1.1 SCOPE OF WORK .1 The work covered under this project consist of the furnishing of all plant, labour, equipment, hardware and materials for "New Marginal Boat Ramp 503", located at Cap-des-Caissie, Kent County, N.B., in strict accordance with Specifications and accompanying drawings and subject to all terms and conditions of contract.

1.2 DESCRIPTION OF .1 In general, work under this Contract shall consist of but not be limited to the following:

.1 The complete removal of existing treated timber ramp structure 501 as shown on drawings. This will include concrete deck and/slabs, timber and/or concrete wheelguard, wheelguard chocks, timber fenders and sheathing, treated timber cribwork, rock ballast, and all other items or services that interfere with the work as directed. The existing gate will be reinstalled on the new ramp. Removal of ramp will only be done once new ramp is complete.

.2 All excavated and un-recyclable backfill material including underwater excavated materials to limit of work will be stored on site as shown on drawings.

.3 The transportation and proper disposal of un-recyclable treated timber materials to an approved regional land fill site.

.4 The new ramp will be constructed in a dry environment using temporary dyke system. .5 Supply and installation of granular fill materials, geotextile, R50 random rip-rap, reinforcing concrete and asphalt pavement as shown on drawings.

.6 Carry out work as per Environmental requirements.

.7 Supply and installation of a floating boom/silt curtain surrounding the work area during work.

1.3 FAMILIARIZATION WITH SITE	.1	Before submitting a bid, it is recommended that bidders inspect and examine the site of work and satisfy themselves as to the form and nature of the work, materials, the means of access the site, and the temporary facilities required for completion of the work.
	.2	Obtain prior permission from the Departmental Representative before carrying out such site inspection.
	.3	Bidders are required to review the list of potential site hazards provided in Section 01 35 29.
	. 4	Bidders are required to wear all appropriate personal protective equipment and take all precautionary measures necessary to ensure their safety during any pre-tender site visit.
	.5	Contractor shall make own assessment of the site conditions, and the difficulties in carrying out the work as specified.
1.4 CODES AND STANDARDS	.1	Perform work in accordance with the National Building Code of Canada and any other code of provincial or local application including all amendments up to project tender closing date provided that in any case of conflict or discrepancy, the more stringent requirements shall apply.
	. 2	Materials and workmanship must meet or exceed requirements of specified standards, codes and referenced documents.
1.5 INTERPRETATION OF DOCUMENTS	.1	Supplementary to the Order of Precedence article of the General Conditions, the Division 01 Sections take precedence over the technical division sections of these

Specifications.

<u>1.6 TERM ENGINEER</u> .1 Unless specifically stated otherwise, the term Engineer when used in the Specifications and on the Drawings shall mean the Departmental Representative as defined in the General Conditions of the Contract.

- 1.7 SETTING OUT.1Assume full responsibility for and execute
complete layout of work to locations, lines
and elevations indicated.
 - .2 Provide devices needed to lay out and construct work.
 - .3 Supply such devices as straight edges and templates required to facilitate Departmental Representative's inspection of work.
 - .4 Supply stakes and other survey markers required for laying out work.
 - .5 Setting out the work, mob, demob, and other costs associated with the work but not included as part of specific bid items will be considered as incidental to the 'Site Work' lump sum bid item in section 01 74 21.

1.8 MEASUREMENT FOR .1 Notify Departmental Representative <u>PAYMENT</u> sufficiently in advance of operations to permit required measurements for payment.

- 1.9 DOCUMENTS.1Maintain at job site, one copy each of the
following:
 - .1 Contract Drawings
 - .2 Specifications
 - .3 Addenda
 - .4 Reviewed Shop Drawings
 - .5 List of outstanding Shop Drawings
 - .6 Change Orders
 - .7 Other modifications to Contract
 - .8 Field Test Reports
 - .9 Copy of Approved Work Schedule
 - .10 Health and Safety Plan and other safety related documents

1.2 WORK SCHEDULE

.6

(Cont'd)

