SOLICITATION AMENDMENT 001

THE FOLLOWING AMENDMENT TO THE BID DOCUMENTS IS EFFECTIVE IMMEDIATELY. THE
AMENDMENT SHALL FORM A PART OF THE RESULTING CONTRACT DOCUMENTS.

REQUEST FOR PROPOSAL AND STATEMENT OF REQUIREMENTS:

Please delete all references to a safety factor of 5 and replace with the following:

The crane safety factor shall comply with The Canada Shipping Act, 2001 – Cargo, Fumigation and Tackle Regulations, either 317 (1) (a) or alternately 317 (1) (b) as per the regulations, rules or codes of a classification society.

QUESTIONS AND ANSWERS:

Q1. In Part 3-3.8 it is stated that a load cell is required. Would it be sufficient for the crane to include a display showing current load on the winch expressed as a percentage of maximum winch capacity?

A1. This would be acceptable.

Q2. Item 1.1 & 2.1: When reference is made to "Classification Society Approved Cranes" we would believe that a Type Approval for the crane model acceptable. We know that this is acceptable to Transport Canada Marine Safety as we have verified this previously.

A2. A type approval is not acceptable. The supplied crane must be fully approved during the manufacturing and testing process for the individual serial number.

Q3. Item 2.3 a: Can the current Load Moment be provided to which the foundation shown on drawing 2925-01-00 is designed? We assume that it is at least 185kNm as per item 3.1, but may have been designed to a higher capacity.

A3. It is not available and it cannot be confirmed that it was designed to a higher capacity. This would be the supplier's responsibility. See 2.3 a & b.

Q4. With Classification society approval requirements as per Item 1.1 & 2.1 the load rating of any crane will reduce by approximately 20%. Is the requirement for 2160Kg at 8.2m or for a HIAB201-2, or equivalent, as with de-rating to meet classification society requirements a HIAB201-2, or equivalent, will produce approximately 20% less capacity.

A4. De-rating is not acceptable. The crane must meet the performance requirements listed, see Part 3 - Operational Requirements.

CCC No./N° CCC - FMS No./N° VME

Q5. Item 2.3 b: As there is a requirement to have classification society approval for the existing foundation, can information be provided regarding the below deck structure and any available drawings.

A5. Provided with drawing 2925-01-11. Deck beams, frames, sizing and spacing provided.

Q6. Item 4.3: There is a listed requirement that the Hydraulic Power unit shall be mounted within the crane base as per the existing locations of the hydraulic power units within the HIAB 201-2 Seacranes. We have reviewed the information on HIAB Seacrane HPU assemblies and these units would normally have a standalone deck or below deck hydraulic power unit. Can information on the crane base mounted HPU be provided to allow us to provide a like for like unit.

A6. See performance data from 'Hiab 201-2 Technical Sheet.'

Q7. In Clause 2.3 is the requirement to fulfill either of Item a) **or** Item b)?

A7. Yes, one or the other.

Q8. Clause 3.5 requires a winch of the TC2 or equivalent. The TC-2 full drum line pull will be less than the cranes lifting capacity at maximum horizontal outreach. Is a larger winch model acceptable?

A8. Yes, so long as it meets minimum requirements of 3.5.1-3.5.4.

All other terms and conditions remain unchanged.
