

PART 1 - GENERAL

1.1 REFERENCES

- .1 ASTM International
  - .1 ASTM C 645-14e1, Standard Specification for Nonstructural Steel Framing Members.
  - .2 ASTM C 754-17, Standard Specification for Installation of Steel Framing Members to Receive Screw-Attached Gypsum Panel Products.
- .2 Canada Green Building Council (CaGBC)
  - .1 LEED Canada 2009 for Design and Construction-2010, LEED Canada 2009 for Design and Construction Leadership in Energy and Environmental Design Green Building Rating System Reference Guide.
- .3 Environmental Choice Program (ECP)
  - .1 CCD-047-98(R2005), Architectural Surface Coatings.
  - .2 CCD-048-95(R2006), Surface Coatings - Recycled Water-Borne.
- .4 Health Canada/Workplace Hazardous Materials Information System (WHMIS)
  - .1 Material Safety Data Sheets (MSDS).
- .5 The Master Painters Institute (MPI)
  - .1 Architectural Painting Specification Manual - current edition.
    - .1 MPI #26, Primer, Galvanized Metal, Cementitious.
- .6 South Coast Air Quality Management District (SCAQMD), California State, Regulation XI. Source Specific Standards
  - .1 SCAQMD Rule 1168-A2005, Adhesives and Sealants Applications.

1.2 ACTION AND  
INFORMATIONAL  
SUBMITTALS

- .1 Submit in accordance with Section 01 33 00 - Submittal Procedures.
- .2 Product Data:
  - .1 Submit manufacturer's instructions, printed product literature and data sheets for metal framing and include product

|  | .5 Packaging Waste Management: remove for reuse<br>or return of pallets, crates, padding,<br>banding, and packaging materials as specified<br>in Construction Waste Management Plan in<br>accordance with Section 01 74 21 -<br>Construction/Demolition Waste Management and<br>Disposal and Section 01 35 21 - LEED<br>Requirements. |

## PART 2 - PRODUCTS

- |               |  |
|---------------|--|
| 2.1 MATERIALS | .1 Non-load bearing channel stud framing: to<br>ASTM C 645, stud size as indicated on<br>drawings, roll formed from 0.79 mm thickness<br>hot dipped galvanized steel sheet, for screw<br>attachment of gypsum board.<br>.1 Knock-out service holes at 460 mm<br>centres. |
|               | .2 Floor and ceiling tracks: to ASTM C 645, in<br>widths to suit stud sizes, 32 mm flange<br>height.   |
|               | .3 Metal channel stiffener: 38 x 12 mm size, 1.4<br>mm thick cold rolled steel, coated with rust<br>inhibitive coating.  |
|               | .4 Acoustical sealant: in accordance with<br>Section 07 92 00 - Joint Sealants.  |
|               | .5 Sealants: VOC limit to SCAQMD Rule 1168.  |
|               | .6 Insulating strip: rubberized, moisture<br>resistant 3 mm thick foam strip, 12 mm wide,<br>with self sticking adhesive on one face,<br>lengths as required.  |

### PART 3 - EXECUTION

- 3.1 EXAMINATION
- .1 Verification of Conditions: verify that conditions of substrate previously installed under other Sections or Contracts are acceptable for non-structural metal framing application in accordance with manufacturer's written instructions.
    - .1 Visually inspect substrate in presence of Departmental Representative.
    - .2 Inform Departmental Representative of unacceptable conditions immediately upon discovery.
    - .3 Proceed with installation only after unacceptable conditions have been remedied and after receipt of written approval to proceed from Departmental Representative.
- 3.2 ERECTION
- .1 Align partition tracks at floor and ceiling and secure at 600 mm on centre maximum.
  - .2 Install damp proof course under stud shoe tracks of partitions on slabs on grade.
  - .3 Place studs vertically at 400 mm on centre and not more than 50 mm from abutting walls, unless noted otherwise noted on drawings and at each side of openings and corners.
    - .1 Position studs in tracks at floor and ceiling. Cross brace steel studs as required to provide rigid installation to manufacturer's instructions.
  - .4 Erect metal studding to tolerance of 1:1000.
  - .5 Attach studs to bottom and ceiling track using screws.
  - .6 Co-ordinate simultaneous erection of studs with installation of service lines. When erecting studs ensure web openings are aligned.
  - .7 Co-ordinate erection of studs with installation of door/window frames and special
-

3.2 ERECTION  
(Cont'd)

---

- .7 (Cont'd)  
supports or anchorage for work specified in other Sections.
  - .8 Provide two studs extending from floor to ceiling at each side of openings wider than stud centres specified.
    - .1 Secure studs together, 50 mm apart using column clips or other approved means of fastening placed alongside frame anchor clips.
  - .9 Install heavy gauge single jamb studs at openings.
  - .10 Erect track at head of door/window openings and sills of sidelight/window openings to accommodate intermediate studs.
    - .1 Secure track to studs at each end, in accordance with manufacturer's instructions.
    - .2 Install intermediate studs above and below openings in same manner and spacing as wall studs.
  - .11 Frame openings and around built-in equipment, cabinets, access panels, on four sides. Extend framing into reveals. Check clearances with equipment suppliers.
  - .12 Provide 40 mm stud or furring channel secured between studs for attachment of fixtures behind lavatory basins, toilet and bathroom accessories, and other fixtures including grab bars and towel rails, attached to steel stud partitions.
  - .13 Install steel studs or furring channel between studs for attaching electrical and other boxes.
  - .14 Extend partitions to ceiling height except where noted otherwise on drawings.
  - .15 Maintain clearance under beams and structural slabs to avoid transmission of structural loads to studs.
    - .1 Use double track slip joint as indicated.
  - .16 Install continuous insulating strips to isolate studs from uninsulated surfaces.
-

- 3.2 ERECTION  
(Cont'd)
- .17 Install two continuous beads of acoustical sealant and insulating strip under studs and tracks around perimeter of sound control partitions.
- 3.3 CLEANING
- .1 Progress Cleaning: clean in accordance with Section 01 74 11 - Cleaning.  
.1 Leave Work area clean at end of each day.
- .2 Final Cleaning: upon completion remove surplus materials, rubbish, tools and equipment in accordance with Section 01 74 11 - Cleaning.
- .3 Waste Management: separate waste materials for reuse and recycling in accordance with Section 01 74 21 - Construction/Demolition Waste Management and Disposal and Section 01 35 21 - LEED Requirements.  
.1 Remove recycling containers and bins from site and dispose of materials at appropriate facility.
- 3.4 PROTECTION
- .1 Protect installed products and components from damage during construction.
- .2 Repair damage to adjacent materials caused by non-structural metal framing application.
