

This amendment 1 to solicitation no. W6369-18-X014 is raised to answer the following question:

Question 1:

"We are [...] and would be interested to know more about the Parabolic Antenna Wideband Feed Mount Structure.

Is it a pre manufactured standard support pole or the is some custom structural steel component involved ?"

Answer 1:

Our requirement does not include a support pole or structural components. Our requirement is for linear polarized ultra-wideband parabolic antenna feeds that must have a mounting structure that is matched to the mounting hole positions on our existing 2-ft, 3-ft and 4-ft reflector antennas used in radio frequency/microwave free space radiation system. These antenna feeds are specialized equipment that must meet all the requirements in the Statement of Requirement attached as an annex to the solicitation document, which include performance requirements.