- Bar (GANTT) Charts, indicating all work (Cont'd) .1 activities, tasks and other project elements, their anticipated durations, planned dates for achieving key activities and major project milestones supported with; .7 Work schedule must take into consideration and reflect the work phasing, and operational restrictions as indicated on drawings. Schedule work in cooperation with the .8 Departmental Representative. Incorporate within Work Schedule, items identified by Departmental Representative during review of schedule. Completed schedule shall be reviewed by .9 Departmental Representative. Take necessary measures to complete work within scheduled time. Do not change schedule without Departmental Representative's approval. .10 Ensure that all sub trades and subcontractors are made aware of the work restraints and operational restrictions specified. Schedule Updates: .11 .1 Submit when requested by Departmental Representative. Provide information and pertinent details .2 explaining reasons for necessary changes to implementation plan. .3 Identify problem areas, anticipated delays, impact on schedule and proposed corrective measures to be taken. .12 Departmental Representative will make interim reviews and evaluate progress of work based on most currant schedule. Frequency of such
 - reviews will be as decided by Departmental Representative. Address and take corrective measures on items identified by reviews and as directed by Departmental Representative. Update schedule accordingly.

Section 01 14 10 Page 3

2018-03-23

- 1.2 WORK SCHEDULE (Cont'd) .13 In every instance, change or deviation from the Work Schedule, no matter how minimal the risk or impact on safety or inconvenience to tenant or public might appear, will be subject to prior review and approval by the Departmental Representative.
- 1.3 OPERATIONAL <u>RESTRICTIONS</u> .1 The Contractor must recognize that Harbour activities and occupants will be affected by implementation of this Contract. The Contractor must perform the work with utmost regard to the safety and convenience of all Harbour users. All work activities must be planned and scheduled with this in mind. The Contractor will not be permitted to disturb any portion of the Harbour without providing temporary facilities as necessary to ensure safe and direct passage through disturbed or otherwise affected areas.
 - .2 Facility circulation maintained: .1 Ensure that entrances, roadways, loading zones and other circulation routes are maintained free and clear providing safe and uninterrupted passage for Facility users and public at all times during the entire Work.
- 1.4 PROJECT .1 Schedule and administer project meetings, held <u>MEETINGS</u> .1 Schedule and administer project meetings, held on a minimum bi-monthly basis, for entire duration of work and more often when directed by Departmental Representative as deemed necessary due to progress of work or particular situation.
 - .2 Notify participants 4 working days in advance of meeting date.
 - .1 Ensure attendance of all subcontractors.
 - .2 Departmental Representative will provide
 - list of other attendees to be notified.
 - .3 Hold meetings at project site or where approved by Departmental Representative.

Section 01 14 10 Page 4

1.5 WORK The General Contractor is responsible for .1 COORDINATION coordinating the work of the various trades and predetermining where the work of such trades interfaces with each other. .1 Designate one person from own employ having overall responsibility to review contract documents and shop drawings, plan and manage such coordination. Work Cooperation: .2 .1 Ensure cooperation between trades in order to facilitate the general progress of the work and avoid situations of spatial interference. .2 Ensure that each trade provides all other trades reasonable opportunity for the completion of the work and in such a way as to prevent unnecessary delays and the need to remove and replace completed work. No extra costs to the Contract will be .3 considered by the Departmental Representative as a result of Contractor's failure to

as a result of Contractor's failure to effectively coordinate all portions of the Work. Disputes between the various trades as a result of their not being informed of the areas and extent of interface work shall be the sole responsibility of the General Contractor to be resolved at his own cost.

<u>1.6 OTHER CONTRACTS</u> .1 Further contracts may be let during the period that this Contract is in progress.

- .2 Cooperate with other Contractors in carrying out their respective work and carry out all instructions from the Departmental Representative in this regard.
- .3 Connect properly and coordinate work with that of other Contractors.

 1.1 SECTION
 .1 Procedures to isolate and lockout electrical

 INCLUDES
 facility and other equipment from energy sources.

1.2 RELATED WORK .1 Section 01 35 29: Health and Safety

<u>1.3 REFERENCES</u> .1 CSA C22.1-2012 - Canadian Electrical Code, Part 1, Safety Standard for Electrical Installations.

- .2 CSA C22.3 No. 1-2010) Overhead Systems.
- .3 CSA C22.3 No. 7-2010 Underground Systems.
- .4 COSH: Canada Occupational Health and Safety Regulations made under Part II of the Canada Labour Code.
- 1.4 DEFINITIONS .1 Electrical Facility: means any system, equipment, device, apparatus, wiring, conductor, assembly or part thereof that is used for the generation, transformation, transmission, distribution, storage, control, measurement or utilization of electrical energy, and that has an amperage and voltage that is dangerous to persons.
 - .2 Guarantee of Isolation: means a guarantee by a competent person in control or in charge that a particular facility or equipment has been isolated.
 - .3 De-energize: in the electrical sense, that a piece of equipment is isolated and grounded, e.g. if the equipment is not grounded, it cannot be considered de-energized (DEAD).

