Canada seeks to establish a three (3) years National Individual Standing Offer (NISO) with the possibility to extend the period up to two (2) additional one-year periods.

Offerors who submit an offer agree to be bound by the instructions, clauses and conditions of the RFSO and accept the clauses and conditions of the Standing Offer and resulting contract(s).

1.2 National Building Code 2015

Shelters must be designed and constructed to meet or exceed the requirements of the National Building Code 2015. Due to the small size of the building, Part 9 (Housing and Small Buildings) should be used for all building systems including:

- a. The clear span of any structural member may not exceed 12.2 metres (9.4.2.1.c);
- b. Barrier-free design is not required as the shelter is not intended to be occupied on a daily or full-time basis (3.8.1.1 and 9.5.2.1);
- c. Minimum ceiling height = 2.1 metres for minimum 10.0 m² of floor space (9.5.3.1);
- d. Occupancy classification = Group C - residential (9.10.2.1);
- e. Combustible construction permitted, no fire ratings required;
- f. No fire separation is required for fuel-fired appliances (9.10.10.4);
- g. Except for doors, the exposed surface of every interior wall and ceiling, including skylights and glazing, shall have a surface flame-spread rating of not more than 150;
- h. Ventilation (9.32); and
- i. Operable windows with a minimum unobstructed area of 0.28 m² is required for natural ventilation during the non-heating season (9.32.2.2).

2. SITE REQUIREMENTS AND RESTRICTIONS

Locations for the backcountry shelters are difficult to access – without services, roads, or heavy equipment. It is anticipated that a Twin Otter airplane, helicopters or boat will be used to transport shelters or shelter components from the nearest landing strip or port to each site.

- a. Shelters must be capable of breaking down into modular components to fit within small aircraft, heli-slung or boat to their destinations;
 - i. Twin Otter Plane: A Twin Otter has the maximum cabin cargo length of 5.61 m, height of 1.5 m, width of 1.75 m, area of 10.87 m and a door size of 1.27 x 1.42 m with a maximum load capacity of 2,000 lbs (907 kg).
 - ii. Helicopters: The type of helicopters generally available for use in the northern national parks is either a Bell 206 with a maximum external load (cargo hook limit) of 2,000 pounds (907 kg) or a Eurocopter AS350 B2 A-Star with a similar external load capacity of 2,200 pounds (998 kg).
- b. Each modular component must not exceed 200 lbs;
- c. Shelter components should be able to withstand extreme cold, wind, snow, UV light and damage from wildlife (e.g. Polar Bears and Wolverines). Extreme winds in some locations may require the use of guy-lines to help support the shelter structure;
- d. Shelters should use as few components as possible to enable quick and easy assembly on site without nails and staples, using basic tools that do not require 120V to operate, and to avoid complicated long term maintenance;
- e. Priority will be given to practicality, simplicity and ease of maintenance; and
- f. Shelters must provide the option to be easily disassembled and moved to other locations.

1.1 Firm Unit Prices – Additional Periods (Option)

The Contractor agrees that for each additional period of the RFSO, if exercised, the firm unit prices (increased or decreased) will be adjusted in accordance with the average Consumer Price Index (CPI) published by Statistics Canada (all items) for Canadian municipalities, for the municipality closest to the Contractor's main operations. The adjustment will be made annually, when the RFSO is extended, based on the average CPI of the most recent 12-month period using the previous year's firm unit prices.
