A number of firms have requested Innovation, Science and Economic Development (ISED) Canada to provide representative sample data in order to better understand the kind of data that will be a part of the PRISM solution. This would allow the industry to potentially provide demonstrations of their software solutions using this dataset.

ISED will provide a sample dataset that has been collected from fixed monitoring sites in the Toronto area - Mount Nemo (Latitude: 43 23 48N Longitude: 79 51 51W) and Mississauga (Latitude: 43 38 49N, Longitude 79 41 55W). This data includes: the channel number, center frequency in MHz, Bandwidth (Hz), number of FFT Points, and Channel ID, Power (dBm), Carrier/Noise Ratio (dB) and Frequency Center Deviation (Hz) in the Ultra High Frequency (UHF) band from March 17, to July 1, 2017.

Any interested parties wishing to acquire this dataset to showcase their data visualization and analytics capabilities to ISED should contact Jeff Campbell at jeff.campbell@tpsgc-pwgsc.gc.ca.

Note: Interested parties agree that they will not disclose or use this dataset (or any subset thereof) except to the extent necessary to carry out the intended demonstrations and for no other purpose