SPECIAL PROCEDURES ON LOCKOUT REQUIREMENTS Section 01 35 25 Page 2

- 1.4 DEFINITIONS

 (Cont'd)
 .4 Guarded: means that an equipment or facility is covered, shielded, fenced, enclosed, inaccessible by location, or otherwise protected in a manner that, to the extent that is reasonably practicable, will prevent or reduce danger to any person who might touch or go near such item.
 .5 Isolate: means that an electrical facility, mechanical equipment or machinery is separated and discompared from examples of
 - mechanical equipment or machinery is separated or disconnected from every source of electrical, mechanical, hydraulic, pneumatic or other kind of energy that is capable of making it dangerous.
 - .6 Live/alive: means that an electrical facility produces, contains, stores or is electrically connected to a source of alternating or direct current of an amperage and voltage that is dangerous or contains any hydraulic, pneumatic or other kind of energy that is capable of making the facility dangerous to persons.
- 1.5 COMPLIANCE .1 Comply with the following in regards to <u>REQUIREMENTS</u> .1 Comply with the following in regards to isolation and lockout of electrical facilities and equipment: .1 Canadian Electrical Code

.2 Federal and Provincial Occupational Health and Safety Acts and Regulations.
.3 Regulations and code of practice as applicable to mechanical equipment or other machinery being de-energized.
.4 Procedures specified herein.

- .2 In event of conflict between any provisions of above authorities the most stringent provision will apply. Should a dispute arise in determining the most stringent requirement, Departmental Representative will advise on the course of action to be followed.
- <u>1.6 SUBMITTALS</u> .1 Submit copy of proposed lockout procedures and sample of lockout permit or lockout tags to Departmental Representative for review, within 14 calendar days after contract award.

- EXISTING SERVICES
(Cont'd)process in accordance with health and safety
requirements specified Section 01 35 29.1.8 LOCKOUTS.1De-energize, isolate and lockout electrical
facility, mechanical equipment and machinery
from all potential sources of energy prior to
working on such items..2Develop and implement clear and specific
 - .2 Develop and implement clear and specific lockout procedures to be followed as part of the Work.

Conduct hazard assessment as part of the

- .3 Prepare typed written Lockout Procedures describing safe work practices, procedures, worker responsibilities and sequence of activities to be followed on site by work force to safely isolate an active piece of equipment or electrical facility and effectively lockout and tag out it's sources of energy.
- .4 Include as part of the Lockout Procedures a system of lockout permits managed by Contractor's Superintendent or other qualified person designated by him/her as being "in-charge" at the site.

.1 A lockout permit shall be issued to specific worker providing a Guarantee of Isolation before each event when work must be performed on a live equipment or electrical facility.

.2 Duties of person managing the permit system to include:

- .1 Issuance of permits and lockout tags to workers.
- .2 Determining permit duration.
- .3 Maintaining record of permits and tags issued.

.4 Making a Request for Isolation to Departmental Representative when required as specified above.

.5 Designating a Safety Watcher, when one is required based on type of work..6 Ensuring equipment or facility has been properly isolated.

2018-03-23

1.8 LOCKOUTS (Cont'd)	.4	<pre>(Cont'd) .2 (Cont'd) .7 Collecting and safekeeping lockout tags returned by workers as a record of the event.</pre>
	. 5	Clearly establish, describe and allocate responsibilities of: .1 Workers. .2 Person managing the lockout permit system. .3 Safety Watcher. .4 Subcontractor(s) and General Contractor.
	.6	Generic procedures, if used, must be edited and supplemented with pertinent information to reflect specific project requirements. .1 Clearly label the document as being the Lockout procedures applicable to work of this contract.
	.7	Use energy isolation lockout devices specifically designed and appropriate for type of facility or equipment being locked out.
	.8	Use industry standard lockout tags.
	.9	Provide appropriate safety grounding and guards as required.
1.9 CONFORMANCE	.1	Brief all workers and subcontractors on requirements of this section. Stringently enforce use and compliance.
	. 2	Failure to follow lockouts procedures specified herein may result in the issuance of a Non-Compliance notification as specified in section 01 35 29.
1.10 DOCUMENTS ON SITE	.1	Post Lockout Procedures on site in common location for viewing by workers.
	.2	Keep copies of Request for Isolation forms and lockout permits and tags issued to workers on site for full duration of Work

