Installation Manual
- 1.2 ACTION AND
INFORMATIONAL
SUBMITTALS
- .1 Provide submittals in accordance with Section
01 33 00 - Submittal Procedures.
- .2 Provide product data in accordance with
Section 01 33 00 - Submittal Procedures.
- .3 Provide samples in accordance with Section
01 33 00 - Submittal Procedures.
.1 Submit duplicate 300 x 300 x 6 mm thick
samples of each available colour of plastic
matrix terrazzo.
- .4 Sustainable Design Submittals:
.1 LEED Canada - Submittals: in accordance
with Section 01 35 21 - LEED Requirements.
- .5 Closeout Submittals:
.1 Provide maintenance data for plastic
matrix terrazzo for incorporation into manual
specified in Section 01 78 00 - Closeout
Submittals.
- 1.3 QUALITY
ASSURANCE
- .1 Mock-ups: construct mock-ups in accordance
with Section 01 45 00 - Quality Control.
- .2 Construct mock-up 10 m² of each type of
plastic matrix terrazzo including one inside
corner, one outside corner, change of
material, door threshold.
- .3 Construct mock-up where directed.
- .4 Allow 24 hours for inspection of mock-up by
Departmental Representative before proceeding
with ceiling work.
- .5 When accepted, mock-up will demonstrate
minimum standard for this work. Mock-up may
remain as part of the finished work.
-

-
- 1.4 SUSTAINABLE REQUIREMENTS .1 Materials and products in accordance with Section 01 35 21 - LEED Requirements.
- 1.5 DELIVERY, STORAGE AND HANDLING .1 Deliver, store and handle materials in accordance with Section 01 61 00 - Common Product Requirements.
- .2 Deliver materials to job site just prior to installation.
- .3 Store materials inside, in dry location, away from heavy traffic areas.
- .4 Deliver and store materials in manner to prevent damage.
- .5 Ensure materials remain in original wrapping and containers until used.
- .6 Waste Management and Disposal:
.1 Separate waste materials for reuse and recycling in accordance with Section 01 74 21 - Construction/Demolition Waste Management and Disposal.
- 1.6 ENVIRONMENTAL REQUIREMENTS .1 Safety: comply with requirements of Workplace Hazardous Materials Information System (WHMIS) regarding use, handling, storage, and disposal of materials.
.1 Respirators: worn by workers mixing epoxy.
- .2 Ventilation:
.1 Provided continuously during and after installation. Run system 24 hours per day during installation; provide continuous ventilation for 7 days after completion of installation.
- .3 Temperature:
.1 Maintain temperature and structural base temperature at plastic matrix terrazzo installation area above 12 degrees C for 24 hours prior to, during, and for 24 hours following installation.
-

PART 2 - PRODUCTS

- 2.1 COLOURS .1 Colour: as selected by Departmental Representative from manufacturer's standard colour range.
- 2.2 EXPOXY FLOORING .1 Seamless Flooring System comprised of a three component, solvent-free epoxy undercoat consisting of resin, curing agent and filler, with brightly coloured broadcast flaxes, and a two-component, solvent-free UV resistant clear epoxy sealer.
- .1 Meet the VOC limits as required by SCAQMD Rule 1113.
- .2 Physical Properties: provide flooring system in which physical properties of topping including aggregate, when tested in accordance with standards or procedures referenced below, are as follows:
- .1 Tensile Strength: 5,200 psi to ASTM D-638.
- .2 Hardness: 85 to 90 to ASTM D-2240, Shore D.
- .3 Bond Strength: >300 psi to ASTM D-7234 (100% concrete failure).
- .4 Impact Resistance: >160 in./lbs to ASTM D-4226.
- .5 Abrasion Resistance: 0.03 gm max, weight
- .6 Cure Rate: 12 hours for foot traffice (at 77°F/25°C), 24 hours for normal operations.
- .7 Coefficient of Friction (dry): 0.79 to ASTM F-1679.
- .8 Slip Resistance Index (wet): 0.65 to ASTM F-1679.
- .9 Flexural Strength: 4,000 psi to ASTM D-790.
- .10 Flexural Modulus of Elasticity: 1.7 x 10⁶ psi to ASTM D-790.
- .11 Flammability: Class I to ASTM E-648.
- .12 Linear Coefficient of Thermal Expansion: 17 10⁶in./in.°F.
-

