Solicitation Amendment No. 007 is being issued to address the following Question and Answer:

Q1: I understand that at amendment was issued this morning and as such would like to look for one quick clarification.

Amendment 004, A7 and A12 states SDI-12 protocol is the only interface to be supported or used. As SDI-12 does not have a requirement for transmitted text strings can Canada confirm that Item 7 in Table 1.1 from Annex D (Weather station's text string data output must be configurable from 1 to 3600 seconds inclusively.) is no longer applicable and will be removed?

A1: ECCC accepts Weather Station that does not push the weather data on its SDI-12, however there must be a clear instruction on how to access any individual data field. ECCC's requirement is to access all the weather data within the Weather Station every second. The vendor must demonstrate that with the request of datalogger, the entire data field is accessible within a second period

Q2: Amendment 004 Table 1 point 17 Precipitation Amount (Daily) asks for +/- 5% Minimum Achievable measurement uncertainty. Not all manufactures list this specification in the same way and the CWSU that we would like to bid uses a radar technology and as such specifies repeatability with a specification of 90%. Would Canada accept this as technically compliant?

A2: Canada will accept 90% repeatability of precipitation amount

ALL OTHER TERMS AND CONDITIONS REMAIN THE SAME.
