

Answers (A) to questions (Q) from Industry:

Q: Regarding item #8: the GHD and the reverse hyperextension are normally 2 separated machines. Are you looking for one that could do both the GHD and the reverse hyperextension or are you only looking for the reverse hyperextension? Can you give one example of a specific model that would be acceptable?

A: Item #8 must be a combination machine. An example is the Sorinex FrankenHyper.
