This solicitation amendment is hereby issued to address a question posed by industry.

Question 1:

Is the requirement for supply and installation of shaft corrosion protection between the liners included in this tender?

Answer 1:

The requirement is for the supply of new bronze liners only. The supply and installation of shaft liner protection will be part of the installation specification to be done by a separate contract.

Questions 2:

Is CCG able to specify what the hydrostatic testing requirements (pressure and duration) are for the CCGS S.W. Laurier - Shaft Liners (F7049-180057/A) tender?

Answer 2:

1. The bidder must clearly show in their bid that they have communicated with their selected member of the IACS, that is recognized by Transport Canada, and that they know all the requirements which that Class Society will require, including pressure testing and dimensions of test coupons, and what must be witnessed by the attending inspector. For centrifugal cast liners the test material is taken from the ends of the casting.
2. The proposed foundry must be already approved by the selected Class Society for production of centrifugal castings for ship propulsion shafting.
3. At a minimum the castings must be hydrostatically tested for 1 hour to 2 Bar (29 PSI), in accordance with the DNV Rules for Classification of Ships Part 4 Chapter 4, rules section B 800 Propeller Shaft Liners: <https://rules.dnvgl.com/docs/pdf/DNV/ruleship/2013-01/ts404.pdf>
4. The bidder's selected Class Society may require a higher pressure test.

All the terms and conditions of the solicitation remain the same.
