRC-ASPM Project Manager. The exact date has not yet been confirmed, but the target date is in the week of August 14.
- 7.3. The existing overhead crane can be used to bring the new overhead crane to the work area. The supplier of the new overhead crane shall perform full inspections of the overhead crane at the start and at the end of the work.

## 8. Warranty

- 8.1. The manufacturer of the overhead crane shall provide a warranty against any manufacturing and operating defects for a minimum one (1) year.
- 8.2. The manufacturer of the overhead crane shall honour the manufacturer's warranty on all parts.
- 8.3. The overhead crane's warranty shall begin on March 31<sup>st</sup>, 2018, as NRC will not be using the overhead crane before the construction work has been completed.
- 8.4. The general contractor shall not have NRC-ASPM's authorisation to use the overhead crane for construction purposes. The overhead crane shall be locked out throughout the entire duration of the construction contract. However, the general contractor could negotiate conditions of use of the overhead crane directly with the manufacturer, but NRC-ASPM shall require that the overhead crane be in perfect working order as of March 31<sup>st</sup>, 2018, with no visible marks or other signs of wear on any of the components, including the control boxes, remote-controls, hooks, blocks, cables, and any other component of the new overhead crane.
- 8.5. Ten (10) percent of the contracted amount shall be withheld until March 31<sup>st</sup>, 2018, at which time NRC-ASPM will perform the final inspection and acceptance of the overhead crane.

such claimant had the provisions of the Provincial or Territorial lien legislation, or, in the Province of Quebec, the law relating to privileges, been applicable to the work. Any such claimant need not comply with the provisions of such legislation setting out the steps by way of notice, registration or otherwise as might have been necessary to preserve or perfect any claim for lien or privilege which claimant might have had;

42.5 To the extent that the circumstances of the work being performed for Her Majesty permit, the Contractor shall comply with all laws in force in the Province or Territory where the work is being performed relating to payment period, mandatory holdbacks, and creation and enforcement of mechanics' liens, builders' liens or similar legislation or in the Province of Quebec, the law relating to privileges.

which was either beyond the control of the Contractor to complete or the Departmental Representative and the Contractor have agreed not to complete by the time specified shall be deducted from the value of the contract referred to GC44.2.1.2 and the said cost shall not form part of the cost of the work remaining to be done in determining substantial completion.

44.4 An Interim Certificate of Completion referred to in GC44.2 shall describe the parts of the work not completed to the satisfaction of the Departmental Representative and all things that must be done by the Contractor

44.4.1 before a Final Certificate of Completion referred to in GC44.1 will be issued, and

44.6 If the contract or a part thereof is subject to a Unit Price Arrangement, the Departmental Representative shall measure and record the quantities of labour, plant and material, performed, used and supplied by the Contractor in performing the work and shall, at the request of the Contractor, inform him of those measurements.

- 47.1.2 subject to GC47.2 and GC47.3, amend a price set out in the Unit Price Table for any class of labour, plant or material included therein if the Final Certificate of Measurement referred to in GC44.8 shows or is expected to show that the total quantity of that class of labour, plant or material actually performed, used or supplied by the Contractor in performing the work is
- 47.1.2.1 less than 85% of that estimated total quantity, or
- 47.1.2.2 in excess of 115% of that estimated total quantity.

**GC49 Determination of Cost – Negotiation**

- 49.1 If the method described in GC48 cannot be used because the labour, plant or material is of a kind or class that is not set out in the Unit Price Table, the cost of that labour, plant or material for the purposes of the contract shall be the amount agreed upon from time to time by the Contractor and the Departmental Representative.

- 50.2.5 payments for maintaining and operating plant necessary for and used in the performance of the work, and payments for effecting such repairs thereto as, in the opinion of the Departmental Representative, are necessary to the proper performance of the contract other than payments for any repairs to the plant arising out of defects existing before its allocation to the work;
