

**This amendment 1 is raised to answer vendor's question:**

**Question:** As the rubber is a critical component of the assembly and the type of rubber required was not included in the specifications shown in the RFP, kindly advise the rubber's exact type and specification.

**Answer:** The requirement for the lining, i.e. the part in direct contact with the fuel, of the subject product is to be manufactured from nitrile rubber compound. The minimum lining thickness shall be 1.6mm [ref. DefStan 02-345].
