Items identified as "proprietary" will be treated as such except where Canada determines that the enquiry is not of a proprietary nature. Canada may edit the question(s) or may request that the Bidder do so, so that the proprietary nature of the question(s) is eliminated, and the enquiry can be answered to all bidders. ## ANNEX "A" STATEMENT OF WORK

### 1.0 Scope

#### 1.1 Title

##### **Pacific Herring Survey off the British Columbia Coast**

#### 1.2 Contracting Period

Contract Award through to November 30, 2018 with the possibility of one (1) additional option year, at the discretion of Fisheries and Oceans Canada

Option year if exercised will be December 1, 2018 through to November 30, 2019.

Project work to take place between January and May including option year if exercised

#### 1.3 Introduction

Department of Fisheries and Oceans (DFO) Canada intends to conduct a data collection program for Pacific Herring (*Clupea pallas*) covering the five major and two minor assessment regions on the British Columbia coast.

#### 1.4 Estimated Value

The total value of any contract emanating from this RFP shall not exceed \$1,359,000.00 in 2018 and \$1,386,200 in 2019 (excluding applicable taxes), and must include all survey costs associated with vessel, crew, transportation, fuel, travel, living expenses, and research activities.

#### 1.5 Objectives of the Requirement

Two objectives for the Pacific Herring Survey program are as follows:

Objective #1 is to measure herring spawn deposition (eggs) through SCUBA dive surveys or surface surveys (as described below) in some or all (as needed) of the five major stock assessment regions (Haida Gwaii, Prince Rupert District, Central Coast, Strait of Georgia and the West Coast of Vancouver Island) and two minor regions (Area 2W and Area 27);

Objective #2 is to obtain biological samples from pre-spawning aggregations of Pacific Herring using purse seine vessels in some or all (as needed) of the following major stock assessment regions: Haida Gwaii, Prince Rupert District, Central Coast, Strait of Georgia and the West Coast of Vancouver Island, and minor region Area 2W. DFO Science uses data from these programs in the annual stock assessment process for Pacific Herring.

## 1.6 Background, Assumptions and Specific Scope of the Requirement

DFO Science assesses British Columbia Pacific Herring stocks annually. Stock assessment uses an age-structured assessment model requiring annual updates of proportions at age, weight at age, and spawn survey data. Data collected through the Pacific Herring Survey Program, described in this Statement of Work are used by stock assessment scientists to assess the biomass of herring stocks, and provide annual biomass forecasts to Fisheries Management, information which is then used in the annual Integrated Fisheries Management Plan process for BC Pacific Herring.

## 2.0 Requirements

The Contractor shall carry out the Pacific Herring stock assessment survey to conduct assessments of herring egg deposition and obtain biological samples on (up to, as needed) all spawning grounds in support of stock assessment.

The dive and surface surveys of herring spawn will be conducted in the areas indicated in List of Activities – Part A and the collection of biological samples from pre-spawning aggregations of Pacific Herring stocks will be conducted in the areas indicated in List of Activities – Part A.

### 2.1 Tasks, Activities, Deliverables and Milestones

**Total points: 75 points max**

**COST EVALUATION (total maximum of 100 points)**

Of those proposals determined to be technically responsive, the lowest cost proposal, based on the pricing table in the statement of work, will be awarded the maximum number of points assigned for cost (100 points). The points for cost for the remaining technically responsive proposals will be allocated on a pro-rata basis.

**BASIS OF SELECTION: Rated Requirements is worth 70% & Cost Evaluation is worth 30%**

The compliant bidder with the highest combined rated criteria points (70%) and price points (30%) shall be selected as the bidder providing best value.

1. To be declared responsive, a bid must:
  - a. comply with all the requirements of the bid solicitation; and
  - b. meet all mandatory criteria; and
  - c. obtain the required minimum of 10 points overall for the technical evaluation criteria which are subject to point rating.
2. Bids not meeting (a) or (b) or (c) will be declared non-responsive.
3. The selection will be based on the highest responsive combined rating of technical merit and price. The ratio will be 70% for the technical merit and 30% for the price.
4. To establish the technical merit score, the overall technical score for each responsive bid will be determined as follows: total number of points obtained / maximum number of points available multiplied by the ratio of 70%.
5. To establish the pricing score, each responsive bid will be prorated against the lowest evaluated price and the ratio of 30%.
6. For each responsive bid, the technical merit score and the pricing score will be added to determine its combined rating.
7. Neither the responsive bid obtaining the highest technical score nor the one with the lowest evaluated price will necessarily be accepted. The responsive bid with the highest combined rating of technical merit and price will be recommended for award of a contract.

The table below illustrates an example where all three bids are responsive and the selection of the contractor is determined by a 60/40 ratio of technical merit and price, respectively. The total available points equal 135 and the lowest evaluated price is \$45,000 (45).

**Basis of Selection - Highest Combined Rating Technical Merit (60%) and Price (40%)**
