Solicitation Amendment 002 is raised to answer the following question:

Question 1:

1.4.1.4, DATA SHEET, and 2.2.13 There are several references to the steel base frame being sized for the next larger size of motor frame. Our pump selection requires a 4 pole motor and has a max power of 664.36HP and so would normally require a 700HP motor. The frame size for a 700HP 4-pole 4160V TEFC motor depends on the motor series being used. Please specify exactly what motor frame size the baseplate is to be sized for as there is detailed design that must be done in order to develop the quotation.

Answer 1:

Please note that the term “next larger size” refers to the motor horsepower, not the motor frame per se. **Example:** If the power calculation with the pump being proposed results to 664.36 HP (therefore a 700 HP motor), and one wishes to supply a 700 HP Teco-Westinghouse with base speed of 1200 RPM TEFC with frame no. 6808B, then we want the base frame (the common frame on which both the pump and the motor are mounted on) to be able to accommodate a 800 HP motor TEFC with frame no. 6808B. This may require to mount the 700 HP motor on shims or spacer block that can be removed when one wants to replace with a 800 HP motor.

All other Terms and Conditions remain unchanged.
