AMENDMENT 003

The purpose of this amendment is to publish questions and answers regarding this request.

Questions and Answers:

Questions and answers 1 to 6 are part of the Amendment 001 published previously.

Questions and answers 7 to 9 are part of the Amendment 002 published previously.

Q10: In reference to Annex A "Requirement", section 3.5:

"3.5 The system must have a heat exchanger for heating and cooling the solution."

The request is for a heat exchanger to heat and cool down the solution. If a jacket on the 200L tank is used to heat and cool down the solution, is it acceptable?

A10: No. The term "solution" refers to the product that circulates, not the product in the tank.

Q11: In reference to Annex A "Requirement", section 3.3.1.2,

"3.3 The system must have two (2) sections:
3.3.1 Section 1:

3.3.1.2 Section 1 must have a system for managing the permeate pressure and flow rate for each membrane."

This refers to a system for managing the pressure and flow rate for each membrane. Therefore, the three microfiltration permeate exits must return independently to the 200L tank and have their own flow rate meter for a total of three?

A11: As described in annex A for **section 1** (three (3) membranes simultaneously and independently), the requirement is for a system for managing the pressure and flow rate of the permeate only. For **section 2** (7 membranes simultaneously) the requirement is for a system managing the pressure and flow rate of the permeate and retentate.

Q12: For the samplers, are they syringe samplers?

A12: Yes, this is an acceptable option.

Q13: We can use pneumatic valves (automatic). Is it this option required or can we use manual valve?

A13: No we require pneumatic valves (automatic).

All other terms and conditions remain unchanged.