1.12 HEALTH AND SAFETY PLAN (Cont'd)	.3	(Cont'd) .5 Harmonize Plan with Facility's Emergency Response and Evacuation Plan. Departmental Representative will provide pertinent data including name of Departmental Representative and Facility Management contacts.
	. 4	<pre>On-site Communication Plan: .1 Procedures for sharing of work related safety information to workers and subcontractors, including emergency and evacuation measures. .2 List of critical work activities to be communicated with Facility Manager which have a risk of endangering health and safety of Facility users.</pre>
	.5	Address all activities of the Work including those of subcontractors.
	. 6	Review Health and Safety Plan regularly during the Work. Update as conditions warrant to address emerging risks and hazards, such as whenever new trade or subcontractor arrive at Work Site.
	.7	Departmental Representative will respond in writing, where deficiencies or concerns are noted and may request re-submission of the Plan with correction of deficiencies or concerns.
	. 8	Post copy of the Plan, and updates, prominently on Work Site.
1.13 SAFETY SUPERVISION	.1	Employ Health & Safety Site Representative responsible for daily supervision of health and safety of the Work.
	.2	Health & Safety Site Representative may be the Superintendent of the Work or other person designated by Contractor and shall be assigned the responsibility and authority to: .1 Implement, monitor and enforce daily compliance with health and safety requirements of the Work

DFO/SCH New Boat Ramp Structure 503 Cap des Caisie, NB P/N 722234

1.13 SAFETY SUPERVISION (Cont'd)	.2	<pre>(Cont'd) .2 Monitor and enforce Contractor's site-specific Health and Safety Plan3 Conduct site safety orientation session to persons granted access to Work Site4 Ensure that persons allowed site access are knowledgeable and trained in health and safety pertinent to their activities at the site or are escorted by a competent person while on the Work Site5 Stop the Work as deemed necessary for reasons of health and safety.</pre>
	.3	Health & Safety Site Representative must:.1 Be qualified and competent person in occupational health and safety..2 Have site-related working experience specific to activities of the Work..3 Be on Work Site at all times during execution of the Work.
	.4	All supervisory personnel assigned to the Work shall also be competent persons.
	.5	Inspections: .1 Conduct regularly scheduled safety inspections of the Work on a minimum bi-weekly basis. Record deficiencies and remedial action taken.
1.14 TRAINING	.1	Use only skilled workers on Work Site who are effectively trained in occupational health and safety procedures and practices pertinent to their assigned task.
	.2	Maintain employee records and evidence of training received. Make data available to Departmental Representative upon request.
	.3	When unforeseen or peculiar safety-related hazard, or condition occur during performance of Work, follow procedures in place for Employee's Right to Refuse Work in accordance with Acts and Regulations of Province having jurisdiction and advise Departmental Representative verbally and in writing.

1.4 HAZARDOUS.3Maintain written inventory of all hazardousMATERIAL HANDLING.3materials kept on site. List product name,
quantity and storage date.

- .4 Keep MSDS data sheets on site for all items.
- 1.5 PETROLEUM, OIL .1 Comply with Federal and Provincial laws, <u>AND LUBRICANTS</u> .1 Comply with Federal and Provincial laws, regulations, codes and guidelines for the storage of fuel and petroleum products on site.
 - .2 Do not place fuel storage tanks and store fuel or other petroleum products within a 30 metre buffer zone of watercourses and wetlands. Do not fuel or lubricate equipment within this 30 metre buffer zone. Obtain approval from Departmental Representative of acceptable location on site for fuel storage and equipment service.
 - .3 Do not dump petroleum products or any other deleterious substances on ground or in the water.
 - .4 Be diligent and take all necessary precautions to avoid spills and contaminate the soil and water (both surface and subsurface) when handling petroleum products on site and during fuelling and servicing of vehicles and equipment.
 - .5 Maintain on site appropriate emergency spill response equipment consisting of at least one 250-litre (55 gallon) overpack spill kit for containment and cleanup of spills.
 - .6 Maintain vehicles and equipment in good working order to prevent leaks on site.
 - .7 In the event of a petroleum spill, immediately notify the Departmental Representative and the Canadian Coast Guard (CCG) at 1-800-565-1633 (24 hour report line). Perform clean-up in accordance with all regulations and procedures stipulated by authority having jurisdiction.

