Annex A2 – Appendix B

Billing Detail Layout

The record layouts are:

Contract Total layout (Record Type-1): Only one per file and is the first record on file. Contains information and amounts for the invoicing period aggregated to the Contract level. (We currently only foresee 1 invoice per month, however the system will be set to accommodate more than one.)

Invoice layout (Record Type-2): Invoice summary record(s) for the Month against the Contract. The summary invoice (Type-2 record) will be for all charges during the invoicing period. A Type-2 record must be the sum of the total billable amounts of the Products / Services record layout (Record Type-3)" of the Invoicing period.

Detail Item Layout (Record Type-3): Item details under an invoice. All Type-3 records must immediately follow the Type-2 record. The Type-3 record must relate to a single detail item/service for all one-time, recurring and VoIP usage that was completed during or prior to the specific invoicing period. All records must contain any charges, adjustment charges and/or credits that are part of the invoice and/or related to the detailed item/service. The Type-3 records under each Type-2 will be sorted by 'Location/Site Code (105 - 132) and then 'Transaction Type' (65).
