Please amend the above mentioned bidding solicitation with the changes here below.

Item 1 – Painting

Question 1:

It appears that the “acrylic polymer mortar” that is listed to be used for the tank coatings in the specification is much more expensive than the standard epoxy coatings that we generally use for tank coatings. Adding to this a fairly significant delivery time & delay that could affect the schedule. Is it possible to substitute these tank coatings with standard marine grade epoxy coatings as per the standard application process that we carry out on other CCG vessels?

In addition, it appears that the shipyard will also have to bring in and use the manufacturers’ painters for the application of these tank coatings. This would pose a problem for some yards and also cause the price to raise significantly.

Answer 1:

The long term savings in performance, durability, reduced maintenance and reduced PPE costs in using the specified coating far outweigh any added initial application costs if applied correctly which can only be guaranteed by a manufacturer’s authorized applicator. Lead time for delivery to be confirmed by the manufacturer. Use of an epoxy resin based coating is in noncompliance with applicable MOHS and COHS regulations when it can be replaced by a less hazardous or non-hazardous substitute such as the specified coating.

Item 2 – Item 20 – Bow thruster hydraulic fluid change, of the Technical Statement of Requirement of the Invitation to Tender

Question 2:

Regarding the bow thruster hydraulic fluid change, can you please specify what type of filter is required?

Answer 2:

PARKER Filter 937918 RU “or equivalent” suitable for this application.

Item 3 – Items 20.3.09 and 20.3.10, of the Technical Statement of Requirement of the Invitation to Tender

Eliminate Item 20.3.9 and 20.3.10 as the valve is already replaced.

All other terms and conditions of the invitation to tender remain the same.