- 1.7 WATER QUALITY (Cont'd) .2 Where work may affect the water quality adjacent to water intake lines used by Lobster Holding Facilities, Fish Processing Facilities and other harbour users, schedule work in cooperation with the Harbour Authority as directed by Departmental Representative to minimize interference and impact to harbour users.
 - .3 Visually monitor the water turbidity of the surrounding areas adjacent to the work and up to the established dredge limit of 200 metre. .1 Should excessive change occur in the turbidity beyond the dredge limit which differs from existing conditions of the surrounding water bodies, such as a distinct color difference; notify the Departmental Representative to obtain appropriate mitigation measures to be followed.
 - .4 Water quality during suction dredging: .1 Minimize out-fall of the dredge material at the disposal site by placing the pipeline outfall at or near the water level surface. .2 Restrict vessel traffic adjacent to the disposal site to an absolute minimum to avoid the re-suspension of dredged material from propeller wash.

.5 Water contamination by preservative treated wood: .1 Preservative treated lumber and timber, whether plant or site treated shall be cured

whether plant or site treated, shall be cured for a minimum of 30 days from date of the treatment application before their installation in areas which will be in contact with the water. .2 Do not cut treated wood lumber over the

surface of a watercourse or wetland.
.3 Do not use liquid applied preservative
products over the surface of a watercourse or
wetland.

.4 Wood treated with Chromate Copper Arsenate (CCA) or Ammoniac Copper Zinc Arsenate (ACZA) must be CSA or AWPA approved. .5 Do not use timber and lumber treated with creosote, petroleum and pentachlorophenol for any part of the Work.

1.9 BIRD AND BIRD .6 (Cont'd) HABITAT (Cont'd) .1 Do not disturb nest site and neighbouring vegetation until nesting is completed. .2 Minimize work immediately adjacent to such areas until nesting is completed. .3 Protect these areas by following recommendations of Canadian Wildlife Service.

1.10 FISH AND FISH.1Be aware of the risk for contamination of the
fish habitat at the site as a result of alien
species being introduced in the water.

environment.

.2 To minimize the possibility of fish habitat contamination, all construction equipment which will be immersed into the water of a watercourse, or has the possibility of coming into contact with such water during the course of the work, must be cleaned and washed to ensure that they are free of marine growth and alien species.
.1 Equipment shall include boats, barges, cranes, excavators, haul trucks, pumps, pipe lines and other all miscellaneous tools and equipment previously used in a marine

.3 Cleaning and washing of equipment shall be performed immediately upon their arrival at the site and before use in or over the body of water.

.4 Conduct cleaning and washing operations as follows:

.1 Scrap and remove heavy accumulation of mud and dispose appropriately.

.2 Wash all surfaces of equipment by use of a pressurized fresh water supply.

.3 Immediately follow with application of a heavy sprayed coating of undiluted vinegar or other environmentally approved cleaning agent to thoroughly remove all plant matter, animals and sediments.

.4 Check and remove all plant, animal and sediment matter from the all bilges and filters.

.5 Drain standing water from equipment and let fully dry before use.

Contractor to submit proposal of dyke construction to Departmental Representative for approval prior to commencing. Carry out work as per Environmental .7 requirements. .8 The supply and installation of a floating boom surrounding the work area throughout the duration of the work to prevent any floating debris from escaping the waters. Any debris beyond the floating boom will be removed from the waters immediately by the contractor. Disposal of treated timber: the cost for .2 handling, transportation and disposal of the un-reusable existing treated timber and debris from the existing structure to an approved regional landfill site will be paid by the tonne of material disposed for measurement purposes. Included in this item is the cost for the tipping fee to dispose of the waste material at the approved disposal site. Contractor will submit a copy of the receipt from the disposal facility. 1.4 WASTE REDUCTION .1 Develop waste reduction strategy for work. .2 Structure program to prioritize actions, with

- waste reduction as first priority, followed by salvage and recycling effort, then disposal as solid waste.
- .3 Identify materials and equipment to be:
 - .1 Salvaged for resale by Contractor.
 - .2 Sent to recycling facility.
 - .3 Sent to waste processing/landfill site
 - for their recycling effort
 - .4 Disposed of in approved landfill site.

