WINTER NURSERY SERVICES - Chile**BACKGROUND :**

Agriculture & Agri-Food Canada's (AAFC) Research Stations located at Lacombe and Lethbridge in Alberta, Indian Head, Saskatoon and Swift Current in Saskatchewan; Brandon, Morden and Winnipeg in Manitoba and Ottawa, Ontario co-ordinate winter nursery services for AAFC plant breeders in the Americas. Current users of the winter nursery service include AAFC plant breeders of flax, barley, peas, wheat and oats.

This winter nursery is an ongoing plant breeding research program in Chile. The soil and climatic conditions (October to March) are similar to summer growing conditions in Canada. The timing of harvest in Chile permits early seed shipment to Canada, a critical concern to the nursery users, as it permits preparation of experiments for spring planting within a very narrow time frame. Natural levels of disease infection permit selection for genetic resistance to several diseases of economic importance in Canada.

Plant breeding winter nurseries are used by AAFC plant breeders to gain an extra generation of seed production and selection each year. This significantly reduces the time from the initial cross between parent lines to the production of a finished crop variety by up to four years. The use of field planted winter nurseries in areas of the southern hemisphere provides a substantial cost benefit to users in comparison to the operation of greenhouses and plant growth chambers.

The winter increase facilities are used by AAFC plant breeding programs to hasten the commercialization of new crop varieties or to recover from crop failures experienced during the preceding growing season. The use of winter nurseries also affects commercial pedigreed seed production by facilitating the introduction of improved varieties in a timely manner, an important consideration in today's competitive market.

OBJECTIVES :

AAFC requires the services of an Offeror to plant, manage and harvest cereals (wheat, durum, barley and oats), flax, and peas experimental lines to specified quantities and purity standards for individual AAFC plant breeding programs and to plant, manage, harvest and condition pure seed, bulk planted pedigreed increases of cereal, oilseed and pulse lines or varieties to standards equivalent of Canadian Breeder Seed.

The services include arranging phytosanitary inspection/certification and other documentation for all seed shipped to Canada and delivery of the packaged seed to a commercial shipping agent in Chile.

SCOPE OF WORK :

1. The Offeror must plant the nurseries within seven (7) days of receipt of the seed from AAFC in October or early November, weather permitting.
2. The Offeror is required to:
(These items correspond with Annex F)
 - A1) plant, manage, and harvest cereal, pulse, and oilseed lines from experimental individual AAFC plant breeding programs as 2.5 to 3 m centre rows
 - A2) plant, manage, and harvest cereal, pulse, and oilseed lines from experimental individual AAFC plant breeding programs as 5 m centre rows
 - A3) plant, manage, and harvest cereal, pulse, and oilseed lines from experimental individual AAFC plant breeding programs as 10 m centre rows
 - A4) plant, manage and harvest cereal, pulse and oilseed lines as multi-seed hills
 - A5) plant, manage and harvest cereal, pulse and oilseed lines as single-seed hills
 - A6) plant, manage, harvest and condition pure seed, non-pedigreed increases of cereal, pulse and oilseed lines as bulk plots planted with a quantity of seed (eg. 500 g) for maximum increase. Each plot shall have a minimum area of 100 m² and maximum area of 150 m² with a target yield of 70-90 kg.
 - A7) plant, manage, harvest and condition bulk-planted pedigreed increase plots of cereal, pulse and oilseed lines or varieties to standards equivalent to Canadian Breeder Seed (Organization for Economic Co-operation and Development (OECD) Pre-Basic) standards. This shall include application for and obtaining field crop inspection, seed analyses for grade, purity, germination and phytosanitary certification and the acquisition of an Association of Official Seed Certifying Agencies (AOSCA) or equivalent.

Upon request the Offeror must provide :

- A8) various threshers, sample cleaners, a drying system and related facilities for harvest operations performed by AAFC staff
- A9) casual support labour to assist AAFC staff with selection, roguing or harvest of winter nurseries
- A10) skilled technical labour to gather agronomic or disease reaction data during the winter increase growing season from specified AAFC plant breeding material

The Offeror will also provide:

- A11) pallets on which to ship boxed or bagged seed
- A12) Mini-cage: 1 m² - Pollinator (bee or flies) will be provided in each isolation tent to ensure cross-pollination. Each line in the isolation tent shall be bulk harvested and conditioned to prevent cross-contamination among lines.

A13) Cage: 10 - 34 m² - Pollinator (bee or flies) will be provided in each isolation tent to ensure cross-pollination. Each line in the isolation tent shall be bulk harvested and conditioned to prevent cross-contamination among lines.

3. The Offeror must apply supplemental irrigation as necessary to ensure proper growth and development of the winter nursery.
4. On a case by case basis, the Offeror must provide and apply fungicides as requested by AAFC for the control of foliar and seed borne diseases. These applications will be timed so as not to interfere with the selection for genetic resistance to diseases of economic interest in Canada as are endemic to the winter nursery location.

RETURN PACKING / SHIPPING INSTRUCTIONS :

The Offeror must package all small lots of the harvested seed in sealed, leak proof bags or envelopes. These bags and envelopes must be made of paper or perforated plastic to facilitate seed dry down.

The Offeror must package all large lots of the harvested seed in woven nylon sacks.

The double walled cardboard boxes must be loaded on stackable plastic pallets to a maximum of one meter in height.

All double walled cardboard boxes must be secured to the plastic pallets using plastic strapping, edge protectors and strap guards. Anti-slip paper must be placed between each layer of double walled cardboard boxes. The plastic pallets must have 4-way forklift access, be International Standards for Phytosanitary Measures No. 15 exempt for shipping, and have a flat base to distribute the weight evenly.

If pedigreed seed is loaded in bulk bags, the bulk bags must be gusseted, fitted with edge protectors and strapped to stackable plastic pallets with 4-way forklift access.

The maximum weight per pallets must not exceed:
