

## PART 1 - GENERAL

- |                                    |    |                                                                                                                                                                                                                                                           |
|------------------------------------|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <u>1.1 DESCRIPTION</u>             | .1 | This section specifies requirements for supply and placing stone rip-rap for erosion protection at locations and to dimensions indicated.                                                                                                                 |
| <u>1.2 MEASUREMENT FOR PAYMENT</u> | .1 | <u>Rip-Rap</u> : Supply and placement of stone rip-rap, including the cost of all plant, labour, equipment, and materials required to complete the work as specified, will be considered incidental to the dredging price.                                |
|                                    | .2 | <u>Core Stone</u> : Supply and placement of core stone, including the cost of all plant, labour, equipment, and materials required to complete the work as specified, will be considered incidental to the dredging price.                                |
|                                    | .3 | There will be no measurement for payment for salvage, stockpiling, and placement of existing rip-rap as noted on the drawings. Include all costs for salvaging, stockpiling, and placing existing rip-rap in a lump sum price for demolition and removal. |

## PART 2 - PRODUCTS

- |                    |    |                                                                                                                                                                                                                    |
|--------------------|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <u>2.1 RIP-RAP</u> | .1 | Hard, dense with relative density (formally specific gravity) not less than 2.65, durable quarry stone, free from seams, cracks or other structural defects, to meet following size distribution for use intended. |
|--------------------|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

- .2 Rip-rap stone to be well graded with maximum sizes not exceeding 700 mm on any side and minimum size of not less than 500 mm on any side.
- .3 Supply rock spalls to fill open joints.
- .4 Field stones of appropriate sizes are acceptable for hand placed rip-rap.

## 2.2 CORE STONE

- .1 Hard, dense with relative density (formally specific gravity) not less than 2.65, durable quarry stone, free from seams, cracks or other structural defects, to meet following size distribution for use intended.
- .2 Core stone to be well graded with no fines with maximum size on any side of 500mm.

## PART 3 - EXECUTION

### 3.1 PLACING

- .1 Place rip-rap as directed to thickness and details indicated or as designated by Departmental Representative.
- .2 Where rip-rap is to be placed on slopes, excavate trench at toe of slope to dimensions as indicated.
- .3 All side slopes to be 1 vertical to one and 1.5 horizontal.
- .4 Fine grade area to be rip-rapped to uniform, even surface. Fill depressions with suitable material and compact to provide firm bed.

- .5 Place stones in manner approved by Departmental Representative to secure surface and create a stable mass. Place larger stones at bottom of slopes.
- .6 Hand placing:
  - .1 Use larger stones for lower courses and as headers for subsequent courses.
  - .2 Stagger vertical joints and fill voids with rock spalls or cobbles.
  - .3 Finish surface evenly, free of large openings and neat in appearance.
- .7 Place core stone as directed to limits as indicated.

END OF SECTION