DFO/SCH New Boat Ramp Structure 503 Cap des Caisie, NB P/N 722234		CONSTRUCTION/DEMOLITION WASTE MANAGEMENT & DISPOSALSection 01 74 21 Page 32018-03-23
1.4 WASTE REDUCTION (Cont'd)	. 4	Reduce construction waste during installation work. Undertake practices which will minimize waste and optimize full use of new materials on site, such as: .1 Use of a central cutting area to allow for easy access to off-cuts; .2 Use of off-cuts for blocking and bridging elsewhere. .3 Use of effective and strategically placed facilities on site for storage and staging of left-over or partially cut materials (such as plywood, dimension timber, etc) to allow for easy incorporation into work whenever possible avoiding unnecessary waste.
	.5	Develop other strategies and innovative procedures to reduce waste.
1.5 MATERIAL SOURCE SEPARATION PROCESS	.1	Develop and implement material source separation process at commencement of work as part of mobilization and waste management at site.
	.2	Provide on-site facilities to collect, handle and store anticipated quantities of reusable, salvageable and recyclable materials.
	.3	Establish methods whereby hazardous and toxic waste materials, and their containers, encountered or used in the course work are properly isolated, stored on site and disposed in accordance with applicable laws and regulations from authorities having jurisdiction.
1.6 DISPOSAL REQUIREMENTS	.1	Dispose of waste only at approved waste processing facility or approved landfill sites by authority having jurisdiction.

DFO/SCHCONSTRUCTION/DEMOLITIONSection 01 74 21New Boat RampWASTE MANAGEMENT & DISPOSALPage 4Structure 503Cap des Caisie, NB2018-03-23P/N 7222342018-03-23

- 1.6 DISPOSAL REQUIREMENTS (Cont'd) .2 Contact the authority having jurisdiction prior to commencement of work, to determine what, if any construction waste materials have been banned from disposal in landfills. Take appropriate action to isolate such banned materials at site of work and dispose in strict accordance with provincial and municipal regulations.
 - .3 Collect, bundle and transport salvaged materials to be recycled in separated categories and condition as directed by recycling facility. Ship materials only to approved recycling facilities.
 - .4 Sale of salvaged items by Contractor to other parties not permitted on site.
- 1.7 REMOVAL .1 Remove in their entirety all materials and objects specified for removal including all fastenings. Carefully remove materials designated to be reused.

PART 2 - PRODUCTS

Granular Backfill: to consist of hard, 2.1 Materials .1 durable, quarry or pit run material of an approved quality. The material will be free from frost, snow stumps, weeds, sod, roots, logs, silt, organic material, garbage, or any other waste materials and must be capable of being compacted to degree as specified herein and meeting approval of the Departmental Representative. Material to be uniformly graded having a stone size between 75 to 200 mm (R5 random rip-rap) on any dimension. Slate, sandstone or shale rock will not be accepted. Specific gravity not less than 2.65 when tested to ASTM C127-12 (AASHTO T85-14). Gradation to meet NBDOT 'R5' Random .1 Rip-Rap limits as follows:

ASTM Sieve size	<pre>% passing</pre>
220 mm	100
190 mm	70 - 90
150 mm	40 - 55
70 mm	0 - 15

.2 Granular Base and Sub-Base:

.1 Granular Base rock, clear, hard durable, angular, crushed quarried rock aggregate free from silt, clay lumps, organic matter, foreign substances and free from splits, seams or defects. Specific gravity not less than 2.6 when tested to ASTM C127-12 (AASHTO T85-14).

.2 Gradation to be within following limits when tested to ASTM C136-06 and ASTM C117-13 and giving a smooth curve without sharp breaks when plotted on a semi-log grading chart.

.3 Gradation - Granular Base:

ASTM Sieve Size	% Passing
31.5 mm	95-100
25.0 mm	81-100
19.0 mm	66-90
12.5 mm	50-77

PART 3 - EXECUTION

- <u>3.1 INSTALLATION</u> .1 Place geotextile material by unrolling in orientation, manner and locations indicated and retain in position with securing pins and washers or weights.
 - .2 Place geotextile material smooth and free of tension stress, folds, wrinkles and creases.
 - .3 Overlap each successive strip of geotextile 600 mm over previously laid strip.
 - .4 Pin successive strips of geotextile with securing pins as recommended by manufacturer.
 - .5 Protect installed geotextile material from displacement, damage or deterioration before, during and after placement of material.
 - .6 Replace damaged or deteriorated geotextile to approval of Departmental Representative .

