

**Innovative Solutions Canada Program**

**Challenge EN578-170003/03: Robust “Beyond Line of Sight” (BLOS) Communications in Satellite-Denied Environments**

**Amendment 003**

This amendment is raised to answer bidder questions.

**Question #8**

Would the government agency be able to supply existing equipment to use as a prototype platform for Phase II prototype development (as it would be a significant direct benefit to have the prototype application running on an existing DRDC platform that has relevant strategic and practical importance)?

**Response #8**

A bidder may request to use government supplied equipment in its Phase 2 proposal for consideration of the sponsoring department. The request will be considered during the contract negotiation stage. Bidders should propose an alternative work plan in their proposal if the government supplied equipment is not provided.
