This Amendment #003 is raised to incorporate a revised Appendix 1 - Combined Price Form and to address questions.

Revised Appendix 1 – Combined Price Form

Previously issued Appendix 1 – Combined Price Form is replaced with **Appendix 1 – Combined Price Form, REVISED August 24, 2017**,

The Appendix 1 - Combined Price Form REVISED August 24, 2017 MUST be used when submitting your bid. Any bid submitted on a previous version of Appendix 1 – Combined Price Form will be considered non-compliant and therefore disqualified.

APPENDIX 1 - COMBINED PRICE FORM – Revised August 24, 2017

- 1) The prices per unit shall govern in establishing the Total Extended Amount. Any arithmetical errors in this Appendix will be corrected by Canada.
- 2) Canada may reject the bid if any of the prices submitted do not reasonably reflect the cost of performing the part of the work to which that price applies.

UNIT PRICE TABLE

The Unit Price Table designates Work to which a Unit Price Arrangement applies.

- (a) Work included in each item is as described in the referenced specification section.
- (b) The Price per Unit shall not include any amounts for Work that is not included in that unit price Item.

	Class of Labour, Plant or Material	Unit of Measure-ment	Estimated Quantity (EQ)	Price per Unit applicable taxes extra (PU)	Extended amount (EQ x PU) applicable taxes extra
1	Pre-Mobilization Submittals	Lump Sum	1		
2	Mobilization	Lump Sum	1		
3	Site and Ground Surface Preparation	Lump Sum	1		
4	Traffic Control	Lump Sum	1		
5	Test Pitting	Hours	16		
6	Monitoring Well Decommissioning	Lump Sum	1		
7	Site Facilities Provision	Lump Sum	1		
8	Site Facilities Operation	Lump Sum	1		
9	Temporary Site Fencing	Lineal meter	925		
10	Survey	Lump Sum	1		
11	Standby Time	Day	1		
12	Waste Oversize Debris Removal and Disposal. Includes Concrete and metal	Cubic Meters	10		
13	Access Road Maintenance	Lump Sum	1		
14	Water Management – Equipment	Lump Sum	1		
15	Water Management—Disposal	Litres	5000		
16	Contaminated Material (Waste Quality) – Excavate, Transport (to LTF), Place	Cubic Meters	8520		
17	Non-Contaminated Material (including Overburden, Topsoil, Inert Debris)-- Excavate, Transport (200 m), Stockpile	Cubic Meters	9650		
18	Hazardous/Special Waste Soil -- Excavate, Transport (off-Site)	Cubic Meters	10		
19	Metals Impacted Soil -- Excavate, Transport (off-Site)	Cubic Meters	10		
20	Purchase and Install Recontamination Prevention Liner	Square Meters	1400

	Class of Labour, Plant or Material	Unit of Measure-ment	Estimated Quantity (EQ)	Price per Unit applicable taxes extra (PU)	Extended amount (EQ x PU) applicable taxes extra
21	Purchase and install Geotextile	Square Meters	1400		
22	Backfill – Imported from Land Treatment Facility	Cubic Meters	4800		
23	Backfill – Imported from Off-Site	Cubic Meters	3740		
24	Backfill – Overburden and Topsoil	Cubic Meters	9650		
25	Disposal – Special Waste	Tonnes	20		
26	Disposal – Metals Impacted Soil	Tonnes	20		
27	Site Restoration	Lump Sum	1		
28	Demobilization	Lump Sum	1		
29	Closeout Submittals	Lump Sum	1		
	For Land Treatment Facility				
30	Land Treatment Facility Preparation	Lump Sum	1		
31	Fertilizer Supply and Application (LTF)	kg	500		
32	Water Supply and Application (LTF)	Cubic meters	200		
33	Tractor Operation (LTF)	Hours	140		
34	Soil Flipping with Excavator (LTF)	Hours	140		
35	Soil Relocation from Cell to approved Storage Area (LTF)	Cubic Meters	4250		
36	Soil Sampling with backhoe/excavator (LTF)	Hours	20		
37	Construct Access to highway in accordance with permit conditions	LS	1		
38	Removal and Disposal of asbestos containing material	Kg	50		
TOTAL BID AMOUNT Excluding GST					

Notes:

n/a – Not Applicable

LS – Lump Sum

Per day – based on a 10-hour working day. If additional hours are worked, the charges for each additional hour will be pro-rated based on the “per day” (9 hour working day) rate.

