AMENDMENT 002

This amendment is being issued to answer the following questions that have been raised and to make two corrections to Part 6, Resulting Contract Clauses.

Question 1: Would you be able to advise if a system voltage of 220 Volts AC is also acceptable?

Answer 1: Yes, 220 Volts AC is also acceptable.

Question 2: Due to the fact that this request is for RO unit making 500gpd at very low temp (0C) it would be necessary to include in our offering a heat exchanger to bring the sea water to suitable condition before entering to the RO. Would this be acceptable? Can we offer a heat exchanger along with the RO?

Answer 2: Yes, it is acceptable.

Question 3:

- a) Is the 300-500 gpd required for all temperature ranges?
- b) No Watermaker can make water with freezing water. Do you know a specific model?
- c) No Watermaker can survive in -35 degree weather. The membrane would fail. Do you know a specific model?

Answer 3:

- a) The building will be heated. However, when we are not there it will be winterized and sit at -35C when not in use.
- b) No, there is no specific model currently known
- c) No, there is no specific model currently known

Question 4: The feed pump with the system must be mounted below the water line on the vessel. This will allow for the rise and run parameter. Is it acceptable?

Answer 4: No, this is not acceptable. The Reverse Osmosis (RO) system is not intended to be a vessel in the water. The RO system is going to be kept in a building on land, and will only have a pump in the water.
