This solicitation amendment 021 is raised for the following changes:

- Reminder of where the bids must be received
- New documents provided as attached files to the Technical Specifications

Reminder of where the bids must be received

Bidders are invited to take note that the Bid Receiving Office has recently moved to the ground floor of Place Bonaventure. Sealed tenders will be received in English or French at:

Public Works and Government Services Canada,
Place Bonaventure, 800 de la Gauchetière Street West,
Suite 1100 - opposite the entrance to the Bonaventure Hotel (close to the northwest gate),
Montreal, H5A 1L6

New documents provided as attached files to the Technical Specifications

In addition to the response to Q87 (see addendum # 020), a document presenting the revised appendix 39-1 has been added to *buyandsale.gc.ca* for download by bidders.

This file is named:

« R.057854_EN_Annex_39-1_DT_revision_20170919.pdf »

Notes :

- ⁽¹⁾ Canadian Water Quality Guidelines for the Protection of Aquatic Life
- ⁽²⁾ Surface water quality criteria in Quebec.
- ⁽³⁾ Selected effluent discharge objectives, notably based on preliminary environmental discharge objectives of the MDDELCC (April 2016).
- ⁽⁴⁾ For this parameter, the criterion varies with hardness and chloride concentration. See « Surface water quality criteria in Quebec » (MENV 2001).
- ⁽⁵⁾ For these metals, the criterion increases with hardness. See « Canadian Water Quality Guidelines for the Protection of Aquatic Life » (CCME).
- ⁽⁶⁾ For these metals, the criterion increases with hardness. See « Surface water quality criteria in Quebec » (MENV 2001).
- ⁽⁷⁾ For these metals, the criterion reduces with an adjustment factor applied to convert the quality criterion, which is expressed in total extractable metal, in dissolved metals. See « Surface water quality criteria in Quebec » (MENV 2001).
- ⁽⁸⁾ For this parameter, the criterion varies with pH according to the following formula: $c[1,005 \text{ (pH)} - 5,134] / 1000$. See « Surface water quality criteria in Quebec » (MENV 2001).
- ⁽⁹⁾ For this parameter, the criterion varies with pH according to the following formula: $c[1,005 \text{ (pH)} - 4,869] / 1000$. See « Surface water quality criteria in Quebec » (MENV 2001).
- ⁽¹⁰⁾ For this parameter, the criterion varies with temperature and pH of water. See appendix 2 of « Surface water quality criteria in Quebec » (MENV 2001).
- ⁽¹¹⁾ The quality criterion for total phosphorus aims at limiting the excessive growth of algae and aquatic plants in streams and rivers. The criterion for total phosphorus is applied on a case-by-case basis in order to account for specific conditions for streams and rivers in which groundwater seeps. Please consult with the DSEE of the Ministry.
- ⁽¹²⁾ In clear water (i.e. when suspended solids are < 25 mg/L), this criterion is defined by a maximal increase of 25 mg/L in comparison to the natural or ambient concentration (not influenced by a local source of suspended solids, by a significant rain event or snowmelt) according to context. In turbid water (i.e. when suspended solids are > 25 mg/L), this criterion is defined by either (under revision): a) a maximal increase at all times of 25 mg/L in comparison to the ambient concentration when the latter varies between 25 and 250 mg/L; or b) a maximal increase of 10 % in comparison to the ambient concentration when the latter is above 250 mg/L at a given moment.
- ⁽¹³⁾ In clear water (i.e. when suspended solids are < 25 mg/L), this criterion is defined by a maximal increase of 5 mg/L in comparison to the natural or ambient concentration (not influenced by a local source of suspended solids, by a significant rain event or snowmelt) according to context. In turbid water (i.e. when suspended solids are > 25 mg/L), this criterion is defined by either (under revision): a) a maximal increase at all times of 25 mg/L in comparison to the ambient concentration when the latter varies between 25 and 250 mg/L; or b) a maximal increase of 10 % in comparison to the ambient concentration when the latter is above 250 mg/L at a given moment.
- ⁽¹⁴⁾ This quality criteria applies to the un-ionized fraction of hydrogen sulfide (H2S). This fraction can be estimated from the average pH of the receiving environment and the dissolved (or total) sulfide concentration (expressed as S-2) of the water sample. See « Surface water quality criteria in Quebec » (MENV 2001).
- ⁽¹⁵⁾ This quality criteria varies with chloride concentrations in surface water in which groundwater seeps. See « Surface water quality criteria in Quebec » (MENV 2001) and consult the DSEE.
- ⁽¹⁶⁾ For this parameter, the criterion increases with chloride concentrations in the water environment. See appendix 8 of « Surface water quality criteria in Quebec » (MENV 2001).
- ⁽¹⁷⁾ Objectives based on the limits for effluent discharge total concentration in the Regulation respecting pulp and paper mills (RLRQ, c. Q-2, r. 27).
- ⁽¹⁸⁾ No objective is given for this parameter but monitoring is required in order to interpret toxicity testing.