Questions and Answers

Q1: Do you have the groundwater flow rates for the site, in particular AEC 32B?

A1: *Unless perched saturated soil zones are intercepted during the excavation it was assumed that the majority of the water encountered would be weather related precipitation. The infiltration rate will be dependent upon the contractors work methodology and management of overland flows. The tender package was prepared based on the assumption that the contractor would have adequate knowledge on how to manage infiltration and would assign the appropriate resources as required.*

Q2: Items 30 – 37 in the Unit price table; Are these items relevant to the material that is currently in the LTF or to material that we will place in the LTF?

A2: *The intent is to treat contaminated soil coming from AEC 32.*

Q3: Section 1.1.12 of the Specifications; Is any asbestos containing material anticipated in the remedial excavations?

A3: *Asbestos containing material has not been encountered during recent investigative drilling, but there is a possibility that asbestos-containing pipe associated with historical activities on the Site may be encountered during excavation.*

Q4: Section 1.1.27 of the Specifications; Site Restoration will include reinstating groundwater monitoring wells;. Is reinstatement of groundwater monitoring wells within the scope of works?

A4: *If the contractor damages wells during the excavation and site works the wells will need to be reinstated.*

Q5: Section 1.14.1 and 1.14.2 of the Specifications; Is a truck wash required on site? Are personnel decontamination units (minimum 2) required on site?

A5: *The truck wash will be required if the contractor cannot adequately limit tracking of soil from the work areas and onto access roads. Personnel decontamination will be required based on the contractor's health and safety requirements and proposed work methodology.*

Q6: With respect to the 1400 m2 of prevention liner to be installed, would overlaying joints be acceptable or would welding be required. If welding is required could the appropriate dimensions be provided for each excavation. This would be required to determine the lineal meters of weld.

A6: *The recontamination prevention liner is placed in panels. The panels must overlap a minimum of 0.5 m along the edge length. Welding of the panel seams is not required.*

Q7: The tender as part of site restoration requires the reinstallation of the monitoring wells. How many wells should we allow for?

A7: *The number of monitoring wells potentially impacted by the excavation, and requiring re-installment, can be determined by looking at Figures 3 through 7 of the AEC 32 Specifications. The contractor will have to consider all aspects of their proposed work flow to determine the areas affected by their operations. Preservation of the wells is preferred to reinstatement.*

Q8: Please provide a copy of the Permit referenced to Bid Item No. 37 'Construct Access to highway in accordance with permit conditions'.

A8: *The permit will require the contractor to construct a double lane access (8m wide at the top) spot at the location specified by Yukon Highways and Public Works. The access lane will require purchase and installation of a 400mm diameter culvert 14m in length. It is assumed that the access road ramp materials will require 600 cubic meters of a well graded granular material acceptable to Yukon Highways and Public works with 100% passing the 75mm sieve and less than 5% passing the 0.075mm sieve for the bulk of the fill, surfaced with (150 cubic meters) of a 450mm thick layer of crush granular material acceptable to Yukon Highways and Public works. The ramp must be compacted to 95% Modified Proctor maximum dry density.*

CCC No./N° CCC - FMS No./N° VME

The Land Use Permit for AEC 32 is attached for your reference. The contractor's proposed workplan must incorporate the attached Land Use Permit requirements and include the costs in the existing line item unit rates.

Q9: Please clarify the preparation work required at the LTF in accordance to Bid Item No. 30.

A9: *The preparation typically involves but is not limited to leveling the pile, removing any debris that may damage the disc harrow or cultivator, assisting the consultant with sample collection of the soil and sump water, and ensuring the access ramps are of adequate thickness of soil to support the proposed equipment.*

All other terms and conditions remain unchanged.
