This Amendment 002 is raised to provide answers to Bidder's questions.

Question 1a.

Mandatory Criterion 8

What will the SD/HD-SDI outputs be used for (i.e. Multiscreen confidence monitoring? Connect to VTR, router, monitor, etc.?)

Answer:

The SD/HD-SDI outputs will be used to connect to broadcast reference monitors for confidence viewing or HD-SDI signal analyzers. These feeds may also be patched through an SDI router for distribution to multiple devices in the LAC video lab.

Question 1b.

Mandatory Criterion 8

How soon after ingest do files need to be output via SDI?

Answer:

There is no defined requirement dictating how quickly ingested files need to be available for playback, however any additional processing time required to close the lossless JPEG2000 MXF master and H.264 proxy files should not delay setup and migration of the next analog tape being digitized.

Question 1c.

Mandatory Criterion 8

Are 6 simultaneous SDI outputs required?

Answer:

Please see M1. During ingest, simultaneous live monitoring of all six (6) independent streams must be possible. This requirement also extends to the playback of previously encoded files; if all six (6) streams of capacity were available, they could be configured to provide playback of previously encoded files. If any one of the six (6) independent streams of capacity is busy performing an ingest, then it can be unavailable for a playback operation.

Question 2.

Mandatory Criterion 9

Will the RS422 devices be anything other than VTR decks?

Answer:

The RS422 devices will be videotape VTR's that support the interface.

Question 3.

Mandatory Criterion 13

Please elaborate on what is meant by "XML Profiles", and the use case.

Answer:

Criterion M12 outlines the minimum basic information that needs to be included in an .XML metadata file generated by the solution describing the files created during an ingest operation. Criterion M13 requires that the solution provide a means for the data included in an .XML file created during an ingest operation to be customized. For example, additional fields of collected information could be added or removed. This customization capability can either be included as functionality directly available to the end user or

the required customization can be performed by the vendor when requested by LAC as part of ongoing software support for the product.

Question 4.

Can the proposed ingest system be on the same physical network as the Telestream Vantage system?
Or is the intent to have them on separate networks

Answer:

Discussion of existing infrastructure at LAC not outlined in the statement of requirements or contract documentation is out of scope. The proposed solution must be able to meet all mandatory requirements within itself and cannot rely on any assumed undisclosed pre-existing infrastructure. Criteria M14 and M15 require that the solution provide 1Gb and 10Gb network connectivity. All component parts of a proposed solution will be mounted on the same network and addressable to each other, as well as the greater pool of networked resources available to the LAC video lab.

***** All other terms and conditions remain unchanged.*****
