PROJECT TITLE: Development of enabling space technologies

The above mentioned Request for Proposal (RFP) is hereby amended to answer question received:

1. For Priority Technology 1 (PT- 1): Autonomy Software Framework (ASF)

Question:

According to the RFP, "The aim of this [ASF] technology development is to define, implement and test the ASF on a *representative target system* [emphasis added]" (Page 28). It is further stated several times in the RFP that ASF could be used to operate any kind of hardware "including rovers, arms, scientific instruments, satellites and others" (Pages 28, 29 and 65). However, the task definitions (Section 5.1, Table 3, Page 35) specify demonstration of ASF using a model of a representative 7-DOF space manipulator, while DID-0905 (Page 60) implies a rover as the representative target system. Would CSA consider an ASF demonstration with other representative target systems, such as a science instrument model or a satellite model?

Answer:

The goal of ASF is to operate any kind of hardware.

There are two groups of tasks that relate to demonstrating the ASF. Task T11 from Table 3 can be on a science instrument model or satellite. Tasks T12 through T14 however are for a 7-DOF manipulator.

The intent of DID-0905 is to provide guidelines on the general expectations of operating procedures and users guide for the ASF. However, the title of DID-0905 is misleading; mentions of "Rover" in title and content should be ignored in applying this DID for this particular Priority Technology.

ALL OTHER TERMS AND CONDITIONS OF THE RFP REMAIN UNCHANGED
