AMENDMENT 001 – Outdoor Resistive Load Bank, is being raised for the following reasons:

- 1. Amend paragraph 11 of Annex A – Requirement;**
- 2. Provide a response back from Public Works and Government Services Canada to questions received from bidders.**

-
1. REFER: Paragraph 11 of Annex A – Requirement

DELETE: in its entirety

INSERT: To include quick connects for highest rated capable amperage, minimum 1200A (Calculation: $1250\text{kVA} / (600\text{V} \times 1.73) = 1204\text{A}$), and to be split by 3x parallel runs of cable per phase.

2. QUESTION: Engineering has a concern on this spec regarding This points. Can you please clarify the request so we can continue this quote? We need to know the KW and volts at a minimum. Do you want any special control or step resolution?

ANSWER: As per para 4, it must be a 1.0MW @ 600V rated for continuous use. As per para 5, it must also be capable to operate at 480V and 208V, and as per para 6, it must be capable of single phase load testing as well. Load bank to be rated at 1.0MW (1000kW) @ 600V which gives 1204A. So if 1204A is applied to each of voltage requirements, we would get the following:

1000kW @ 600V (+/- 10kW)
800kW @ 480V (+/- 10kW)
346kW @ 208V (+/- 10kW)
115kW @ 120V (+/- 10kW)

In addition, the load bank must have a step resolution. Step resolution increments shall be within 5 – 10kW, and control will provide capability to program desired kW load setting, so as to bypass the 5 – 10kW increment setting (e.g. so user would not have to constantly increase increments by 10kW to reach a 1000kW load setting).

ALL OTHER TERMS AND CONDITIONS OF THIS SOLICITATION REMAIN UNCHANGED.

If your tender has already been forwarded and you wish to revise same, this revision should be faxed and reach the bid receiving area before the closing date. The tender number and the closing date are to be shown on the first page of your fax.
