Under Annex "A", 1.12 of Minimum Mandatory Requirements

Asks "Unit must have a beam width of at least 10"

Question #1: The "beam width" phrase in above sentence implies that you require a line shaped beam. We can offer a machine with a circular shape beam. The diameter of this circle can be 10".

This circle shape beam have lots of benefits with respect to a line shape beam, including no hot spot at the beam end point, exposing every point of the surface two time as it moves past an area which results in faster cleaning. Please clarify if a laser cleaning system with circle shape beam is acceptable?

Answer #1: Yes, the beam may be circular with a diameter of at least 10".

All other terms and conditions remain the same.