2.3 INTEGRAL COVE .1 100 mm high integral base with mill finished
BASE

2.4 JOINT SEALANT .1 As recommended by flooring manufacturer.
MATERIAL

PART 3 - EXECUTION

3.1 PREPARATION .1 Substrate: Concrete preparation shall be by
mechanical means and include use of a shot
blast machine for removal of bond inhibiting
materials such as curing compounds or
laitance.

3.2 APPLICATION .1 General: Apply each component of resinous
flooring system in compliance with
manufacturer's directions to produce a uniform
monolithic wearing surface of thickness
indicated, uninterrupted except at divider
strips, sawn joints or other types of joints
(if any), indicated or required.

.2 Primer: Mix and apply primer over properly
prepared substrate with strict adherence to
manufacturer's installation procedures and
coverage rates.

.3 Integral Cove Base: Install cove base
integral with the floor 100 mm in height. All
coves capped with manufacturer's specialty
designed cove strip.

.4 Broadcast: Immediately broadcast quartz
silica aggregate into the primer using
manufacturer's specially designed spraycaster.
Strict adherence to manufacturer's
installation procedures and coverage rates is
imperative

.5 Undercoat: Mix base material according to
manufacturer's recommended procedures.
Uniformly spread mixed material over
previously primed substrate using

3.2 APPLICATION
(Cont'd)

- .5 Undercoat: (Cont'd)
manufacturer's installation tool. Roll material with strict adherence to manufacturer's installation procedures and coverage rates.
- .6 Broadcast: Immediately broadcast vinyl flakes into the undercoat. Strict adherence to manufacturer's installation procedures and coverage rates is imperative.
- .7 First Sealer: Remove excess unbonded flakes by lightly brushing and vacuuming the floor surface. Mix and apply sealer with strict adherence to manufacturer's installation procedures.
- .8 Second Sealer: Lightly sand first sealer coat. Mix and apply second sealer coat with strict adherence to manufacturer's installation procedures.

3.3 FIELD QUALITY
CONTROL

- .1 The right is reserved to invoke the following material testing procedure at any time, and any number of times during period of flooring application.
- .2 The Departmental Representative may engage service of an independent testing laboratory to sample materials being used on the job site. Samples of material will be taken, identified and sealed, and certified in presence of Contractor.
- .3 Testing laboratory will perform tests for any of characteristics specified, using applicable testing procedures referenced herein, or if none referenced, in manufacturer's product data.
- .4 If test results show materials being used do not comply with specified requirements, Contractor may be directed by Company Representative to stop work; remove non-complying materials; pay for testing; reapply flooring materials to properly prepared surfaces which had previously been coated with unacceptable materials.

3.4 CURING,
PROTECTION AND
CLEANING

- .1 Cure resinous flooring materials in compliance with manufacturer's directions, taking care to prevent contamination during stages of application and prior to completion of curing process. Close area of application for a minimum of 12 hours.
- .2 Protect resinous flooring materials from damage and wear during construction operation. Where temporary covering is required for this purpose, comply with manufacturer's recommendations for protective materials and method of application. Provide protection and cleaning of surfaces after final coats.

3.5 CLEANING

- .1 Provide in accordance with Section 01 74 11 - Cleaning.
- .2 Remove temporary covering and clean resinous flooring just prior to final inspection. Use cleaning materials and procedures recommended by resinous flooring manufacturer.

3.6 SCHEDULE

- .1 As indicated.
