

## Innovative Solutions Canada Program

### Challenge EN578-170003/06 : Night Vision Ergonomics Enhancement

#### Attachment 1 Question and Answer #1

This document contains questions and answers related to this challenge.

##### **Question #1:**

I request some guidance as to exactly what you're looking for as the description allows multiple interpretations.

Option 1: Is to utilize the current Night Vision Goggle I2 tubes and to repackage and mount them to address the issues highlighted in the description

Option 2: Propose alternative technologies to I2 that when designed into a helmet mitigates the issues highlighted in the description.

##### **Response #1:**

The intent with this challenge is to seek the development of technology solutions that will generate the desired outcomes as described in the "Desired outcomes & considerations" section, without prescribing any particular technology or approach. Thus, potential solutions could range from improvements to an existing concept or system (as stated in option 1), to completely new technology and concepts (as stated in option 2). The degree to which the Bidder has demonstrated that the proposed solution advances the state-of-the-art over existing technologies will be considered during the evaluation.