DFO/SCH	HOT MIX ASPHAL	I PAVEMENT	Section 32 12 16
New Boat Ramp			Page 1
Structure 503			
Cap des Caisie, NB			2018-03-23
P/N 722234			

PART 1 - GENERAL

- <u>1.1 Description</u> .1 This section specifies requirements for supply, hauling, placing, shaping and compacting hot mix asphalt concrete paving as shown on drawings.
- <u>1.2 Source Sampling</u> .1 Inform Departmental Representative of proposed source of aggregates and provide access for sampling.
 - .2 If requested, at least 1 week prior to commencing work submit samples of following materials proposed for use.
 .1 One 5 litre container of asphalt cement.
 - .3 If materials have been tested by an independent testing laboratory within previous 2 months and have successfully passed tests equal to requirements of this specification, disregard above instructions and submit test certificates from testing laboratory showing suitability of materials for this project.
- 1.3 Measurement for .1 Asphalt pavement as shown will be measured in <u>Payment</u> .1 Asphalt pavement as shown will be measured in square meters (m2) of asphalt concrete incorporated into the work. Payment will include all equipment, labour and material to complete the work as shown.
 - .2 The supply of asphalt cement, tack coat will not be measured for payment but considered incidental to the work.
 - .3 Apply the base course(s) of asphalt pavement as required in 63.5 mm minimum compacted thickness followed by a top seal coat of 38mm minimum compacted thickness.

DFO/SCH	HOT MIX ASPHALT PAVEMENT	Section 32 12 16
New Boat Ramp		Page 2
Structure 503		
Cap des Caisie, NB		2018-03-23
P/N 722234		

PART 2 - PRODUCTS

- 2.1 Materials .1 All materials to meet the New Brunswick Department of Transportation (NBDOT) specification for asphaltic concrete. Asphalt cement to ASTM D946, performance grade PG 58-28. Mix type D.
 - .2 The Contractor will supply previous test results of the proposed materials for review and approval.
 - .3 Submit job mix formula to Departmental Representative for approval. Design of mix to meet NBDOT specification. Do not change job-mix without prior approval. Should change in material source be proposed, a new job-mix formula to be provided to the Departmental Representative.

PART 3 - EXECUTION

- 3.1 General .1 Requirements for the plant and equipment used and the mixing, transportation, placing, compaction and rolling of the materials to meet NBDOT specification unless otherwise indicated or directed.
- 3.2 Preparation .1 Reshape granular bed as required to attain proper drainage as directed. .1 Place asphaltic concrete to depths, widths and lines indicated or as directed by the Departmental Representative . .2 An average thickness of 100 mm of asphalt (2 lifts) will be placed over the new granular base material.
 - .2 The contractor will need to match the new grades with the existing asphalt. Mill existing asphalt to accomodate new asphalt.

DFO/SCH New Boat Ramp Structure 503 Cap des Caisie, NB P/N 722234		HOT MIX ASPHALT PAVEMENT	Section 32 12 16 Page 3 2018-03-23
3.3 Placing	.1	Place asphaltic concrete to d lines indicated or as directe Departmental Representative.	-
	.2	The maximum thickness of asphalt to be placed per lift is 63.5 mm. The finish elevation of the asphalt over the existing pavement on the ramp should have a uniform surface as much as possible.	
3.4 Finish Tolerances	.1	Finished asphalt surface to b design elevation but not unif low.	
	.2	Finished asphalt surface not irregularities exceeding 5 mm with a 4 m straight edge plac direction.	when checked
	.3	Finish surface smooth, true t following tolerances: .1 Base Course: 7mm in 3m. .2 Seal Course: 3mm in 3m.	o grade to
3.5 Defective Work	.1	Correct irregularities which completion of rolling by loos and removing or adding materi	sening surface mix

- and removing or adding material as required. If irregularities or defects remain after final compaction, remove surface course promptly and lay new material to form a true and even surface and compact immediately to specified density.
 - .2 Repair areas showing checking or hairline cracking.
